IF the Brownsville Case is now at last actually closed, and *if* we are to accept the many times repeated official declarations that the colored troops really did shoot up the town—(I am underscoring both ifs, Mr. Printer)—then should we not all pause a few moments, before we dismiss the affair wholly from our minds, and contemplate with wonder and admiration the marvelous exhibition of race loyalty which those dismissed colored soldiers have given us in the complete success of their alleged "conspiracy of silence"? Only think of the long series of investigations, and examinations, and cross-examinations, by their own officers, by army inspectors, by United States Senators, by hired detectives, and finally by an expert board of retired generals—and yet no individual soldier has been found guilty, or even under sufficient suspicion to be put on trial for murder or any offense whatever! For three years and a half the resources of the United States Government have been exhausted in shooting up, so to speak, the Twenty-fifth Infantry, with a view to bagging some individual guilty game—and with absolutely no success whatever. And why? Because, we are told, of the guilty conspiracy of silence by which scores of these soldiers, if not most of them, knowing the facts, have agreed to protect their guilty comrades. Not one of them has "peached." Not one of them has wavered in his testimony or betrayed in voice or look that he was guilty or knew who was; or, if he has, he has furnished no sufficient clue for bagging some individually guilty game. Apparently no inadvertent word has been dropped at any time when the men were off their guard, or any suspicious conferences of little groups been detected, that might lead to discovery. No one has been deterred by threatened disgrace and loss of valuable emoluments for himself and his family from remaining faithful to the conspiracy of silence even to the bitter end.

Surely this was race loyalty, whatever else it was—and have not we white people been telling the negroes that they should be proud of being negroes and stick together and stand by one another? It may not have been "loyalty to loyalty" as Josiah Royce has defined it; but it was certainly loyalty of that subordinate kind which he has taught us to admire when we charitably refrain from judging too critically the causes to which our neighbors give their loyalty. And no one can deny that it is a loyalty which—even if misdirected in the present case—is capable of being turned to account, when rightly directed, for the development of a high type of citizenship.

Therefore, if we must at last accept the theory of a conspiracy of silence on the part of the colored soldiers, let us not refuse to give it that measure of discriminating praise which it certainly deserves for its complete success in the face of almost overwhelming probabilities that it would not succeed.

One thought, however, still lingers: Suppose, after all, the colored troops did not shoot up the town, and it should be shown that other persons did who, in a more or less drunken condition, would have been more likely to do so, and, either with forethought or afterthought, wish to put it off on the soldiers. Can we say that this possibility has ever been investigated with the same unrelenting earnestness as the other, or with any earnestness at all? At the cost of withdrawing our qualified praise for the loyalty of the soldiers to one another and the marvelous success of their conspiracy of silence, some of us still find it easier to believe that it was not so wonderful, after all, but that they told the simple truth when they all declared, "We are not guilty."

Brookline, Mass.

Literature

A Modern Chronicle

In his latest book* Mr. Churchill has proved that he can change the scenery of his mind without that literary creaking which often accompanies an author's departure from his accustomed type of fiction. It is not a chronicle of modern politics personified in a State boss with a stuttering drawl, or in a June-bug youth buzzing to become a politician, but it is the intimate story of a woman's life told as simply as if the writer were some sadly wise friend inscribing the diary of an unwise friend.

Mr. Churchill is not a believer in abstract demonstration of problems. He gives them arms, legs, and minds with or without temperament, places them in relation to each other, and thru some social chemistry fuses them into a product which forms the final problem of his story. So in this chronicle there are five animate problems which merge at last into the inclusive one of divorce. Honora has inherited, along with her good blood and poverty, a taste for the beauties and luxuries of life—a taste which is not merely appreciative, but is intensified by the desire for possession. She becomes the epitomized representative of feminine yearning for prosperity, social success and happiness, constrained only by the iron grip of breeding from vulgar admission of her weaknesses. When a wealthy young New York broker appears as a lover he spells not love, but an establishment, with all the appertainments, on a fashionable street. She marries him and discovers too late that he is not an arrived but a coming business man, and that her establishment is to be a flat in a dull suburb. For a time she is caught in the glue of domesticity, but finally she pulls away and they move into a pseudo-fashionable neighborhood. There she meets one of those flirtatious wasp men who stings her imaginative and highly organized nature into active dissatisfaction with her social position, and into a veiled but growing disillusionment of her husband. Uncongenial marriages have been very prevalent in fiction recently, but few authors have succeeded in showing so well the nature dust that temperament throws up. Honora, good and beautiful, but unstable, begins to feel the strain of a dully complacent husband who wears pink shirts on his mind as well as his body, and hence cannot distinguish between feminine nerves and a smoldering domestic tragedy. So, when wealth and then impregnable social position come to Honora, she finds that she must still accomplish happiness. To such a character happiness does not take the form of content, but of insurgent emotion. Then in the course of time she discovers that she is really in love. The fact of her marriage impedes her but a passing moment. She mutinies against society, obtains a divorce, and immediately marries Hugh. So far as character goes he is but her masculine counterpart in this impetuous pursuit of happiness.

In the few remaining pages the real problem of the book emerges. Two people of good blood and of good society have violated the laws of blood and society. The latter throws them off as waste material and they must perforce become a world unto themselves. And the curious thing about love is it never quite compensates for shame and the lack of human intercourse. Hugh practically commits suicide and Honora goes abroad. If there is a mistake in this chronicle it comes in the conclusion, when Honora, fagged by a satiety of happiness and misery, still beats against the shutters of experience and agrees to marry the good man of the book, who has hovered like a guardian angel over her during the changing years of her life. But whatever criticism may be passed upon the heroine's last snatch at happiness, Mr. Churchill has given us a possible modern version of an Adam and Eve who have eaten of a forbidden fruit and been cast forever from the Eden of normal, clean society.

*A Modern Chronicle. *By Winston Churchill.* New York: The Macmillan Company. $1.50.

Dionysius of Halicarnassus on Literary Composition. Being the Greek text of the **De Compositione Verborum,** edited with Introduction, Translation, Notes, Glossary, and Appendices. By W. Rhys Roberts, 12mo, pp. xiii, 358. New York: The Macmillan Co.

Professor Roberts has taken for himself a subject that ought to be of interest to all students of literary style. Greek rhetoricians were much devoted to the study of style, and the Romans followed them. The Greek writers have been less familiar to readers than are Quintilian and Cicero, but the latter depended much on their Greek predecessors. Professor Roberts has previously published "Longinus on the Sublime," the "Three Literary Letters of Dionysius of Halicarnassus," and "Demetrius on Style," each of the three volumes with the Greek text and the translation, and with full notes and glossary; and now he has crowned this labor with the same service for *Dionysius on Literary Composition.* To the Greek expert this will be a choice treasure, as the text has been carefully revised from the manuscript sources, while the notes and glossary are all that could be desired. But we also gladly and warmly commend the volume to the student of English style, for the translation, on the page opposite the Greek, is admirably given in good English, which breaks up the long Greek sentences into crisp and clear vernacular. What gives the study of Dionysius special value is the fact that it is devoted to a special department of rhetoric much neglected by English writers. It is concerned not with such matters as clearness, logical order, introduction and peroration, with which Dionysius has nothing to do, but with the arrangement of words and clauses so as to make the structure of the sentence flowing and beautiful, by the proper collocations of sound and quantity. We all know, or those who write with art know, that prose has its own rhythm, its cadences, its music, as truly as does poetry. What is it that makes one writer's style vulgar and pedestrian, while that of another is easy and graceful? The words may be no more choice in the latter case, but there is a deftness in their order, so that a sentence or a strophe closes as surely as a bar in music. What is it exactly that makes the difference? There are few, if any, that can tell the secret. Yet it must be a matter for scientific investigation. This secret is what Dionysius tries to reveal. He treats of pleasant and harsh consonants and vowels, of pleasant and harsh combinations of them in words, of the conjunction of words for pleasant utterance, and of the succession of long and short syllables in the sentence to produce a rhythmic effect, and all without the rhythm of poetry. He then illustrates his principles by examples from Homer, Herodotus and Demosthenes, who are masters of the art of composition, with other illustrations of various styles of excellence, or of faulty diction. Happily he includes a poem of Sappho, otherwise lost, with other familiar or else unknown citations. The student will understand that the author's observations are very suggestive for English composition, or are applicable to it, *mutatis mutandis;* for the effect of Greek quantity—which English hardly knows—appears in accent, which is the basis of English meter. We heartily commend this volume to the student, who will find in the notes not a few examples from English writers which illustrate the principles discussed.

Through Library Windows. By F. C. Hubbard. New York: Broadway Publishing Co. $1.25.

It is good for the soul to live in or visit a country house where the library is the heart of the home and the garden one of its rooms. It is pleasant, too, to be entertained by a gentle host, who loves both, and sitting by the open window looks out upon a homelike close, hedged in by greenery and full of those heavenly summer guests, the flowers, while he discourses quietly of the world of books, rows of which stand silently about him, attentive to every word! Such are his friends, of so fine a quality; birds, flowers, trees, brooks, skies, pictures and books, that we reverence the man because of his high companionship, and measure him by what he most values.

Through Library Windows, a volume of essays upon just such themes, while

in no way remarkable, has the charm of genuine enthusiasm for Nature in its more peaceful aspects. Nature domesticated and tamed to a dooryard docility, and the taste for books and art indoors. It is a quietly friendly book and restlessness of spirit never peeps out of its pages with flaming or questioning eyes.

Women in Industry. By Edith Abbott. New York: Appleton & Co. $2.

In this volume Miss Abbott has made a careful, scientific contribution to the ever-present woman question. She has examined the history of women in industry in America, and has furnished a basis of fact for some conclusions about woman's struggle for economic independence and sex equality. "Women must work for wages," she agrees. "There is no other access possible for the self-respecting woman to that flow of wealth which is at once the product of the labor and the source of satisfaction for all members of the community." When factories were first established in America women were warned by moralists and economists against "eating the bread of idleness" in their homes. Every pamphleteer lectured them upon the beautiful advantage of taking a paid part in the country's work. Woman had been the industrial worker in the colonial period, when men were mostly agriculturists, and spinning, weaving, sewing and baking were all pursued in the home. After the industrial revolution woman must follow her work into the factory. It therefore did not occur to anybody of importance that "woman's place is the home." That discovery was made only when a flowing tide of immigration made "hands" a-plenty, and men, timid men, feared there would not be work enough to go round. "Any theory that women are a new element in our industrial life, or that they are doing 'men's work,' or that they have 'driven out the men,' is a theory unsupported by facts." In the cotton industry and in the clothing trades men are doing work which for the most part was once done by women. In the printing trade and in the manufacture of boots and shoes women are doing some work which a century ago would have been done by men. But the men have gained more places than the women. Only the efforts of the professional women to realize pecuniary independence belong to recent history. The woman of the working classes finds her industrial opportunity about the same as her grandmother did. "The woman movement of the last century," insists Miss Abbott, "belongs almost exclusively to educated women. And the fruits of the long struggle of that century for 'woman's rights' have gone, almost exclusively, to the women of the professional group." How stupid and unfair it would be, therefore, if women in America should follow the example of some of their English sisters and ask for votes only for women of property. If distinctions were to be made, women wage-earners and women who do their own housework should first be enfranchised.

The Development of Religion. A Study in Anthropology and Social Psychology. By Irving King, Ph. D. Pp. xxiii, 371. New York: The Macmillan Company. $1.75.

Dr. King makes in this volume a valuable contribution to the new and growing literature of the psychology of religion. The work that he has undertaken differs from that which has already been done by Prof. William James in his investigations into the psychology of religion, in that it is not an examination of the phenomena of religious life in order to correlate these with other mental processes. Nor is it an attempt to discover an essential content of religion, and then to trace the working out of this content in creeds of all varieties. Dr. King goes more boldly into the question than has been done by his predecessors —by Davenport, Cutten, Starbuck or Delacroix. He goes to the heart of the subject—into the nature of the material of religious consciousness and the question whether this material or content is to be dealt with under the general laws of consciousness. In other words, Dr. King aims to prove that the religious life of man is a part of his normal life, and that consequently the laws of psychology apply to religious consciousness just as truly as they do to states of consciousness which are recognized as belonging to ordinary terrestrial life. The most

striking result of Dr. King's research is the great respect that he has acquired for men of what we term the lower races. As regards intellect, morality and religion, Dr. King places even the savage tribes on a far higher level than we have been accustomed to associate with them. The primitive thought and life of the savage, according to Dr. King, are not due to any inferiority to civilized man in memory, abstraction, inhibition, or mechanical ingenuity; but to the difference in stimulating conditions or opportunity. "A man of the white races," he writes, "stands on a vast objective accumulation of culture or the products of intellect. He can do complicated things with intricate machinery because there is a complicated mechanical environment to stimulate him." As in the mental life, so in the moral and religious. Dr. King shows that according to the most reliable observers of the Australian natives, these peoples whom we class as among the lowest races show every quality that we consider moral. The native adheres as strictly to rule and law as does the average white man. The difference is not in self-control; the power of inhibition, self-sacrifice, obedience or the sense of duty; but simply in the code which has grown up in the tribe to which he belongs—a code which is due to the circumstances in which the tribe has been placed.

Success in Music and How It Is Won. By Henry T. Finck. With a chapter on Tempo Rubato, by Ignace Jan Paderewski. New York: Charles Scribner's Sons. $2 net.

The popular music critic of the *Evening Post* calls his book "a sort of symposium, in which many of the world's greatest singers, pianists, violinists and teachers tell the secrets of their success." It is an extensive collection of anecdotic sketches of successful musicians, most of whom Mr. Finck has known personally, interspersed with an abundance of more or less critical comment, deduction and interpretation, all written in a facile and readable style. A section of nearly a hundred pages, under the general heading of "Teachers, Parents and Pupils," contains a deal of good, practical advice: Hints to teachers on "where to locate," how to get pupils and how to keep them; hints to parents on how to choose a teacher and other important things; and, best of all, many suggestive and helpful hints to pupils, including a sapient exposition of the axiom that the short cut to success "lies in substituting *brain work* for hand work and throat work."

From the Book of Life. Poems. By Richard Burton. Boston: Little, Brown & Co. $1.25.

A joy forever is a good poem, one that does not irritate the ear, one that arrests the thought, one that fits in with experience of the nobler siftings, one that is cheerful, inspiring, kindling. How few they are, and yet how many are the aspirants after the honors of the lower shelf in our home libraries—the shelf nighest the elbow of the easy chair! Some such poems are to be found in Richard Burton's little volume, *From the Book of Life*. Fifty-six poems, all brief, none of them on other than commonplace themes, yet all treat the commonest theme with a freshness that makes the theme acceptable for the side-lights thrown upon it. "Surely," one says, "precisely that facet of the old diamond has never before been turned on me." And all is done by the use of the right word rightly placed—that is, so placed as to sing in perfect harmony with its immediate neighbors. How difficult is that training of words to sing in perfect harmony! Burton has the art in a high degree. The words do sing together. Clear as a bell is the logic of his method; no straining for effect, and the effect so much the better for the absence of apparent effort. The vocabulary, moreover, is simple enough, the words old enough, yet never worn out. He never tries a startling word, but all the same the vocable used catches and excites, and, if one stops to think of it, the music of it rejoices the mind as well as the ear.

Memorials of St. Paul's Cathedral. By W. M. Sinclair. Philadelphia: G. W. Jacobs & Co., 1909. $4.

A great part of the history of England may be read in the story of St. Paul's. Dr. Sinclair has wisely, with such a bewildering wealth of incident and association at his command, made

his volume on the Cathedral of London not an essay such as Stanley's masterly history of Westminster, or the memorial of Canterbury, but a chronicle, interspersed with many extracts from the picturesque history by Dean Milman, and from the annals of earlier days, from Fox, and Clarendon, and Pepys and Evelyn. The plates with the text give an excellent idea of the ancient building, towering over the old city. With its mighty walls went, in the fire of 1666, the wonderful portico built by Inigo Jones, and the priceless library, treasures for which even the masterly work of Christopher Wren can hardly compensate. The story of Sir Christopher Wren himself is one of the especially interesting chapters. The verger's diary, running thru the latter half of the last century, is not only a vivid account of contemporary events, but it is a fine human document in which a faithful worker's devotion to his task, his tenderness for the great building under his care, his enthusiasm in all that pertained to it, show beneath his terse statements of daily incident. The light-weight English paper, the many and excellent cuts prepared by Mr. Louis Weiter, the scholarly treatment of the entire subject, make the book a delight thruout its full five hundred pages.

Christianity: Its Nature and Its Truth. By Arthur S. Peake, D. D. New York: Thomas Y. Crowell & Co. $1.25 net.

In the conviction that there is widespread interest in matters of religious belief, and that many will welcome a simple and popular exposition of doctrines now chiefly controverted, Dr. Peake of the University of Manchester, England, has prepared a defense of the moderately orthodox opinion on dogmas most commonly assailed. He writes in a reasonable spirit, not undertaking to substantiate more than is sensible. His style is clear and straightforward, suited to general and ready apprehension. Some of the topics treated are: "What is Religion?" "Why I Cannot be a Materialist," "Is There a God?" "Can we Trust the Gospel Portrait of Jesus?" "The Supernatural Birth of Jesus," "The Divinity of Christ." While Dr. Peake is not at all impervious to modern light, one finds in his discussions a much more orthodox view of miracle than is contained in Dr. Gordon's recent book. His chapters on strictly doctrinal subjects, such as Sin and the Incarnation, are more convincing than those which treat questions of literary and historical criticism. The field covered is much larger than in many American works of the same design, and the ground is canvassed more thoroly.

Speeches of William Jennings Bryan. Two Volumes. New York: Funk & Wagnalls Co. $2.

With commendable modesty Mr. William J. Bryan declined to include any of his own speeches in a collection of "The World's Famous Orations," and virtue is rewarded by the issue of this collection of his notable utterances. Mr. Bryan has been a national teacher on many topics, a peripatetic professor of politics, morals, religion, literature. Specimens of all his styles are included, from the oration which first made him a presidential candidate, thru remarks on "Gray's Elegy" and "To His Neighbors," to sermons on "The Prince of Peace" and "The Price of a Soul." Both admirers and critics admit that his description of "Lincoln as an Orator" is true of himself: "He possessed the two things that are absolutely essential to effective speaking—namely, information and earnestness." It is too soon to judge whether any of his speeches will finally rest among "The World's Famous Orations," tho many of the multitudes who have been enthralled by the magic of his tuneful voice, his sincere thought and his noble sentiments would place some of them now in that position of honor. Those who have heard Mr. Bryan on the rare critical occasions when the orator has still his great opportunity have crowned him with laurels. Then the power of character, of gesture and of personality is added to the argument. The thrill which the St. Louis convention felt passes again over the sympathetic reader today, as recalling the dramatic circumstances, he scans: "You may dispute whether I have fought a good fight, you may dispute whether I have finished my course, but you cannot deny that I have kept the faith."

Literary Notes

....There have been several popular accounts recently of the English versions of the Bible, but no one has told the story more interestingly or carefully than Rev. Samuel McComb, D. D., in *The Making of the English Bible* (New York: Moffat, Yard & Co., $1 net). Dr. McComb covers the ground from Tindale to the Revised Versions, and takes special pains to do justice to the beauty, power and influence of the Vulgate and the Roman Catholic translations. He has the gift of comprising many facts in small compass without making his narrative a dry chronicle.

....Miss Chambers's handy volume on the English Constitution (*A Constitutional History of England,* The Macmillan Company, $1.40) is really a welcome contribution to a literature that would seem at first glance to be already overcrowded. It is the first attempt to put within reasonable compass and in untechnical language a systematic and well balanced account of the historical development of English government. The plan of presentation followed by Miss Chambers is that made famous by Professor Medley; she has not adopted the chronological method, but has taken each topic up separately and brought it down to date. A foundation is laid in feudal antiquities, and then the Crown, Parliament and Judiciary are treated in order. That this method has its disadvantages there is no doubt, but, taking the method for granted, Miss Chambers has done a useful piece of work. It has no competitor, and will find a place as a text-book in many colleges where the instructors are vacillating between the antiquated Taswell-Langmead and the overburdening Medley. The fact that the narrative of each section brings us right up against present practice will give a double value to those more interested in the budget of 1909 than in the antiquarian researches of Madox. There is only one thing that an American need grumble about, and that is the repetition of the outworn tradition that the English Constitution is unwritten, while ours is to be found in a document. Anybody who has followed the recent careers of the Honorables Cannon, Aldrich, Payne and Dalzell knows that our government is by no means described in the venerable muniment of 1787.

Pebbles

THE closed season for mollycoddles is over. —*New York Evening Post.*

WE notice no rumors of Uncle Joe and Aldrich hurrying to Europe to meet Roosevelt. —*Atlanta Journal.*

THE surest way to attract attention just now is suddenly to take the next steamer to meet Mr. Roosevelt.—*Springfield Republican.*

THE only question now is whether Colonel Roosevelt will abolish the House of Lords or merely reform it.—*New York Evening Post.*

ALL those who don't care whether Miss Croker is Mrs. Breen or not will please signify in the usual manner . . . Hush! You deafen us!—*The Evening Mail.*

SUGGESTION for sweet girl graduates, and also for the long-legged boys in the same class: Beyond the Alps lies Roosevelt. (P. S. —"Lies" in this instance indicates location, and nothing short and ugly.)—*Atchison Globe.*

HEY, Diddle, Diddle,
The Sphinx and the Riddle,
The lion jumped over the moon;
The whole world was stirred
At a dollar a word,
And our Teddy is coming home soon.
—*Saturday Evening Post.*

THE other day (it is not well to be too definite), a restaurant man down at Atlantic City was opening oysters. He had every right to do this. It is the oyster season and oysters grow at Atlantic City. You will observe that the local color is *au fait.* While he was thus engaged he opened the most valuable oyster ever opened in that famous seaside resort. In it he found fifty-four matched pearls. They were all perfect spheres. The restaurateur refused a large sum for his pearls and orders for them are still arriving by every mail. If he had only found them a few days ago Mr. Drexel would undoubtedly have purchased them for his bride. The finder will now have the pearls set in a brooch and keep them among his family jewels to be worn by his wife on state occasions at Atlantic City. The story is interesting, very interesting. Great is the American press.

WHEN T. R. MEETS THE KAISER.

First, Wilhelm will start with an army review,
Drawn up on a smooth rolling plain,
And T. R. will give him in ten million words
My regiment's conquest of Spain.

Then Wilhelm an orchestra big will conduct
In manner exceedingly slick,
And T. R. will follow by showing the way
A person should wield the big stick.

'Tis certain that Wilhelm a sermon will preach,
While T. R. will tell how it feels
At last to discover the Decalogue old
On nothing but banquets for meals.

Fierce deer and dread rabbits and maneating birds
Will fall in a faunal affray,
And babies and frazzles and bully and hoch
Will fill up the gaps of the day.

Their autographed photographs they will exchange,
And part with their souls all attune;
The dachshund will laugh to observe such a sight,
That the cow will jump over the moon.
Judge.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Federation of the World

We print elsewhere in this issue Theodore Roosevelt's address on "International Peace," delivered last week before the Nobel Peace Committee, at Christiania, Norway. Its importance can hardly be overestimated, for it comes at a time when all Christendom is groaning under the excessive weight of armaments, and when the nations are seeking substitutes for war in the development of Hague courts and conferences. Mr. Roosevelt's address is nothing less than a plea for the Federation of the World. Not since the "Great Design" of Henry IV of France, proposed at the beginning of the seventeenth century, has one who has represented a great people ever promulgated so comprehensive a plan for universal peace.

We are pleased to remember that in our editorial of February 17, entitled "Mr. Roosevelt at Christiania," we pointed out the unparalleled opportunity before our ex-President to hunt for bigger game than he had yet met since he left our shores. We suggested that, inasmuch as he has penetrated the philosophy of arbitration farther than any living ruler, and has already said that "effective arbitration necessitates agreements between all the Powers to respect each other's territory and sovereignty, and to arbitrate all other questions," it was fitting that he should urge the nations to negotiate treaties with such guarantees. We also remarked that our Supreme Court furnishes the model to be followed in the development of the Hague court, and, in fine, that the Constitution of the United States is the key to the establishment of the United Nations. Pending such a universal world federation, we thought that a League of Peace, based on force if necessary, would be a long and practical step in the right direction.

It will be seen how we have anticipated Mr. Roosevelt's appeal. But for a practical statesman of his prestige and power to promulgate such views is more far reaching than the editorial utterance of any periodical. It shows that at last the peace movement has entered practical politics, and from henceforth is destined to become the great political issue before the nations.

Now, what does Mr. Roosevelt propose? He proposes a world federation limited to the maintenance of peace, composed of those great civilized nations which are sincerely desirous of peace and willing to use force if necessary to preserve it. This is a thoroly practical suggestion, and has been urged before, especially by Mr. Carnegie and Mr. Bartholdt. Even José B. Ordonez, ex-President of Uruguay, at the second Hague Conference made a similar suggestion in his official capacity as first delegate of his country. Curiously enough, there is a bill at the present moment pending before Congress to the same effect.

It resolves that a commission of five members be appointed by the President of the United States, the duties of whom shall be:

> First: To urge upon the attention of other Governments the fact that relief from the heavy burden of military expenditures and from the disasters of war can best be obtained by the establishment of an international federation;
>
> Secondly: To report to Congress, as soon as practicable, a draft of articles of a federation limited to the maintenance of peace, through the establishment of a court having

power to determine by decree all controversies between nations and to enforce execution of its decrees by the arms of the federation, such arms to be provided to the federation and controlled solely by it.

Thirdly: To consider and report on any other means to diminish the expenses of Government for military purposes and to lessen the probabilities of war.

This bill should be passed. The creation of such a commission would be a guarantee to our own people, as well as to the peoples of the world, that the United States is in earnest and ready to take the lead in the only practical and promising method of obtaining international peace. There is little enough time before the third Hague Conference convenes in 1915 for such a commission to visit and sound the chancelleries of the world and report back some practical plan to serve as the basis for the action of the American delegates at the third conference. The chief trouble at the first and second Hague conferences was that the delegates came there more or less unprepared. A commission originating in the popular branch of Congress and appointed by the President would remedy this defect. Moreover, it would go to the world with more prestige than a similar commission under the auspices of the State Department alone. And why should not Theodore Roosevelt himself be made chairman of the Commission? He believes in the plan, he is the best known and esteemed American abroad, he has the prestige, energy, ability and youth. Does not the last clause in the last sentence of his Nobel address indicate that he would feel compelled to accept an appointment for such a service? He says: "But the ruler or statesman who should bring about such a combination [League of Peace] would have earned his place in history for all time and his title to the gratitude of all mankind."

Emanuel Kant has written that we can never have universal peace until the world is politically organized, and it will never be possible to organize the world until the majority of the nations have a representative form of government. The history of the United States is a demonstration of the truth of this. Public sentiment has already passed the stages of conciliation and even arbitration. It is now ready for world federation. Will the United States, therefore, take the lead? The time is ripe. We have the prestige. We have also the man.

King Edward VII

THE sudden death of the King of the United Kingdom of Great Britain and Ireland, and Emperor of India, the Colonies, Protectorates and Dependencies, has created consternation all thru his royal realm, and to a less degree thruout the empire. His death is regarded as a great calamity.

The intensity of this feeling might seem strange to us, who well know that as a ruler he is almost wholly shorn of responsible power. His authority is almost nothing in legislation or in the administration of law; only his Ministers are responsible. Compared with the King of England, the President of the United States is almost a despot. King Edward, or equally his revered mother, could not in the slightest way appear before the people even to advise as to the passage of any proposed bill. President Taft cancels engagements elsewhere and remains in Washington that he may use his influence to secure the success of his policies, the passage by Congress of the bills which he has drawn up and recommended. King Edward could make no recommendations; he was, under the British Constitution, a silent spectator, in theory a puppet, to be moved as the Prime Minister, supported by a single House of Parliament, might direct. When Prime Minister Asquith the other day intimated to Parliament what, in a certain eventuality, he would ask the King to do, he was roundly abused for introducing the Throne into the case. The government of the Empire is said to be by the Crown; but the Crown does not mean the crowned head, but the Cabinet, that is, at present, Mr. H. H. Asquith, Mr. D. Lloyd-George, Mr. John Burns, and seventeen other men of more or less important positions. What they say the King says. What Parliament votes he signs.

Then why this consternation? It is in some part human nature, which makes the most of a mysterious, in-

herited, age-long dignity, even after its force is past, and in part from the fact that King Edward had a high reputation for political shrewdness, international influence and extraordinary tact. He was no sacred character so long as he was simply Prince of Wales. Then his follies were freely criticised, but as soon as he ascended the throne all was silenced. Perhaps, like Prince Hal, he left behind him all his youthful weaknesses and became the social model of his people. From that time no criticism has attached to him. By all classes, even the most democratic, the Socialists, he has received most loyal support. Ministers might be abused, but the King never.

And he was a wise monarch. With no named political power he has been a real power. His influence has been great to keep peace in Europe. The royal intermarriages are an element for peace. His advice to Premiers has been of weight, for he remained while Cabinets came and went. He understood as no sovereign before him has understood them, the duties that belonged to him as King, and he performed them fully. At his accession he promised to keep up the high standard set by his mother, and he did so. He was, during these nine years, the best King England has ever had, as Victoria was the best Queen. Her influence and his have been potent to give Great Britain the purest court in the world.

Queen Victoria died under the shadow of the South African War; and King Edward died amid the anxieties that attach themselves to a serious reform of the British Constitution. Much depended, to popular belief, on the wisdom, in this crisis, of the King. No doubt this anxiety worried and perhaps weakened him. That responsibility falls on his successor, George V.

A King is an anomaly, as a House of Lords is an anachronism. In these days there is no reason for either; therefore the British people, except for the show of kings and lords, as democratic as the United States or France, has deprived their King of all but the pretense of power, and will soon do the same for the House of Lords. George V, of an ominous name, may give it a needed luster. He is a young man of serious purpose, faithful to all duties; unlike his father, almost a Puritan in his habits, not a lover of sports, one who has a mind of his own, and is able to speak his own mind well without depending on speeches written for him. But whether he has his father's native tact is not known, and he certainly lacks the late King's wide knowledge of statecraft. He comes into power at a perilous period, and political parties will watch him with the utmost jealousy.

History will give Edward VII great praise for his diplomacy. He found Great Britain in "splendid isolation" among the Powers of Europe; he has left it buttressed with ententes and alliances with all Powers except Germany. The explanation of this exception may be found in the resentment felt by Edward toward Kaiser William for his treatment of his mother, King Edward's sister. Long did he delay any official visit to Berlin. Germany resented the isolation into which she was being put, and enormously increased her navy, directed solely against England. Possibly Edward's death may make easier the effort to persuade Germany to consent to a limitation of the increase of armaments. For this reason Mr. Roosevelt's suggestion is most timely and perhaps hopeful.

The influence of King Edward was a personal, not an official, one. There was no place for a weak monarch; but Edward was wise, tactful, and his Ministers trusted and gave him scope. He did not fail them or worry them, as Kaiser William has worried his Ministers. His reign gave glory to the British Empire, and we believe that George V will prove worthy of the succession. His brother Edward's death has given him the throne, and he will, we believe, make his people glad that the line of the Georges is not ended.

Bishop Paret's Disappointment

THE Protestant Episcopal Bishop of Maryland was going to Rome, and he wished to have a private interview with the Pope. It was natural that he should seek a letter of introduction from Cardinal Gibbons; in fact, he got several to the Catholic officials, but the audience

was refused, and Bishop Paret is said to have been told that the Pope is neither a picture nor a statue. This raises several questions. That he was told so officially we do not believe.

In the first place, why should the Protestant Episcopal Bishop of Maryland desire a private audience with the Pope, and why should his neighbor in Baltimore, the Cardinal, be willing to give him such a letter? We do not imagine that the Bishop was a prospective convert; if he had been, he would have got the audience quickly enough. He could have hardly had any special message or information to give the Pope; that could have been given to the Cardinal Secretary of State. It is enough to say that probably he holds the Pope in honor and simply wished to see him and pay his respects and tell him how much he longed for the unity of Christendom. Of course, that would not help unity, for it has been settled that the Anglican Church has not the true episcopal succession; but it might be a pleasure to the Bishop to see His Holiness and——no, he would hardly tell him that the Episcopal Church has laid away in innocuous desuetude the statements in its Thirty-nine Articles that "the Church of Rome hath erred, not only in their living and manner of ceremonies, but also in matters of faith"; that "the Romish doctrine concerning Purgatory, pardons, worshiping and adoration, as well of images as of relics, and also invocation of saints, is a fond thing, vainly invented, and grounded in no warranty of Scripture, but rather repugnant to the Word of God"; and that transubstantiation "is repugnant to the plain words of Scripture, overthroweth the nature of a sacrament, and hath given occasion to many superstitions." No; he would not have reminded the Pope of these little differences.

Well, then, why should Bishop Paret have asked and Cardinal Gibbons have given these letters of introduction? It was almost certainly for social reasons. Probably in no other city in the country are the wealthy and aristocratic families, Catholic and Protestant, successors of Lord Baltimore's settlement, so genially interlaced by marriage. This social *melange* it would not be wise for either the Cardinal or the Bishop to disturb; indeed, the Cardinal may very well have said that it must be a weak Church, lacking in faith, that would not expect to gain rather than lose by such intermarriages. Those are famous Catholic families, the Jenkinses, whose fifty-seven boys were in the Confederate army; the Lees (the Virginia Lees are Protestant), the Carrolls, Jamiesons, Spaldings, Boones and Harpers; and it is well for Bishop Paret to keep on good terms with them. For the same reason Cardinal Gibbons was quite willing to give Bishop Paret courteous letters of introduction, and to ask even that he might receive a private audience, but we do not conclude that he feels "snubbed" or personally disappointed that the requested favor was not granted. To the Pope Bishop Paret was no more than any other Protestant, and why should he not come with the crowd of fifty or sixty others that receive a promiscuous audience and blessing?

But the reply currently reported as explaining the refusal calls for some consideration. His Holiness "is neither a picture nor a statue," but of all men on the face of the earth he is the one who more than any picture or statue attracts the curious or the devout. To the desire to meet a man in high station kings and presidents and even the Pope have to submit. They have to be, at proper occasions, "on show." For Rome the Pope is the chief attraction. But for this fact the Italian Government would not have left him the dignity and glory of the Vatican. We have heard the amount of money spent by Americans in Rome every year for pictures, antiquities, villas and palaces and other things estimated at from thirty to a hundred millions. The hotel keepers and merchants who will secure you, for twenty liras, admission to a public audience with the Pope, would never allow him to be driven from the city. And these visitors are not by any means all gaping Americans. Last week a company of Belgian pilgrims were presented and brought generous Peter's Pence, which the Pope told them should be expended in the repair of a church venerated by Belgians. It supports Roman workmen; and the Abbot Janssens took occasion to tell the pil-

grims how meekly he submits to the Papal rebuke. Even the Socialists, the Freemasons and the Jews hold the Pope and his presence too rich an attraction to be given up. They may look on him as an antiquity, like the Coliseum, but they value him all the same; while to the thousands who come each year to pay their veneration, he is the earthly center of their religious faith, the human representative of Christ for his Church. We do not believe that Bishop Paret wished to see him out of mere curiosity, as he would see Michel Angelo's "Moses," but as the representative of the great Roman Catholic Church, a Church to which so many of his Maryland friends belong.

Again we say that we do not believe that any such brusque reply to the Bishop's request for an audience was authorized. It sounds quite too much like that other rude remark falsely reported as coming from the Vatican about Mr. Roosevelt. We may at least be assured that its language will be dignified, whether in approval or condemnation.

Tufts (m.) and Jackson (f.)

LAST year, in discussing the expulsion of women from Wesleyan University (Vol. LXVI, pp. 494, 648, 810), we foretold similar action on the part of Tufts College and we specified as one of the grounds for our expectation that Phi Beta Kappa was being "practically monopolized by the weaker sex." President Hamilton confirms our view of the difficulty by giving this among the reasons which have led the trustees to take action to found a separate college for women to be known as Jackson College. The paragraph is worth quoting in his own language, for its unprofessional frankness and curious wording:

"The tendency of women is to enter courses in which from the nature of the subject and their natural aptitude and ability they will secure high marks, coupled with the general desire of women for high marks. This secures to the women students a higher average standing than the men, and consequently a rather disproportionate part of the awards, prizes, and prestige which under co-education are always awarded in common for both men and women. It was admitted that the presence of women served slightly as a stimulus to the men, and the sentiment was quite generally expressed that their presence on the hill had served to help the tone of the community —had exercised a sort of refining influence on the men."

The same complaint comes from the union men in the shops. They demand the dismissal of the pacemakers. Their employers, however, unlike university authorities, are not disposed to grant these demands. Race prejudice often springs from a similar root. In some Eastern universities anti-Semitic feeling manifests itself particularly when the lists of the winners of scholarships and other competitive honors are bulletined. In some of the Northwestern universities we hear the complaint "There is no chance of our getting anything so long as these confounded Swedes are after it." Evidently the patrons of early American colleges knew what they were about when they founded scholarships to be awarded to boys by the name of "Adams" or "Smith," so long as these should present themselves. The superior American stock has a hard time of it whenever it comes into free competition with the offspring of "the offscourings of Europe."

The objections raised to the presence of women in the universities by their male classmates are much the same as are raised against the presence of women in the offices by their fellow clerks; they work too hard, they work too cheap, they work too faithfully; they do not drink, they do not smoke, they do not "take part in athletics" by betting on the games. One of the deans in the University of Chicago has gone so far as to propose that since the women do not spend their time in intercollegiate athletics and other "student activities," they should be required to do extra work in their studies to secure the same degree.

It should be remembered that President Hamilton is talking about the College of Liberal Arts, that is, about those studies such as Greek, mathematics and the natural sciences which the men of a former generation denied to their women, not because they feared competition, but because they believed that such studies were beyond the capacity of the feminine intellect. Now it appears from the quotation given above that President Hamilton holds the theory that these same studies are now being sought by the women because they are easy and avoided by the men, not because they are

easy, but because they are sought by the women. To save the College from "imminent disaster," as the president puts it, separate classrooms, laboratories, etc., are to be built, when the money is forthcoming, but strange to say the new woman's college is to be altogether manned by men, with the exception of the dean and gymnastic instructor, and, still stranger, these men teachers are to give the same lectures in the two colleges. So it is evidently not an educational differentiation which is aimed at but a social segregation. This is a striking indication of the fact that our colleges generally are becoming more social than educational institutions.

The extent to which the two sexes can commingle socially and vocationally depends upon the time and place. It is a measure of the degree of civilization and morality to which the community has advanced. It is the chief glory of America that we have been able to carry further than elsewhere, the fundamental principles of freedom of association and equality of opportunity. Our men and women from youth up share a common intellectual life, and have the same moral standards to a greater extent than any other nation. In France, for example, the training of the two sexes is so different that they hardly are on speaking terms when they marry. The husband may be a libertine; his bride is cloister-bred. He may have a broad education; she may have a narrow range of interests. He may be an infidel; she may be a bigot. Under such circumstances every marriage is a *mésalliance* and all the children are the offspring of miscegenation.

If we go further, say to Turkey, we find the woman a mere creature of the harem, idle, sensual, and ignorant; and the man—well, the man is a Turk. If we descend still lower into barbarism, the woman is a squaw and the man a brute. They have a different vocabulary; they are not permitted to eat or handle the same things; they are kept apart by innumerable taboos.

In this scale of social development each community must find its level in accordance with the folkways there in vogue. But it seems to us that the reintroduction of an artificial system of segregation must always be regarded as a step backward and we believe it to be unnecessary in the case of Boston. The action of Tufts is not so injurious as that of Wesleyan, for the closing of the latter institution makes it impossible for a woman to get a collegiate education in the State of Connecticut. Even if Tufts should not carry out its promise of an equal establishment there are other institutions for women, and Boston University still holds to its fundamental policy of coeducation. This principle was so well stated in the "First Yearbook of Boston University," in 1873, and is so apposite to the present that it may well be recalled:

> "Class schools are very well in their place. Schools for the Feeble-Minded, Reform Schools, Schools for Deaf Mutes—no one should object to these. So if any class of philanthropists feel called upon to organize special schools for girls or boys constitutionally too delicate to bear the nervous shock of school association with the other sex, let no one oppose. Such institutions may serve to illustrate the tender and gentle charities to which our Christian civilization gives origin. But a university exists for altogether different purposes. . . . To artificially restrict the benefit of such an institution to one-half of the community, by a discrimination based solely on a birth distinction, is worse than un-American. It is an injury to society as a whole, a loss to the favored class, a wrong to the unfavored."

The Tariff and Costs of Production

WE have been saying in THE INDEPENDENT for some time past that the Administration, if it desires to conciliate the tariff insurgents, in and out of Congress, without openly repudiating the revision which it has warmly and unwisely commended, should insist upon a prompt inquiry by a competent commission concerning the costs of production here and abroad, and should say that it seeks, by means of the information thus to be acquired, to shape the tariff in conformity with the national platform.

Now, owing to the influence of the President, and because of the menacing protests of hosts of Republican voters, the "regulars" of the Republican majority in Congress, the men who are responsible for the recent revision, have consented to provide for a commission clearly empowered to make such an inquiry.

It will be remembered that the President never accepted the narrow construction of Senator Hale and others of the law creating the present Tariff Board. He insisted that the law permitted, if it did not distinctly authorize, an investigation as to costs of production. Recently he asked for $250,000 to be expended for the work of the Tariff Board, or Commission, mainly in this field. In the House, last Friday, the Committee on Appropriations reported a paragraph in one of the large supply bills not only granting this sum but also distinctly giving authority for an inquiry to ascertain whether the present tariff duties are in accord with the platform declaration. We quote this paragraph, the enactment of which will be a long step forward in the tariff legislation of the United States:

"To enable the President to secure information as to the effect of tariff rates or other restrictions, exactions, or any regulations imposed at any time by any foreign country on the importation into or sale in any such foreign country of any agricultural, manufactured, or other product of the United States, and to assist the officers of the Government in the administration of the customs laws, as required by the Tariff Act approved August 5, 1909, including detailed information of the cost, and of each and every element thereof, of producing at the place of production, and at the place of consumption, of all articles specified in said tariff act, *both in this country and in the country from which such articles are imported, so that the cost of all such articles produced abroad may be compared with the cost of like articles produced in this country,* the President, in the employment of persons required and authorized for such service, may appoint a Tariff Board, and he may also employ, under his personal direction, or under the direction and supervision of such Tariff Board, such competent experts in the business and methods of cost, keeping, and such clerical and other personal services, including rent of offices in the District of Columbia, traveling, and other incidental expenses, as may be necessary in the work of said Tariff Board and the work of said experts engaged in such investigations, and the compensation of all persons, whether employed permanently or temporarily, shall be fixed by the President; and to enable the President to have such information classified, tabulated, and arranged for his use in recommending to Congress such changes or modifications in any existing tariff duties as he may deem necessary to prevent undue discrimination in favor of or against any of the products of the United States, $250,000."

Mr. Tawney, the committee's chairman, explaining this paragraph, remarked that the present rates might not in some cases represent the declared principle of Republican protection. Those who are familiar with such investigations as were made by Carroll D. Wright know that in many cases they do not, that many duties greatly exceed the difference in production costs. The paragraph is not perfect, and probably it will be improved; but as it stands it gives the needed power and provides for an inquiry which must profoundly affect tariff legislation hereafter.

Certain members who profess to represent the Democratic minority assert that all the Democrats will oppose this paragraph. Why? Because the power to obtain the information and to use it in recommendations is given to the President. It is suggested that he would make a biased and unjust selection of facts to be transmitted to Congress, withholding many that might seem harmful to his party. We hope the statements of this kind that have been published do not correctly indicate the attitude of the Democrats. They should heartily support the proposition. As for the President, we believe he can be trusted to send to Congress any and all facts ascertained which show the need of a readjustment of duties to fit the difference in costs of production. We think this must also be the belief of the Democrats themselves.

Fifty Years Ago

It was fifty years ago that the late King Edward, then the boy Prince of Wales, visited this country. What impression he made, what hearty welcome was given him, what warm love was aroused for the mother country, and what prayer for long union between Old England and Young America, can be judged from the leading article in The Independent of October 18, 1860, written by Harriet Beecher Stowe:

Let us have our word—just one of what every paper is full of. The Prince has been here; has danced, supped, been fêted—bought pearls at Ball & Black's, and been to Barnum's Museum—done New York, in short.

There has been the usual amount of fervor and faming. All the acute symptoms of the lionizing fever have developed themselves in all sorts of foolish pranks worthy of people a little out of their heads.

But, after all, setting these things aside as inevitable to human folly, the visit of the Prince to the States is a deeper and wider thing than it appears at first to be.

It is not merely the generous and kindly boy—in the kindliest and most interesting period of opening life—but it is an embodiment, in boy's form, of a glorious related nation, of whose near kindred America has every reason to be proud. *England* herself, with all her old historic honor—with garments woven in memorial threads from the looms of Milton, Spenser, Bacon, Shakespeare—comes modestly walking by our doors in the form of a boy just in the fresh morning of his days—modest, simple, kindly—the good son of a good wife and mother—and it is something to make the tear start to see how quickly the American heart felt the pulsation of relationship, and the veneration for the dear old kindred blood of fatherland, and the proud remembrance of centuries of united Anglo-Saxon history, when as yet the young American oak lay a hidden germ in the leafy bosom of the grand old English mother.

Every door has been ready to fly open to this young heir of our and their past history, and by courtesy to place the soil of this great new English world as a carpet beneath his feet, and such a generous impulse is not to be confounded with mere snobbishness or toad-eating vulgarity. There is a healthy respectable tone and body to it, and its kindly effects may reach far into the vista of future years.

We like the old Shakespearean way of denominating kings by the name of their kingdoms. This youth should be announced among us as *Young England,* and every heart should devise welcomes, in which enthusiasm should know no bounds but those of delicacy and propriety.

How much better such greetings between two noble kindred nations than the old family quarrel, all whose remembrances should now be grown over with the green harvests of advancing union and Christian civiliatizon.

One thing is not forgotten: that at the feet of this Young England, American citizens have laid that deep and chivalrous homage with which they have always regarded womanhood enthroned in the form of his noble mother.

Americans, of all the earth, are celebrated as women-worshippers. Not among her own subjects has the exceptional history of the Girl-Queen called to so proud a throne, met with more sympathetic responses or generous admiration and interest.

One smiles sometimes to read how every American who devises something new or splendid in his own eyes, forthwith consults with himself how to send a specimen thereof to *Queen Victoria*—whether it be an extra barrel of hams, or a mammoth cheese, or a set of Temperance Tales, or what not—but, after all, does not this show the place her womanhood holds in the American mind, and the loyalty of heart with which every man of our country acknowledges her ladyhood? Traditions of her kindly nature, of her good sense and discretion of the exemplary manner in which she had discharged her domestic duties, making her family life an example for her kingdom—all such stories have found a ready ear and believing heart in America, and therefore the more willingly is much accorded to the son of such a mother.

For the youth, it is due to him to say that he has stood a difficult ordeal, with a right British simplicity and good sense.

A thousand foolish things might easily have been said or done, but we recollect not one. He has been calm, steady, neither too much nor too little excited, but borne himself right worthily of his name and race.

God bless him, and grant long union between Young England and Young America!

The Storm and the Crops

The sweeping storm that covered the whole country destroyed several millions' worth of fruit, to say nothing of the enormous injury to the cotton crop. It went down with its blizzard fingers as far as the Gulf, and took in the northern counties of Florida. The millions lost cannot be replaced in the fruit sections, but more or less cotton will be replanted. We have, however, to discount the loss greatly by the fact that it will give remunerative prices for the fruit that is left. New York State saved nearly all its peach buds, and this will go far to compensate the sweeping out of the Georgia and Missouri crops. A warm March is never to be welcomed—only it does feel good after a hard winter. But when was there ever a disaster that did not involve more or less of the beneficent, and was not capable of being overruled by intelligence, honesty and industry? With choice apples at 10 cents each in the New York market, and good Baldwins bringing $7 per barrel, the fruit grower cannot complain in anticipation of another short year; it is the consumer of fruit who must look ahead without pleasant anticipation. Are we ever again to have the apple as everybody's fruit? Even the comfortable old barrel is going out of style; and we are expected to buy apples in boxes, at $3 per box of ninety, or 40 cents per dozen. Enough growers have received such prices for their selected fruit to make the consumers open their eyes and wonder what high prices will yet come to mean.

Pensions for the Civil Service

There are more bills than one now before Congress for a civil service pension for employees in the classified civil service, and there is some chance that such a bill may be enacted into law. That introduced by Mr. Goulden provides for a pension of from 40 to 75 per cent. of the average salary for the last five years, according to age and period of service, and that no such employee shall be retained after the age of seventy years. Such a plan would give economy as well as efficiency to the departments. Secretary MacVeagh, on taking charge of the Treasury, immediately made investigations as to a more economical conduct of its business, and found that some millions of expenditure could be saved. The first obvious point of saving was in the personnel. It was found that hundreds of employees are incompetent by reason of age or other disability, but it seemed cruel to displace them so long as there was a likelihood that a civil pension law would be passed as recommended by the President and Secretary MacVeagh. A pension plan is really economical, and this is the reason why twenty-one railroad systems in the country have adopted it, and they have 674,259 employees in line for pensions, and a multitude of industrial establishments are doing the same, just for profit. It promotes faithful service, and it retires decently those whose age makes them less efficient, so that a smaller force is needed. The plan would now allow about 5 per cent. of the employees to retire, and we believe that Congress should speedily adopt the system.

Dr. Grenfell to Commander Peary

It is not a bad answer which Dr. Grenfell, missionary to the Eskimos, gives to Commander Peary. The discoverer of the Pole had said that he hoped the Arctic Highlanders will never be Christianized. He wanted them left in their picturesque savagery; and Dr. Nansen had said much the same thing. They are afraid that Christianity will spoil and kill them. Dr. Grenfell says "it is no great compliment, even to the most primitive of mankind, to consider them unable to survive the advent of true Christianity." Dr. Grenfell thinks that the advent of a true missionary is no more dangerous to them than is that of a strange vessel with a heterogeneous crew of sailors, or even of the unselfish and generous class of explorers; and Dr. Grenfell knows. It is peculiar to most explorers and ethnologists that they look on undeveloped tribes as scientific curiosities to be kept as if in a museum, preserved for study, and not as human beings to be developed and made the most of. The explorer or ethnologist visits them for his own glory, that he may exploit them as specimens to be described; why should he object if the missionary visits them and lives with them that he may make them better, perhaps as advanced as the explorer himself? They are human beings like the wise ethnologist; and the desire to keep them ignorant, savage, degraded, when they might become intelligent, civilized and Christian, is inhuman and cruel.

Polygamy in Mormondom

The *Salt Lake Tribune* tells an extraordinary story of the prevalence of polygamy still among the Mormons of Utah. The plural marriages are often celebrated at the Mormon colony in Mexico. The names are given of a hundred persons who have plural wives, many or most of whom have been taken since the Woodruff manifesto with its revelation forbidding polygamy. Yet the Mormons protest that polygamy is dying out fast; that the old polygamists may not have put away their wives, but no new ones are allowed to be taken. It is a fact that new polygamous relations are entered into with caution, which is something, but high officers in the Church become polygamists or assist in plural marriages. The list given includes many bishops and elders. It will be remembered that Utah was admitted into the Union only on condition that polygamy was to come to an end, and it is now forbidden by the State laws as well as by the Woodruff manifesto, but it was silently allowed that those who had previously entered into polygamous relations should not be interfered with, but that the practice would die out if no further plural marriages were cele-

brated. These fresh cases may be comparatively few, but they are numerous enough to prove that the law is not enforced, and that Mormonism has not genuinely reformed its doctrine, otherwise dozens of officials could not be allowed to be polygamists.

A small local newspaper printed some sharp criticisms of the political activity of Mrs. Senator Hale, of Maine, whereupon her son went to the editor's office and laid a whiplash on him. But was it his mother's honor that he defended? The editor takes nothing back, and the assault has given the knowledge of the criticism of his mother to the whole country instead of to just a few hundred or thousand readers in Maine. It looks to us that it was his own reputation for honor that he was defending, and that his mother has gained nothing by it, while he has sought and gained a certain reputation for filial honor. This is what a religious paper in Boston, owned by an Archbishop, says of Mr. Hale's horsewhipping the editor:

"Bravo! Mr. Hale. The honor of a mother is a sacred thing, as dear to a real man as his life. If all men were like Mr. Hale there would be less of this prying into the private and family affairs, less of those shameless exposures of innocent and modest persons before the gaze of a public which loves to play the part of 'peeping Tom.'"

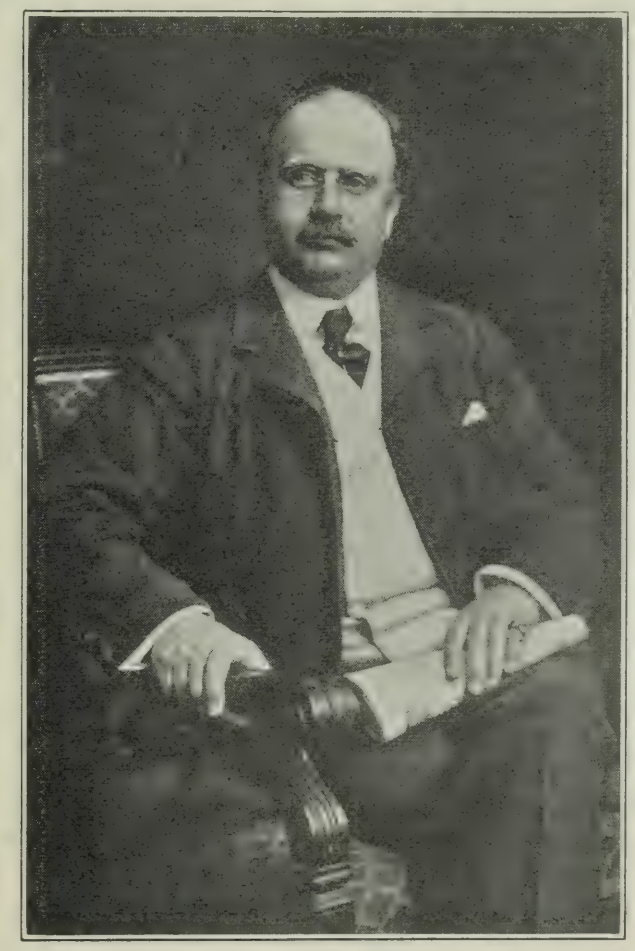
And if there were more such editorials as this there would be more lynchings and murders.

Governor Hughes was unanimously confirmed to be a Justice of the Supreme Court. Not a Senator, not even Senator La Follette, voted against him. But one voice is raised in protest, that of William J. Bryan. He says that Governor Hughes vetoed the two-cent railroad bill, and opposed the income tax amendment, and thus proved himself "in close sympathy with the exploiting corporations." Thus he concludes:

"Governor Hughes exemplifies the individual virtues and naturally demands honesty in the public service, but he is a shining illustration of that peculiar type of citizen developed in this country during the present generation—the citizen who, personally pious, opposes vice and is a punisher of small crimes, but shows no indignation at the larger forms of legalized robbery."

There were some rather large insurance corporations which he did not show himself very tender to; and President Taft would trust his fairness on any question that might arise, even on the income tax.

Senator Lorimer, of Illinois, who was elected by a non-partisan vote of Republicans and Democrats, altho himself a Republican, must just now be finding his seat rather uncomfortably hot for him. It is already proved by confessions that a number of men were persuaded to vote for him by a bribe of $1,000 or more each. The cleaning in the Illinois Legislature is as sensational as that in the New York Legislature; and in this case the crimes are so recent that no statute of limitation will protect the guilty. Men are confessing, as in Pittsburg, to escape punishment. But who paid the money? Who bought the necessary votes? That is the question.



We know we ought to mourn most for the death of fifteen hundred people by the terrible earthquake which has destroyed Cartago, the beautiful capital of Costa Rica, but somehow it is the destruction of the Palace of Peace, built by Mr. Carnegie, that most affects us. There is no special sentiment about the people, but there is a peculiar sentiment attaching to that building which embodies the will of the five little and quarrelsome republics to live in peace and settle their difficulties by conference or arbitration. That building was for the Central American republics what the Peace Palace at The Hague is for the world. Fortunately Mr. Carnegie has sent a wireless message from mid-ocean saying it shall be rebuilt.

Let any of our readers who have any interest in the use of soothing syrups, soft drinks, cough lozenges, etc., write to the Department of Agriculture at Washington for a recent published bulletin on the subject. It will give the names of dozens of these remedies, showing that they contain cocaine, morphine, codeine, chloroform, chloral and other most dangerous drugs and poisons. Somehow the sale of these things, such as Mrs. "Laudanum's" Soothing Syrup and not a few medicated soft drinks, ought to be forbidden by law.

INSURANCE

Home Life Insurance Company

We offer our congratulations to the Home Life Insurance Company, which was incorporated and began business on May 1, 1860, as a Brooklyn organization. It has just celebrated its fiftieth anniversary. Since beginning business it has had five presidents, as follows: 1860, Walter S. Griffith; 1872, George C. Ripley; 1890, Charles A. Townsend; 1892, George H. Ripley, and 1894, George E. Ide. During the Armstrong investigation it was one of the few companies that escaped criticism because of its close adherence to perfectly legal methods. The New York *Tribune* said regarding this company at the time: "The Home Life supplied one of the marvels of the present investigation—an insurance company without any obvious scandal." The management of this concern is conservative, and, while the company is not classed among the giants, it nevertheless does a constantly increasing business. During the first year of the company's history there was issued in new business $1,101,000 and death claims paid of $3,000. The premium income was $33,600. According to the statement of the Home Life as of January 1, 1910, the company had total admitted assets of $23,626,018 and a surplus of $1,892,327. The insurance in force at the time of this report was $92,532,583. The total payments to policyholders by the Home Life Insurance Company since it began business have been $38,893,123. For the last sixteen years the offices of president, vice-presidents, actuary, secretary, medical director and cashier have been continuously filled by the men now in these positions. In commemoration of its fifty years of successful existence the Home Life Insurance Company has issued a neat and well illustrated volume, containing its record from 1860 to 1910. The book contains the essential facts regarding the company, together with well executed portraits of its officers. Mr. Ide, the president of the company since 1894, was born in Brooklyn on May 10, 1860. His early education was obtained at the Polytechnic Institute, in Brooklyn, and he was graduated from Yale in 1881, taking the degree of M. A. from his alma mater in 1906. His early business experience was with the firm of Dominick & Dickerman, bankers, with which concern he was associated upon leaving Yale. In 1890 he became secretary of the Home Life Insurance Company. In 1892 he was advanced to the second vice-presidency, which office he retained until his election as president. Mr. Ide is a director of the Corn Exchange Bank and of the Fidelity and Casualty Company. He is also president and one of the directors of the Larchmont National Bank. He is an Episcopalian in denomination and a Republican in politics. He is a member of the University, New York Yacht, Yale, Larchmont Yacht, Metropolitan and Automobile Club of America, all of New York; the Hamilton, of Brooklyn; the Graduates' Club, of New Haven, and the Pilgrims, of London and New York.

GEORGE E. IDE,
President of the Home Life Insurance Company.

FINANCIAL

Iron and Steel Trade

THE iron and steel industry is experiencing a reaction. A large accumulation of stocks, with declining prices, has caused a considerable reduction of pig iron output. In April the quantity produced at the furnaces was 2,483,763 tons, against 2,617,949 in March. Recent reports show that seventeen of the Carnegie Steel Company's sixty-one furnaces are out of blast and that the Corporation is about to withdraw ten more from active service. Probably the reduction for the entire industry amounts to 15 or 20 per cent. The prices of Bessemer iron are lower by 10 per cent. than they were in January. Railroad orders for steel have recently been few and small. The condition of the iron and steel trade does not necessarily indicate that the country's prosperity has been checked. The output of iron, unprecedented in volume, has been too large. Production has outrun consumption, and there must be a readjustment.

The Cost of Living

A COMMISSION appointed two months ago in Massachusetts to inquire as to the causes of the increased cost of living reports to the Legislature that the primary cause of the advance of prices since 1897 has been the increase of the gold supply; that the advance has been accelerated by "the enormous waste of income, thru uneconomic expenditure for war and national armament, and thru multiple forms of extravagance, both public and private, and of wastage, both individual and social"; that it has been promoted by a complexity of causes operating to reduce the volume and increase the expenses of production, and to extend and diversify consumption; that Trusts, the tariff, and labor unions cannot be regarded as direct and active causes of the upward movement. But the commission recommends that at the next revision of the tariff the expediency of removing all duties on food products be carefully considered, and says that constant official vigilance is required with reference to the action of combinations, especially those dealing in the necessities of life. We do not see in the list of members of the commission the name of any recognized authority or expert in economic questions. As the gold output is regarded as the primary and chief cause, and as Trust exactions and tariff duties are excluded, there is a narrow field for recommendations as to remedies. The report suggests the creation of a commission to hear citizens' complaints about injustice in distribution by combinations; another commission on market improvements which shall consider the subject of municipal slaughter houses; the encouragement of a home supply of meat products; a better distribution of immigrants in the farming districts of the State; inspection of cold storage warehouses by local boards of health; development of the trolley freight service; legislation to prevent abuses in the sale of coal at retail, and better methods of collecting and publishing industrial, commercial and sanitary statistics. Several of the recommendations (of which we give the briefest summary) indicate convictions in the minds of the commissioners with respect to one combination, the Beef Trust, which are not wholly in accord with the assertion of the report that "the higher prices of meat are accounted for by natural causes."

....At the annual meeting of the New York Chamber of Commerce, last week. J. Edward Simmons was re-elected president. A. Barton Hepburn, chairman of the exceutive committee for seven years, resigned that office and was made a vice-president. Mr. Hepburn's successor is George F. Seward.

....The inquiry of the Department of Justice, before a grand jury in New York, concerning an alleged conspiracy to control the price of cotton, now directly affects James A. Patten, the noted speculator. In the original proceeding the defendants named were Frank B. Hayne and W. B. Brown. Subpœnas were served last week in a new proceeding entitled "The United States against James A. Patten and others."

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MAY 19, 1910 No. 3207

Survey of the World

The Administration Bills in Congress

Speaking at a dinner of the Passaic, N. J., Board of Trade on the 9th, President Taft referred to the condition of prominent bills now pending in Congress and exprest his belief that the postal savings bank, anti-injunction, campaign publicity, statehood and railroad bills would be enacted. The bill granting statehood to New Mexico and Arizona, he said, had been delayed in the Senate. "There is hesitation on the part of Republicans to pass a bill which is so likely to add four Democrats to the Senate, or if not Democrats, Republicans of that radical type that is entirely out of sympathy with the more conservative notions of the East." But he expected that the bill would become a law. Enumerating the several conservation bills and explaining their provisions, he said a majority of them were not in a very advanced state. The final passage of the one ratifying the withdrawals (heretofore made) of 60,000,000 acres and empowering the President to withdraw additional tracts was imperatively demanded in the public interest. It has been passed in the House. It was possible that the others would go over to the next session. The bill for an issue of $30,000,000 of irrigation bonds ought to be passed. There was danger that the bill relating to injunctions would be made obnoxious by the addition of amendments desired by the Federation of Labor. The postal savings bank bill, as passed by the Senate, had some features which suggested danger to the public credit. He could not say how far it could be amended in the House. He expected that the bill for publicity of campaign expenditures (passed by the House and pending in the Senate) would become a law. With "that freedom of touch for which headliners and correspondents are so noted," the country had been told of the emasculation of the railroad bill. The bill had not been emasculated either in the House or in the Senate. It still contained almost all of the remedial features of the original measure, and the parts omitted were "neither substantial nor vital." The section legalizing the making of traffic agreements had been stricken out:

> "The purpose of this section was to legalize the practice that will prevail whether the law permits it or not. No one suggests the wisdom of instituting prosecutions under the Anti-Trust law to prevent this practice, and it seemed wise therefore to formulate its limitations and recognize it as lawful; but the fear that it might impair the efficiency of the Anti-Trust law in some indefinite way was so strong among some members of the Senate that it was thought wise to withdraw the section."

The section relating to mergers had also been withdrawn. The first part of it ought to be restored. He hoped to see the final passage of the bill within two weeks.——In the House, on the 10th, the railroad bill was passed by a vote of 200 to 126, the majority including all of the Republicans and 12 Democrats. An attempt to restore the merger section was defeated, 160 to 169. By a vote of 176 to 157, the Commerce Court was retained. In the Senate Mr. Aldrich and his associates had counted a bare majority for that form of the bill which the Administration preferred. On the 13th the Senate voted upon an amendment relating to long and short hauls. The House had added an amendment forbidding a railroad to charge more for a short haul than for a longer one. As about eighteen Republican Senators were intending to support this amendment, the leaders relied upon the aid of Democrats to insure the rejection of it. Learning at

the last moment that there was a menacing movement for the adoption of a more objectionable amendment and that the expected Democratic aid would not be furnished, Mr. Aldrich proposed a compromise which satisfied nearly all of the insurgents and a large majority of the Democrats. By a vote of 56 to 10 it was adopted, and among those supporting it were Senators La Follette, Cummins and Dolliver, insurgent leaders. The compromise amendment contains the prohibition approved by the House but qualifies it by permitting an exception when a railroad company satisfies the Commission that conditions and circumstances make the prohibited charges just and reasonable.——Opening the Iowa campaign in Des Moines on the 10th, Senators Dolliver and Cummins very sharply criticised the Republican leaders in Congress, asserting that they were controlled by corporations, "captains of industry and masters of high finance." Mr. Cummins named Senator Aldrich in the Senate, and "Cannon, Payne, Dalzell and others of the same type" in the House. They looked, he said, "at these vital problems from the corporation standpoint, always fearing that any step for the just regulation of the overmastering forces of our commercial life will take away some of the profits of the multimillionaires." It should be realized, he added, that the division in the ranks of the Republican party was not ephemeral. Mr. Dolliver denounced the new tariff. It is said in Washington that the breach between the President and the leading insurgents is growing wider. At his request, many Senators attended a conference at the White House last Saturday night, when the condition of the Administration bills was considered. No invitation was given to Senators Cummins, Dolliver, La Follette, Bristow, Beveridge or Clapp.

Bribery Cases

In Pittsburg, on the 14th, sentence was pronounced in the cases of several of the men who were recently convicted of bribery or who had admitted their guilt. The list was as follows:

A. A. Vilsack, formerly cashier of the German National Bank, who had pleaded guilty and testified for the prosecution, 8 months in jail and a fine of $5,000; Charles Stewart and Hugh Ferguson, formerly Councilmen, each 8 months in jail and $500 fine; Dr. W. H. Weber, formerly in the Council, 6 months in jail and $500; P. B. Kearns, formerly a Councilman, 6 months and $250; Morris Einstein, who also had been in the Council, 6 months and $2,500.

Sentence was deferred in the cases of E. H. Jennings, president of the Columbia National Bank; Frank A. Griffin, cashier of the same bank; Charles W. Friend, vice-president of the Clinton Iron and Steel Company, and ex-Councilman M. L. Swift. The execution of Governor Hughes's warrant for the extradition of Frank N. Hoffstot, president of the Pressed Steel Car Company, indicted for paying $52,500 of bribe money in the interest of three banks, was delayed by habeas corpus proceedings in New York City. After hearing argument, last week, Judge Holt dismissed the writ of habeas corpus, but granted a stay in order that an appeal might be taken.—— In Ohio, Mark Slater, formerly State Printer, recently convicted of defrauding the State, has been sentenced to be imprisoned four years. He is accused in fifteen additional indictments. —— At least one of the men indicted for bribery in connection with the election of United States Senator Lorimer, of Illinois, will soon be brought to trial.——Prosecuting Attorney Campbell, of Little Rock, will take no further steps in the cases of members of the Arkansas Legislature and others under indictment for bribery in relation to the State Capitol bill. He says the chances are fifty to one against conviction. Six Senators and two contractors were indicted for bribery, and three Senators for perjury.

The Pinchot-Ballinger Investigation

In the Pinchot-Ballinger investigation last week, the cross-examination of Mr. Ballinger was enlivened by further criticism of Mr. Brandeis (counsel for L. R. Glavis) by the chairman of the committee, Senator Nelson, who said on one occasion to him: "You may insult the witness, but you must not insult the committee." Whereupon Miss Margaret Hamilton, a lawyer, who was in the audience, cried out, "You must not insult him, either." There was an attempt to involve Senator

Piles by questions suggesting that the Senator's election had been due to the influence of capitalists interested in the Alaska coal claims, and that he had afterward urged the appointment of Mr. Ballinger as Secretary of the Interior. In the Senate, on the 11th, Mr. Piles made a statement, saying that President Taft had appointed Mr. Ballinger without consulting either himself (the Senator) or his colleague. For some time past Mr. Glavis's attorney has insisted that the summary of evidence prepared by Attorney-General Wickersham and relating to Glavis's charges was predated by Mr. Wickersham, to make it appear that it had been used by the President in writing the letter in which he exonerated Secretary Ballinger and removed Glavis. The committee did not support Mr. Brandeis in a demand for information on this point. Therefore Representative Harrison, of New York, introduced in the House a resolution calling upon the Attorney-General for the facts. Chairman Parker, of the Judiciary Committee, wrote to Mr. Wickersham, inquiring as to the propriety of this resolution. During the investigation, on the 12th, Secretary Ballinger read a letter in which, addressing Chairman Parker, the Attorney-General admitted that his summary of the evidence had been predated. He explained that it was dated back to conform with the date on which he had submitted an oral opinion to the President. The summary bears the date of September 11, and the date of the President's exoneration of Secretary Ballinger's was September 13. On the 14th inst. there was published a statement made by Frederick M. Kerby, one of Secretary Ballinger's stenographers, asserting that the President's letter of exoneration was in substance the same as a memorandum prepared in the Secretary's office and under the latter's supervision by Oscar Lawler, Assistant Attorney-General for the Interior Department. On the night of the 15th the President, in a letter addressed to Senator Nelson, chairman of the committee, assumed all responsibility for the Lawler memorandum and also for the predating of Mr. Wickersham's summary or opinion. He says that he himself reviewed the entire record, reached a decision, and then, having much other work to do, requested Mr. Lawler "to prepare the opinion as if he were President." But the opinion thus prepared was not just what he wanted, and he used only a few paragraphs from it. On September 11 and 12 he discussed the matter with the Attorney-General and completed his own written opinion. His conclusions, he says, were based upon his study of the record and were "fortified by the oral analysis of the evidence and the conclusions" which the Attorney-General gave him. As time did not permit him to embody and analyze in his opinion the Attorney-General's notes, he directed the latter to place them in a written statement, file it with the record, and date it prior to the date of his own opinion, so as to show that his decision had been fortified by the Attorney-General's summary of the evidence and also by the latter's conclusions.

Cuba and Porto Rico

The State Department at Washington has begun negotiations with the Cuban Government for permission to raise the wreck of the battleship "Maine." An appropriation of $100,000 for the work was made in a bill recently passed, which directs that the wreck shall be raised and removed by the engineers of the army, and that the remains of those who perished at the time of the explosion shall be interred in the National Cemetery at Arlington, where the mast of the battleship is to be erected. It is thought that the entire cost of the work will be $500,000.——Owing to severe criticism in the Cuban House of his administration while he was Secretary of State, Señor Velez, recently appointed Minister to Madrid, has resigned. It is said that the money appropriated for a year's work in the State Department was expended in six months. Señor Velez's course is also criticised by his successor, Señor Sanguily, and there will be an investigation. ——In the suit of our Government against Charles F. Neely, head of the Financial Bureau of the Department of Posts in Havana while the island was governed by the United States, a jury in New York last week returned a verdict that he must pay $112,901. He was ar-

rested for embezzlement, but prosecution was dropped under the general amnesty agreement when Palma became President. Our Government, however, sued to recover the money. This was the second trial. At the first one the jury disagreed.——The municipal elections in Cuba have been postponed from July to December, probably because of recent political disturbances. Congress has passed a bill (which many believe to be unconstitutional) denying official recognition to any political party based upon racial lines. It is aimed at the proposed negro party. A majority of the negroes recently arrested for conspiracy to incite rebellion have been released, but they are required to report to the court every Monday.——Governor Colton, of Porto Rico, says the island should be a very attractive winter resort, having fine scenery and 1,200 miles of good automobile roads. But hotels are lacking. Arrangements have been made for the erection of one in San Juan, at a cost of $500,000, upon a site now owned by the Federal Government. A bill pending at Washington provides for a transfer of the land to the insular Government, in order that it may be available. Porto Rico, the Governor says, is well qualified to compete with Cuba, Jamaica and Florida for the patronage of winter tourists.

Countries South of Us

There were additional earthquake shocks in Costa Rica on the 13th. Several buildings in San José were wrecked, newly made graves at Cartago were opened, and the village of Santiago was destroyed. From San José thousands fled in terror. At Cartago more than 1,000 bodies have been taken from the ruins. It is estimated that from 800 to 1,000 persons were killed on the 4th at Paraiso, Orisi and Pocaca. Pestilence has broken out in the camps of refugees near Cartago, and many have died there. The volcanoes of Irazu and Poas, silent on the 4th, were in eruption at the time of last week's shocks. It is now reported that Dr. Bucanegra, Guatemala's representative in the Central American Court of Justice, lost not only his wife and one child, but also all of his other children. He became insane and died in the hospital at San José. For the relief of the destitute Guatemala has contributed $10,000, and Panama an equal sum. Committees in Central America have raised about $250,000. President Taft, as president of the Red Cross, has published an appeal to our people, asking for contributions. Severe shocks were felt in Santo Domingo on the 11th, but no loss of life there has been reported. ——In Nicaragua, the Madriz forces are within nine miles of Bluefields, but an attack has been delayed. Estrada seeks to attract volunteers by promising to give each one 125 acres of land.——There has been active preparation for war both in Peru and in Ecuador. Troops have been moved to the frontier, and Ecuador's President left his capital last week to review his forces there. A Lima paper says Peru's only hope of peace is in the efforts of the United States to prevent the war. Neither country is financially prepared for such a contest. Peru recently borrowed $1,700,000 in France at high rates. Chili has ordered a dozen batteries of Krupp guns and invited bids for two destroyers.

Roosevelt's Berlin Address

In spite of the fact that the death of King Edward robbed the reception of Mr. Roosevelt at the German capital of the official and spectacular functions, he was received with every possible honor. A sham battle was given at Döberitz, midway between Berlin and Potsdam, in which 12,000 troops took part under the observation and criticism of the German Emperor and Mr. Roosevelt. The Emperor and Empress also attended the address delivered by Mr. Roosevelt at the University of Berlin, on the occasion of his receiving the honorary degree of Ph. D. He began by referring to the military display in the following words:

"Yesterday I attended a session of a great open-air university, and sat at the feet of its most eminent professor. I saw many troops, and I failed to see how any man could watch those soldiers file by and not feel a certain swelling of the heart as he realized that these men from the workshop and plow were physically, morally, and intellectually fit to meet any demand made upon them. I am not in the least afraid of decadence in Germany as long as you breed such men as I saw in the field yesterday."

The subject of his address was "The World Movement," and it was largely devoted to a cursory survey of the development of civilization and racial migrations and conquests from prehistoric times to the present. He showed how modern science had completely changed the conditions of life, particularly in making all parts of the world accessible and practically breaking down the barriers of race and religion.

"When in America we study labor problems and attempt to deal with subjects such as life insurance for wage-workers, we turn to see what you do here in Germany, and we also turn to see what the far-off commonwealth of New Zealand is doing. When a great German scientist is warring against the most dreaded enemies of mankind, creatures of infinitesimal size which the microscope reveals in his blood, he may spend his holidays of study in Central Africa or in Eastern Asia; and he must know what is accomplished in the laboratories of Tokio, just as he must know the details of that practical application of science which has changed the Isthmus of Panama from a death-trap into what is almost a health resort. Every progressive in China is striving to introduce Western methods of education and administration, and hundreds of European and American books are now translated into Chinese."

In comparing ancient civilizations with our own, Mr. Roosevelt showed that their decline was largely due to the growth of love of ease and luxury, thus making necessary the employment of mercenary troops for defense. The exact reverse is the case in modern times. A few centuries ago alien and mercenary soldiers were largely employed in European wars, while at the present time practically every army is a citizen army, and the mercenary has almost disappeared, while the army exists on a vaster scale than ever before in history. This is true not only of the military monarchies of Europe, but of the Civil War in America. The armies of Grant and Lee were as emphatically citizen armies as those of Greece and Rome in their best days. Another important change is the divorce of wealth and politics, which Mr. Roosevelt explained as follows:

"There were a few exceptions in ancient days, but the immense majority of the Greeks and the Romans, as their civilizations culminated, accepted money-making on a large scale as one of the incidents of a successful public career. Now all of this is in sharp contrast to what has happened within the last two or three centuries. During this time there has been a steady growth away from the theory that money-making is permissible in an honorable public career.

"In this respect the standard has been constantly elevated, and things which statesmen had no hesitation in doing three centuries or two centuries ago, and which did not seriously hurt a public career even a century ago, are now utterly impossible. Wealthy men still exercise a large, and sometimes an improper, influence in politics, but it is apt to be an indirect influence; and in the advanced states the mere suspicion that the wealth of public men is obtained or added to as an incident of their public careers will bar them from public life.

"Speaking generally, wealth may very greatly influence modern political life, but it is not acquired in political life. The colonial administrators, German or American, French or English, of this generation lead careers which, as compared with the careers of other men of like ability, show too little rather than too much regard for money making, and literally a world scandal would be caused by conduct which a Roman Pro-Consul would have regarded as moderate, and which would not have been especially uncommon even in the administration of England a century and a half ago. On the whole the great statesmen of the last few generations have been either men of moderate means, or, if men of wealth, men whose wealth was diminished rather than increased by their public services."

He concluded with an exhortation not to neglect any of the virtues which had made great the nations of the past if we would preserve our own civilization from decadence.

"We need first of all and most important of all the qualities which stand at the base of individual, of family life, the fundamental and essential qualities—the homely, everyday, all-important virtues. If the average man will not work, if he has not in him the will and the power to be a good husband and father; if the average woman is not a good housewife, a good mother of many healthy children, then the State will topple, will go down, no matter what may be its brilliance of artistic development or material achievement.

But these homely qualities are not enough. There must in addition be that power of organization, that power of working in common for a common end, which the German people have shown in such signal fashion during the last half-century.

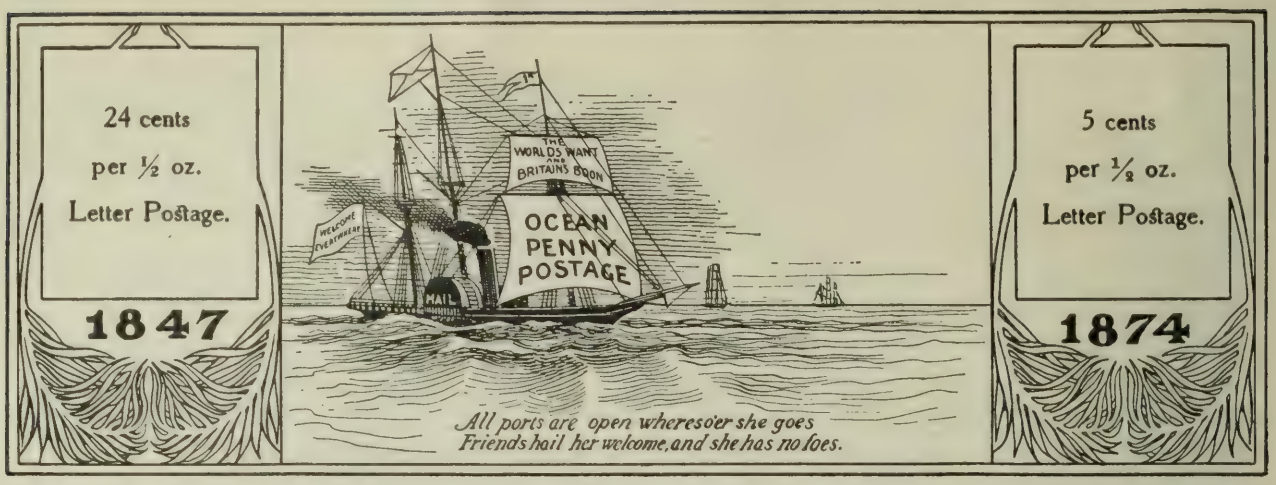
Moreover, the things of the spirit are even more important than the things of the body. We can well do without the hard intolerance and arid intellectual barrenness of what was worst in the theological systems of the past, but there has never been greater need of a high and fine religious spirit than at the present time. So, while we can laugh good-humoredly at some of the pretensions of modern philosophy in its various branches, it would be worse than folly on our part to ignore our need of intellectual leadership."

The Funeral of Edward VII

The body of the late King is lying in state in the throne room of Buckingham Palace. Four guards from the King's company of Grenadiers stand about the catafalque, absolutely motionless with their hands crossed on reversed rifles and heads bowed. They are changed every half hour as the post is a trying one. Religious services were held in the throne room on the night of the 15th at which the royal family attended. Much anxiety is felt lest the intense grief of the Queen Mother Alexandra should injure her health. On Tuesday, May 17, the coffin is to be conveyed to Westminster Hall where an opportunity will be given for all the people to pay their respects to the late King. When Gladstone's body lay upon the same spot it was visited by 300,000 persons, and it is expected that in this case over a million will pass thru Westminster Hall during the three days. The public will be marshalled in sets of four, passing on both sides the bier. On the 20th the final procession will pass from Westminster Hall to Paddington Station, the casket being placed upon a gun-carriage as in the funeral of Queen Victoria. Windows and roofs from which the line of march may be viewed command high prices, and when the police authorities had the route changed to avoid congestion of the crowds in Trafalgar Square there were vigorous protests made by those who had rented space on the streets to be omitted. For standing room in good positions $15 is charged, and a small window in Piccadilly has been rented for $1,000. The pageant will be a remarkable one for eight kings will follow the coffin of King Edward. King George will ride first and followed in this order by the Duke of Connaught, the German Emperor, Prince Arthur of Connaught, the King of Greece, the King of Denmark, the King of Spain, the King of Norway, the King of Portugal, the King of the Belgians, Prince Henry of Prussia, Archduke Ferdinand, representing the Emperor of Austria; M. Pinchon, the French Minister of Foreign Affairs; General Dalstein, Admiral Marquis, and M. Mollard, representatives of France; the Grand Duke Michael, representing the Czar; Theodore Roosevelt, representing the United States; the Duke of Aosta, representing Italy; Prince Henry of the Netherlands, representing Holland; Prince Fushimi, representing Japan; Youssouf Izedir Effendi, representing Turkey; Prince Mohamed Ali, a brother of the Khedive of Egypt, representing Egypt; Crown Prince Ferdinand of Rumania, the Crown Prince of Montenegro, the Crown Prince of Servia, Prince Charles of Sweden, and the Sultan of Zanzibar. President Taft's appointment of Mr. Roosevelt as special envoy to represent the United States at the obsequies of Edward VII has given great satisfaction because it affords the English people an opportunity to do honor to the ex-President in spite of the upsetting of their plans for his reception on account of the suspension of all official social functions.

King George

The proclamation of George V as "King of the United Kingdom of Great Britain and Ireland, and of the British Domains beyond the Seas, Founder of the Faith, Emperor of India," was made on the morning of May 9 according to the ancient usage. At nine o'clock four herald-trumpeters appeared on the balcony of the Friary Court at St. James Palace and blew their long silver trumpets, then Sir Alfred Scott Scott-Gatty, Garter Principal King of Arms, read the proclamation and called for three cheers for the new King. The ceremony was watched from the windows of the Marlborough House opposite by the heir apparent and other children of the King. At Temple Bar the royal herald was stopped by a red silken robe stretched across the street in accordance with the ancient privilege of the city of London. The Lord Mayor, Sheriff, Alderman and officers of the city, in their official robes, stood behind the bar and, as the proclamation was handed to him, the Lord Mayor descended from his carriage and read it to the people declaring that "our high and mighty Prince George has now become our only lawful and righteous Liege Lord, George V. God save the King." The only disturbance of the political "Truce of God" is the controversy over the coronation oath, which is offen-



sive to the Roman Catholics. The objectionable clause is quoted and discussed in our editorial department this week. At the time of the accession of King Edward the matter was agitated and it was well known that the King objected to the form of the anti-Catholic clause. A Parliamentary Committee was appointed to consider the question and in accordance with its recommendation a new form of declaration was proposed by the Government but not passed. And a motion made by Earl Grey in the House of Lords to abolish the declaration was defeated by a vote of 109 to 62. The movement to change the declaration meets with heated opposition from the extreme Protestants and it will be somewhat difficult for the Government to take such action because it is already accused by its enemies of undue subserviency to Mr. Redmond in making concessions to the Irish party to secure the passage of the budget. A letter issued by the chairman of the Church Association representing the Evangelical Branch of the Established Church denounces the proposed changes in the following language:

"Mr. Redmond carries his dictatorship beyond the bounds of decency. Before the remains of our late beloved King could be laid in their coffin he has the audacity to announce that his claim on Mr. Asquith is nothing less than that the Bill of Rights and the Act of Settlement, the twin foundation of the British throne, shall be treated as so much waste paper and be deliberately disobeyed on the advice of the Prime Minister.

"This is but a sample of the contempt for the Constitution and of the hatred of the free institutions of this country which are manifested by the paid agents of the priest party, whose war chest is replenished by Irish-American sympathizers. A lawyer of Mr. Asquith's eminence, however much he might wish a change made in the law, would necessarily recoil at the suggestion of such a flagrant act of treacherous disloyalty as Mr. Redmond dares to suggest."

Foreign Notes

Women have gained universal municipal suffrage in Norway. The Obelsting, that branch of the legislative body of Norway which has exclusive control of changes in the government, has voted by a large majority to give to women over twenty-five years the suffrage in municipal affairs. Since 1907 the women of Norway have been allowed to vote under the same conditions as the men only when they pay income tax on an annual income of $100 in the towns or $75 in the country districts. The present action places both sexes on an equality in all respects in regard to the national and municipal franchise.——It is an unfortunate thing for the English Liberals that two of their members should have been unseated by the Special Elections Court for improper use of money in the recent election; Sir Christopher Furness last week and Capt. Frederic Guest this week. The charges brought against Captain Guest by his opponents were that his expenses had amounted to at least $22,000, while he had declared that they amounted to only $8,715. Justice Lawrence based his adverse decision upon the failure to comply with the law in making a complete return of all election expenses, but he did not regard the charges of undue influence and bribery of voters as having been proved, and he exonerated Captain Guest from the responsibility of hiring automobiles for the conveyance of voters to the polls. Mr. Henry Phipps, steel manufacturer, of Pittsburg, and father-in-law of Captin Guest, had provided eight automobiles for this purpose on his own responsibility. Captain Guest is a cousin of Home Secretary Churchill, whom he has served as Parliamentary private secretary.——The assassin of Boutros Pasha, the Egyptian Premier, was found guilty and condemned to death in Cairo on May 13. It will be remembered that Mr. Roosevelt, in his address before the students of the University of Cairo, exprest his abhorrence of such political crimes and of the political agitation which led to it.——The court of appeals at Paris has confirmed the decision of the assize court which condemned Hervé, the anti-militarist leader, to four years' imprisonment because of his article expressing sympathy with the apaches who have murdered policemen.——The Cretan Assembly has again announced its desire for annexation to Greece, and the deputies took an oath of allegiance to the King of Greece by acclamation. The Mohammedan deputies protested, but the protest was not received. One of the Christian deputies struck Neim Bey, who presented the protest, and another tore the document in pieces.

REPRODUCTION OF LETTER HEAD USED DURING MR. BURRITT'S CAMPAIGN FOR OCEAN PENNY POSTAGE.

A Pageant of Brotherhood

BY REV. HERBERT A. JUMP

[Last week occurred at Hartford, Conn., the First New England Arbitration and Peace Congress. The thriving city of New Britain, ten miles away, also participated in the congress, for at New Britain just one hundred years ago was born Elihu Burritt, the greatest peace advocate of the United States during his lifetime. The following article by the chairman of the Executive Committee of the Burritt Centennial Celebration is an account of the one unique feature of the New England Arbitration and Peace Congress. It is interesting to note that Mr. Burritt was a frequent contributor to THE INDEPENDENT in the sixties and seventies and his autographic picture, which we herewith reproduce, was sent us by him years ago and has ever since reposed in our old-fashioned office album.—EDITOR.]

On the main street of the manufacturing city of New Britain, Conn., there has been hanging for the last week a huge banner, as large as two barn doors, half olive green and half white, bearing this motto, "Above All Nations Is Humanity." That banner symbolizes an ideal which at least one modern American municipality is striving to work out into reality.

Opposite that legend as it swings in the wind is a great schoolhouse, where every night of the winter strange and often uncouth specimens of humanity from all parts of Europe come to be taught the English tongue. Fronting that same legend is a church whose minister, born of simonpure American stock, preaches each Sunday to Americans, many of them no less patriotic than he, but whose political ancestry flows from a dozen racial sources. Beneath that motto of brotherhood thousands of men and women have walked each day to and from work, and because they understood not the language of their employers, but only Syriac or Italian or Swedish or Polish or Russian, they have asked of some fellow-countryman what the banner and its motto meant, and perhaps they have learned, but more probably not.

Elihu Burritt.

From an old photograph long in the possession of THE INDEPENDENT.

The reason for the banner and its legend

is found in the centennial of Elihu Burritt, who was born and who died in New Britain and whose memory lingers over the city like the soft afterglow of a summer sunset. Mr. Burritt is not remembered very much today. A few have heard his title, "The Learned Blacksmith," and have marveled at the genius that could spend so much time in the smoke of a smithy forge and yet acquire before he was thirty years of age a reading knowledge of fifty languages. A smaller number know that Mr. Burritt was one of the foremost world apostles of international peace a half century ago, and that he organized the first International Peace Congress in Brussels in 1848, not far from the battlefield of Waterloo, and had the impertinence to plan a series of peace pamphlets that should bear the name of that bloody field. A still smaller number of persons have heard that Elihu Burritt became in a dozen ways for the town where he lived an incarnation of Christian brotherhood, erecting missions for the common people out of his humble means, organizing "Penny Readings" for those who could not achieve the joys of culture in more expensive ways, conducting Sunday schools in his own barn and in the schoolhouses of the country-side, and ever proclaiming by precept and example that "a man's a man for a' that," and finally "the world o'er shall brothers be." The impression he made universally upon his townsmen may be inferred from the testimony borne the other day by one of his co-workers, "Elihu Burritt's face had the gleam in it. To have known him was to have known Jesus Christ."

Now, because Mr. Burritt was so uniquely an embodiment of the brotherly spirit, his memory was used last week to promote a meeting of the score of races brought together by the huge hardware and other factories of New Britain. Under the guise of celebrating the centennial of his birth, the peoples of this throbbing cosmopolitan city of 50,000 souls, Parthians and Medes and Elamites, dwellers in Mesopotamia and Judea

THE PARADE OF SCHOOL CHILDREN.

Over 7,000 school children and representatives of the races marched in line. The picture shows the children of the Polish Parochial School escorting their motto, "Peace, Good Citizenship and the American Spirit."

AT THE GRAVE OF ELIHU BURRITT.
This picture shows the national flags and memorial wreaths presented in the International Tribute, when seventeen races in the population of the city paid respect to the Prophet of Brotherhood.

and Cappadocia, were assembled in one of the most remarkable pageants of brotherhood ever wrought out in this "melting-pot" of America. On the general committee were represented fourteen nationalities.

In the parade of more than 7,000 peace-soldiers there were more than a score of racial stocks. A Burritt Peace Army of 3,000 school children, all of them wearing badges representing a wreath of olive-leaves, and having been taught the meaning of the life of the "Apostle of Brotherhood," divided into more than a hundred companies, each with its distinctive color-scheme in flags and sashes carried by the children, with the result that the total Burritt Peace Army glowed like a colossal marching rainbow—an international and float division in which, with the aid of a dozen bands paid for by as many races, companies from fifteen different nationalities stepped time to melodies gleaned from the music of the world—an enthusiastic army of more than 4,000 men escorting symbolic floats, showing such subjects as King Cashmier of Poland, a famous peace monarch; the Nobel Peace Prize; Liberty Enlightening the World; Washington First in Peace; Peace on Her Throne; the Grand Duke of Lithuania, a Servant of Peace, and thus thru a score of subjects—the streets of the city ablaze with bunting and flags of all nations and the green-and-white Burritt Peace Flag adopted by the Centennial Committee—band concerts in all the city parks—great mass meetings with famous speakers—a jubilee chorus of a hundred, rendering Gounod's "Gallia"—a children's peace choir of 250 voices—a half holiday in all the schools, factories and stores of the city—surely no prophet of peace ever had quite this amount of international enthusiasm felt in his work. There were Burritt post cards, Burritt stick pins, Burritt belt buckles, and even a Burritt ice cream!

The most dramatic spectacle in this

pageant of patriotic education remains yet to be described. The route of march was planned so as to bring the entire parade past the grave of Elihu Burritt in Fairview Cemetery. And to decorate the place appropriately an international tribute was devised. In this ceremony seventeen women, resplendent in native costume, representing the countries contributing to New Britain's population—England, Germany, France, Poland, Ireland, Italy, Palestine, Denmark, Russia, China, Persia, Greece, Lithuania, Armenia, Sweden, Scotland and the United States—marched before the speaker's platform, each escorted by a man of the same race carrying his nation's flag, and, after giving their salutations to the chairman, the two representatives moved to Mr. Burritt's grave, where the woman offered a laurel wreath to the memory of the "Apostle of Brotherhood," while the man placed his flag in a socket prepared for it. As the thirty-four persons grouped themselves about the modest monument of Mr. Burritt, as the breeze played thru the many-colored flags, as the sun smiled down upon the picturesque Old-World costumes, the delegates of the New England Peace Congress, who had been brought from Hartford on a ten mile automobile pilgrimage to witness this ritual, prayed that this acted parable of brotherhood might have its counterpart in every one of our American cities, and that the spirit of fraternity thus symbolized might enter into and dominate our politics, our industry, our religion. And then the 3,000 school children and the 4,000 foreign-born and native-born American citizens marched past the tableau, and it is to be hoped caught its vast and divine meaning.

Now the Burritt Centennial at New Britain is over and $10,000 was spent in one half-day in declaring the faith that "Above all Nations is Humanity." But the effects of the fraternal festival are only just beginning. Already the Commonwealth Club, an organization of men and women interested in civic matters, has proposed the establishment of an International Council in which the several racial groups in our citizenship may come together for acquaintance and cooperation. It is queried also whether the city might not celebrate annually a "Burritt Day," and by means of a folk-dance festival and an international parade keep alive, for the inspiration of future years, the enthusiastic brotherliness now characterizing the city's life.

At least this may be said with surety, everyone wishes long life and happiness to the baby born into the home of the leader of the Persian colony last week, for the father in the high emotion excited by the occasion named his young hopeful "Burritt Baba."

New Britain, Conn.

Memorial Day

BY WILLIAM F. McCORMACK

Bring your wreaths and garlands fair,
Strew the roses 'round,
For a hero's sleeping there
Under every mound.
Leave the flag they held so dear
For their history,
Flowers for love—perhaps, a tear
For a memory.

Ah, their coats were bright and blue
In a gallant row,
And their hearts were light and true—
Fifty years ago;
And their shibboleth was Right
Their reliance Faith,
When the long line past from sight
Marching on to death.

Gettysburg and Malvern Hill,
Oh, the fights they made!
Wilderness and Chancellorsville,
Oh, the price they paid!
Oh, the lesson that they taught
And the strength they gave,
And the flaring fields they fought—
And the nameless grave.

Come away; they are not dead
Whose renown is fair—
See, a nation bows the head
In a hallowed prayer;
"God of Heroes, who didst fill
Them with purpose pure,
May their souls be with us still
May their strength endure!"

BUCKINGHAM PALACE.

The King of England

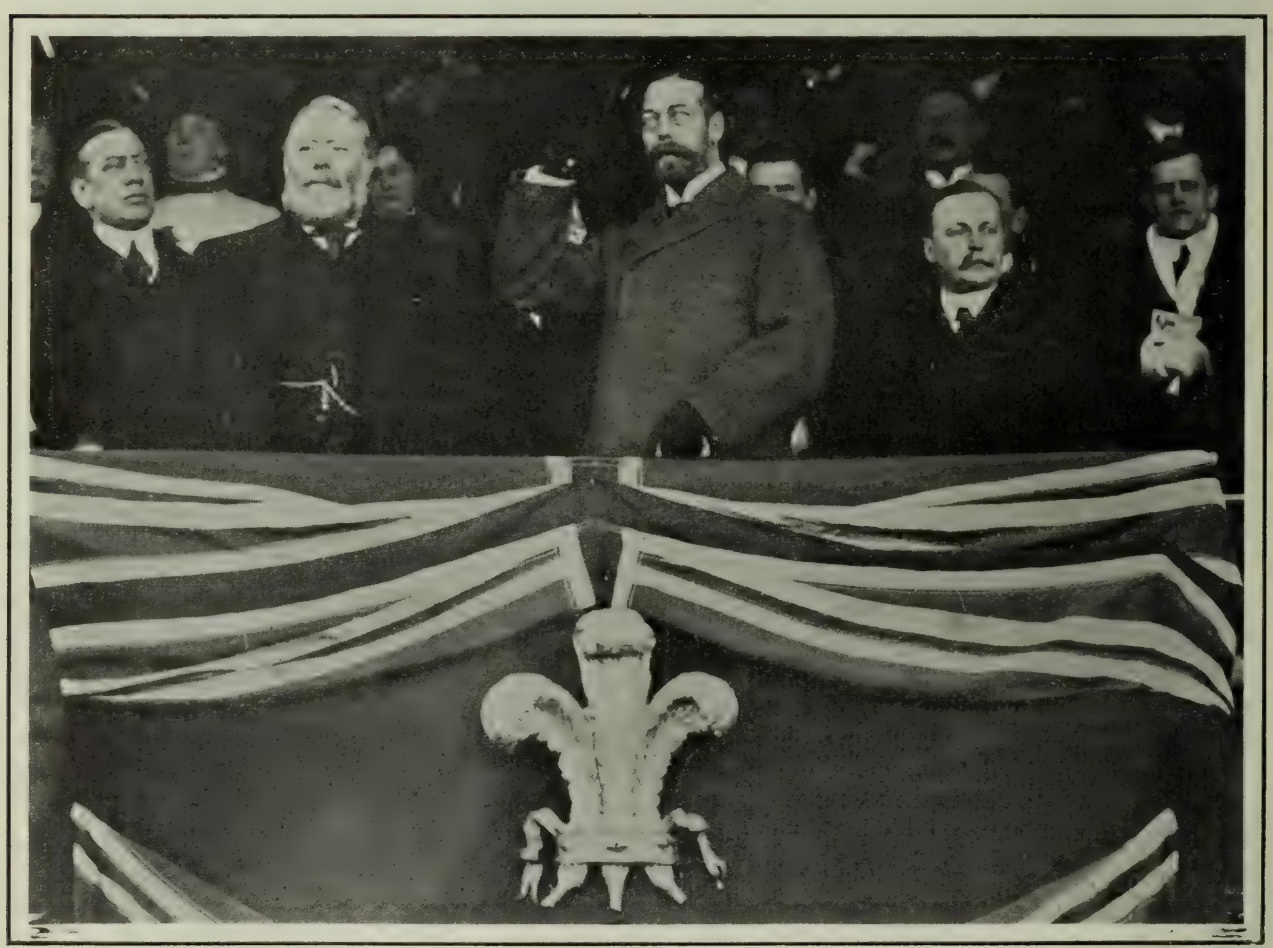
BY F. CUNLIFFE-OWEN

[The author of the following article is probably the best informed writer in this country on European royalty and aristocracy, and has written much about them from personal acquaintance.—EDITOR.]

NO prophecies are more fallacious than those which are made concerning a new reign. The old adage about the child being the father of the man does not apply to the anointed of the Lord. History has shown us time and again how impossible it is to derive from the life of a prince as heir apparent, any idea as to what his career is likely to be as sovereign. Shakespeare made this the theme of one of his finest dramas.

When the present Kaiser was called to the throne some two and twenty years ago, several of the greatest statesmen of Europe exprest the conviction that, eager for military laurels, he would speedily plunge his Empire into war, while his regard for Bismark, his reported aversion for the liberalism of his parents, and his intimacy with the Waldersees, the Stockers, etc., convinced his people that under his rule they would be subjected to a policy of reaction and intolerance. Yet never have the relations between the Court of Berlin and the Vatican been so close as during his reign. The Pope looks upon him as his best friend, owes, indeed, in a measure, his election to his diplomacy. A Roman Catholic for years held the office of Chancellor of the Empire, and the Catholic party in the Reichstag are the most important supporters of his policy. Instead of being reactionary, he is championing the cause of the trading and industrial classes: in one

word, of Liberalism against Toryism, represented by the ultra-conservative territorial aristocracy. Far from displaying any prejudice against the Jews, as had been predicted in consequence of his association with Stocker, no German sovereign has ever shown them a greater degree of favor, selecting not only his Ministers, but also his personal friends from among them, while the fact that Germany has not only refrained from drawing her sword since his accession to the Crown, but has also on several occasions intervened successfully in the interests of peace, has belied the fears of 1888, that he would prove a firebrand.



KING GEORGE AND QUEEN MARY.

When Edward VII came to the throne it was prophesied that he would continue to pursue as King the life of pleasure that he was believed to have led during his long career as heir apparent: that he would prove indifferent to his obligations and responsibilities: that politically he would be satisfied with a course of *laissez aller,* and that he would inaugurate an era of extravagance. Yet the close of his brief reign of less than ten years finds England with the authority of the throne greatly increased, with many important prerogatives of the Crown restored, with the power of the Empire and its prestige abroad augmented to an altogether extraordinary degree, with the popularity and influence of the monarch in his own dominions so enhanced that the people have been looking to him as alone qualified to settle the constitutional crisis which has arisen between the two Houses of Parliament at Westminster.

Far from rendering himself guilty of extravagance, Edward VII showed himself a wonderfully able man of business, reformed out of existence innumerable abuses, reorganized his court in such a clever manner as to obtain the maximum of brilliancy with the minimum of expense, and refusing all offers of assistance by Parliament to settle the financial obligations in which he had become unavoidably involved while Prince of Wales, and declining proposals to increase the civil list beyond that enjoyed by Queen Victoria, he has died entirely free from debt. He is mourned not only by his countrymen as the most popular sovereign who has ever held sway over the British Empire, but also by foreign nations, as an important and useful factor in averting that most terrible of scourges of modern civilization, namely, a war of the Great Powers; a scourge to guard against which big nations are compelled to make cruel and crushing sacrifices of their meed of prosperity.

As it was with Edward VII, so it will be with George V. It is even more difficult to form any reliable estimate as to what sort of a King he is likely to prove than it was in the case of his father. The latter, when he succeeded to the Crown,

KING GEORGE AS THE PRINCE OF WALES AT THE ENGLAND AND SCOTLAND FOOTBALL MATCH AT THE CRYSTAL PALACE.

had been for close upon forty years the most conspicuous and familiar figure in English society. Genial, tactful, full of bonhomie, displaying the keenest interest in almost every phase of English

KING GEORGE'S CHILDREN.

life, almost everybody knew him—or thought that they knew him—which is not quite the same thing. But King George's career as heir apparent has been as brief as his father's reign, and his visits to the colonies and to India, while they have put him in personal touch with his lieges beyond the sea, still further diminished the opportunities of the people at home of becoming acquainted with his character.

Certain popular conceptions have been formed concerning him, and concerning the new Queen. But they are based on ignorance. Thus, an impression had got abroad that both George and his consort were extremely Low Church, as compared with the somewhat High Church leanings of Edward VII, and in particular of Queen Alexandra. In fact, when the new sovereigns drove out for the first time together from Marlborough House on the day following their accession, they were hailed with shouts of "Long live our Protestant King!" and "Long life to our Protestant Queen Mary!" these cries implying that their majesties would prove more evangelical and more disposed in favor of what is

known as the Anti-Popery movement than the late monarch and his widow. How little justified were these presumptions was shown when a few days afterward George V, with a degree of determination which his father had not ventured to display on an analogous occasion, notified his Ministers that he entertained insuperable objections to the phraseology of the so-called Act of Declaration, especially those portions thereof wherein the Roman Catholic faith is denounced as "superstitious and idolatrous," and in which most offensive references are made to its ceremonies and to the Pope.

Edward VII protested in vain against the use of these words in the pledge that every British monarch for 200 years or more has been compelled to give to Parliament on his accession, that he would adhere to the Established Church of England. George has gone a step farther, has pronounced the form of the promise as derogatory to himself and to his millions of Roman Catholic subjects, and has, it is said, directed the Premier to take immediate steps to amend the terms of the oath in such a way as to omit all insulting expressions with regard to the Pope and to the Church of which he is the supreme pontiff.

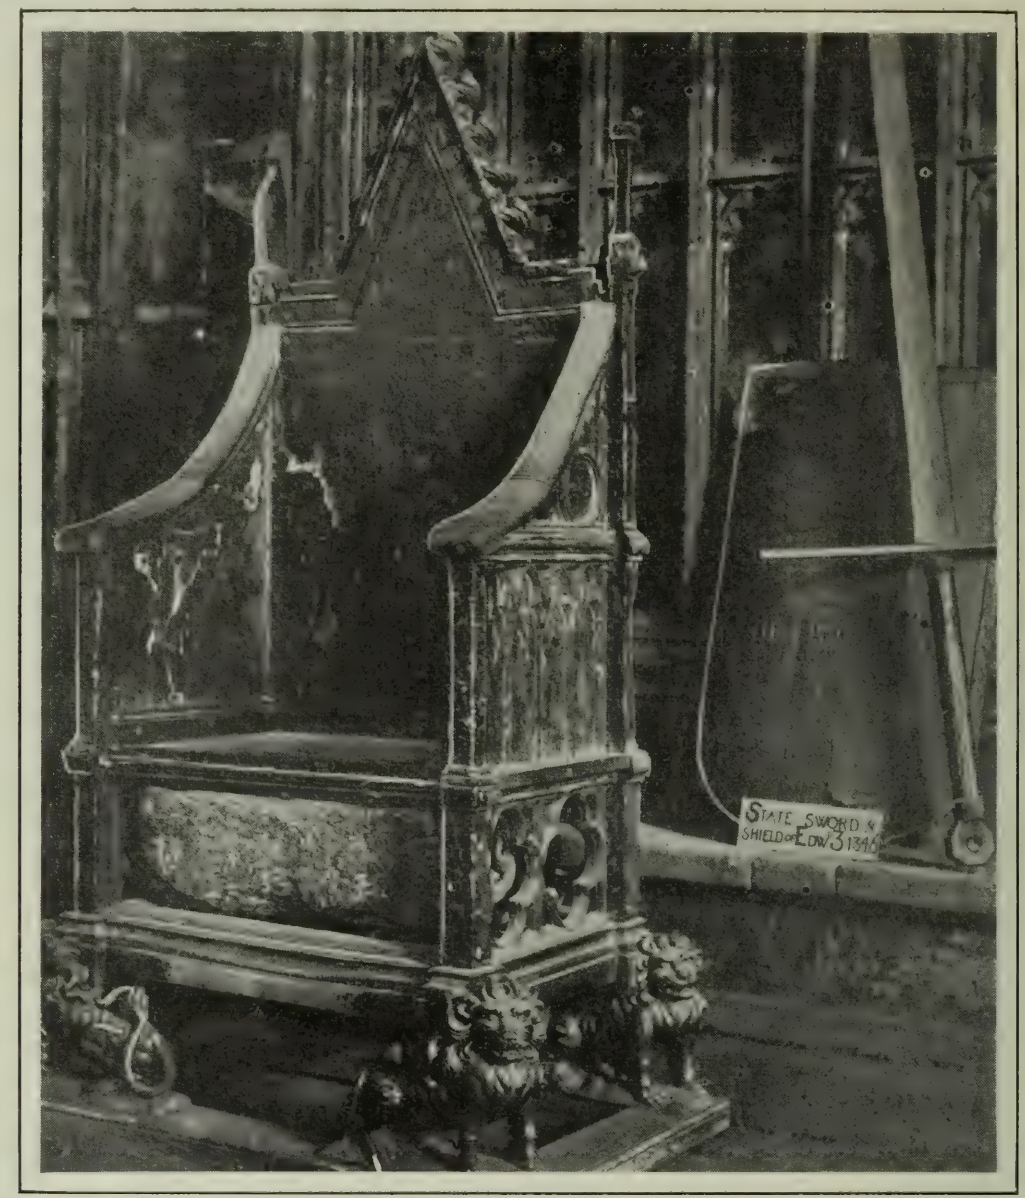
The Cabinet, in view of the firm attitude of the new King about the matter, has decided to comply with his demands, and altho some of the Unionists may be tempted to oppose any change, on the ground that it would constitute a concession to the views of the Irish Nationalists, yet there is no doubt but that ex-Premier Balfour and the other leaders of the Opposition, as well as the bulk of their party, will agree to the elimination of those words in the Act of Declaration and in the Bill of Rights which the late Lord Salisbury publicly described, on a memorable occasion when Prime Minister, as "a stain on the Statute Book of England."

ROYAL GROUP TAKEN DURING THE VISIT OF THE TSAR.

Queen Alexandra, Princess Mary, Princess Victoria, The Grand Duchess Olga, The Grand Duchess Tatiana, Prince Edward, The Princess of Wales, The Tsar, The Tsarevitch, King Edward, The Grand Duchess Anastasia, The Tsaritsa, Prince George, The Grand Duchess Marie.

The consensus of opinion concerning George V, both at home and abroad, as shown in the columns upon columns that

have been printed concerning him during the last eight or ten days, in the press, is to the effect that he is a Tory, rather than a Liberal, and that in matters of domestic policy his leanings will be toward the Unionists. There is nothing save mere gossip on which to base this assumption. George has been quite as discreet as was his father when heir apparent, in concealing his preferences for any of the parties of Parliament. Parnell was wont to assert that King Edward favored home rule, and this claim was in a measure confirmed many years later by Lord Macdonnell, who, when Under Secretary for Ireland, was understood to have the King's personal sympathy and moral support in all that he endeavored to accomplish toward the friendly settlement of the Nationalist problem. But the public are entirely in the dark as to the views of King George about these matters, and all that can be said by way of indication is that while intimate friends and associates of the new monarch, and of his consort, are far more restricted in number than those of Edward VII, form indeed a very small circle, they for the most part belong to the Liberal party, conspicuous among them being Lord and Lady Beauchamp.



George V has been more of a student than was his father prior to his accession to the throne, and since the death of his elder brother, the Duke of Clarence, and his marriage, has been conscientiously endeavoring to prepare himself in every way for the responsibilities of sovereignty. Edward VII was content, until he became King, to derive his knowledge of things from personal conversation with men of every class in life, who naturally endeavored in their talk to show themselves at their very best, with the object of creating a good and lasting impression upon the future monarch of the British Empire. Indeed, he did but little reading save *Romans-à-clef* (key novels), such as Alphonse Daudet's "Nabab," and memoirs. In the latter connection I can recall how astonished Edward, then Prince of Wales, and Leon Gambetta were, when they met for the first time at *dejeuner*, at the Hotel Bristol, in 1878, to each find that the other had just finished reading the "Reminiscences of Nassau Senior," which had appeared in the previous week, and furnished the theme of the conversation thruout the luncheon. Altho we were a party of about a dozen or more, yet the Prince and Gambetta were the only two present who had mastered the contents of the book.

THE QUEEN MOTHER.

George V is of a much more studious character, or rather has become so since his marriage, and he comes to the throne with a far more extensive knowledge of constitutional law and of kindred matters than did his father. It may be doubted whether the latter ever realized, until he became King, what were the prerogatives and limitations of the British monarchy. Of this I can furnish a strange and yet illustrative instance, which has never yet appeared in print. It may be recalled that at one moment the late Duke of Clarence was completely infatuated with Princess Helene of Orleans, who returned his affection, and was deeply in love with him. They became privately engaged; that is to say, with the knowledge of their respective parents, who strongly favored the match.

No one was more enthusiastic about it than King Edward, who could not conceive that the question of religion could enabling his eldest son to marry a Roman Catholic princess. He seemed to imagine that there would be no difficulty

THE CORONATION CHAIR.
The chair in which all the Sovereigns of England have been crowned; contains the ancient coronation stone.

prove any stumbling block. Recalling that the Comte de Paris's mother, the late Duchess of Orleans, had lived and died as a Lutheran, he expected that the Princess would readily consent to become a convert from Roman Catholicism to the Church of England. He found, however, that the Princess would not hear of any such thing, and that her stand in the matter was approved by her father. In nowise discouraged, he thereupon turned to the ministers of the day and to the great law officers of the Crown, asking them to arrange for the immediate enactment of a measure whatsoever about the affair, and was amazed to find that both the ministers and the law officers declared the passage of any such bill to be quite impracticable, in view of the provisions of the Act of Settlement, by the terms of which the present dynasty holds the English throne and that the Duke of Clarence could not contract any such matrimonial alliance without forfeiting his rights of succession to the throne. It was then that Princess Helene broke off her engagement to the Duke of Clarence, to the profound sorrow of his parents, and when she went to Rome, immediately after-

ward, attended by old General Baron de Charrette and his American wife, and was accorded several long private audiences by Leo XIII, it was not, as alleged at the time in court circles, to secure his consent to her conversion to Protestantism, but to seek spiritual consolation and the approval of the Pontiff, for having made a particularly cruel sacrifice of her heart to her conscience. If I mention this, it is because it shows how completely Edward VII, as Prince of Wales, failed to understand the insuperable obstacles to the marriage of Princess Helene to his eldest son, arising from the provisions of the Act of Settlement and from the National Constitution. George V would never, as heir apparent, have been under any such misapprehension.

This is not the only respect in which George comes to the throne more carefully equipped for his task of sovereignty than his father. Queen Victoria, while entrusting to her eldest son all the more ornamental duties of the Crown, had rigidly excluded him, until the very last, from any share or voice in the government. He was, in fact, a complete stranger to the routine of rulership of the vast British Empire, and during the first fortnight or three weeks after his accession was forced constantly to appeal for information and advice to his youngest sister, Princess Henry of Battenberg, who had been her mother's constant companion, and who knew much more about the duties of a monarch than he did. Nothing of the kind has happened in the case of George V. For his father, taught by his own experiences in 1901, has for the last three or four years associated his only son, who was also his most intimate friend, in most of his work. Every morning, when the then Prince of Wales was in town, he used to walk or drive over from Marlborough House to Buckingham Palace, immediately after breakfast, and remain there with the King until the luncheon hour, at two, occupying an adjoining room, with the doors open between them, taking part in his father's interviews with his ministers and other advisers and officials of one kind and another.

Relieving him of much labor, especially in the matters of detail, and becoming in this way so thoroly acquainted not only with all the questions of the hour, in domestic and foreign affairs, but also with the policy and views of the Crown, in respect thereto, he has been able to take up the scepter as soon as ever his father laid it down, and to continue the latter's task of governing the Empire without any interruption, without the slightest hitch, and without any of that confusion which, despite all reports to the contrary, attended the death of Queen Victoria and the accession of Edward VII.

One great asset which the late King had when he came to the throne was his personal popularity. This his successor does not possess to anything like the same degree, and in a measure he is likely to be handicapped by its comparative absence. Moreover, he has not his father's wonderful charm of manner, his bonhomie and his manifest desire to please, which won for him so many friends. George V. is more serious, less impulsive, and more deliberate, and may be relied upon never to take up any position without having previously made a careful study thereof. In fact, he has the best possible mental and moral equipment for the sovereign of an empire such as that of Great Britain. As time goes by, and his subjects learn to know him better, they will appreciate him more and more, and, provided that his life is spared long enough, he is likely to figure in English history as one of the most sagacious of its rulers. Certain it is, that a man who has been so singularly happy in his domestic relations, who is so deeply attached to his clever wife, and to his children, and who, above all, has been so good and devoted a son to his father and to his now widowed mother, should command the good will and the good wishes of his own subjects, near 400,000,000 in number, and of the friends and kinsfolk of England abroad, for a long and prosperous reign.

New York City

The Ann Arbor School of Religion

BY R. M. WENLEY

[It has long been recognized as a defect of the State universities that they could not officially provide for their students training in religion, altho this is, to say the least, as important to the proper development of the individual as any other kind of training. Of the many voluntary efforts made to rectify this, the most progressive and promising is the recent combination of religious forces working among the students of the largest of the State universities. At the head of the School is Professor Wenley, of the Department of Philosophy, author of "Modern Thought and the Crisis in Belief," a book which has aroused a great deal of discussion on account of its frank recognition of the changed conditions due to biblical criticism and scientific discovery, and its suggestions for the reconstruction of theology. —EDITOR.]

TO the credit of the churches, no little thought and substance have been devoted to arrangements for the spiritual welfare of students at the State universities. Few would allege gravely that these efforts have suffered from serious misdirection. Nevertheless, the problem is more complex than outsiders realize, even with the best intentions. One must live with it, day-in, day-out, to understand it. For the sake of brevity, it may be put summarily in the form of two questions. Is it sufficient that the several churches deal with the student as if he were a regular member, and nothing more? Evidently, they think not. Then, if not, how is he to be handled—as a student primarily? Now, tendencies to confuse the two have manifested themselves, or, at least, the associations inseparable from the former have affected the methods employed to solve the latter. It is true that, on the whole, the plan has been to treat the student as a church member, *plus* something else. Yet, occasionally, this "something else" has been interpreted. in practice at all events, as if synonymous with a sabbath school pupil of larger growth. And, no matter how defensible this outlook may be, or how naturally it may follow in the circumstances, it falls short of efficiency. For it fails to grapple with the problem, which may be put thus. Here is a great educational institution: all the "ologies" and sciences, all the technical and professional pursuits are represented by men of reputation, often of distinction: the grand exception is, not formal theology (we do not discuss this), but religion—in its nature as an integral part of human experience, in the profound influence it has exerted and is exerting over the destiny of the race. And the question comes to be, "How can those of us who realize its immense importance arrange to bring this side of our common humanity before the student with comparable force, not to say attractiveness?" The Ann Arbor School of Religion was organized two years ago, in the hope that it might pave the way to a solution for the University of Michigan, where serious interest in religion prevails among the student body in marked degree. Apart altogether from other signs that could be mentioned, it is significant that more than thirty undergraduates have determined to devote themselves to the foreign mission field.

Plainly, several large considerations are involved here. I am able to indicate them in barest outline only, altho any one might well fill my entire space. Their existence is the reason for the existence of the school. 1. Education confronts a unique situation today. Even during the Renascence, there was not such a vast body of new material to be negotiated in higher education. Hence, timetables expand, and drafts upon student interest and energy multiply continually. We contend that, be our intellectual advance never so successful, this is not enough, if spiritual nurture lag. All can refer to Eucken for ample justification (cf. "The Life of the Human Spirit," pp. 565 f.). The very maze of information tends to individualism, our besetting sin. 2. Social problems crowd upon us; our mixt and migratory population loosens the institutionalism which, together with a due sense of obligation to others, is best calculated to control unrest. Religion has always been the taproot of these safeguards. And, as our generation must needs face a spiritual no less than an intellectual task, the rôle re-

served to religion remains. 3. Divergent opinions are abroad about the relations between spiritual and intellectual offices. Some hold them inseparable. Some adopt the "secularist" position. Some insist on their partial disjunction, claiming that intellect is capable of spiritualization apart from the sanction of religion. While they make every allowance for denominational convictions, I think that the leaders in the school stand for the first view. In other words, we would urge that spiritual nurture requires a discipline of its own to chasten intellectual acqusitiveness, and that this cannot be obtained from the natural ebullitions of the student community, known as "college spirit," "freedom of self-governing initiative," and the like. Direction of the kind offered by the university in intellectual matters is indispensable here too. 4. In the amorphous body of a large university necessity exists for more definite pressure of institutionalism, with a resultant "atmosphere." The fact that, fundamentally, spiritual decision and applied religion are identical implies no less. 5. The school is therefore strongly favorable to the preservation, in all their freshness, persuasion and sanctity, of home ties, and of the church connection which students bring with them. These furnish a solid basis for its work. The university must accentuate, because it cannot replace the home and the church. Accordingly, we seek, and possess, the support of the local denominations which have developed means of carrying on special work among students. Apart from this, our effort would be nullified, possibly impracticable. The clergy and student pastors occupy a prominent place on our staff, while the several guildhouses, parlors and Christian association rooms are placed at our disposal generously. Nay, to a great extent our organization plans to intensify, link up and strengthen the facilities given by the churches.

What, then, of our aim? *First,* and in general, we wish to awaken the imagination of the student, so that he may appreciate the wealth and sense, the benignity of the spiritual life. We hold that it is by no means sufficient for the beneficiary of the State to become a "good citizen" simply—his zeal for the higher, holier things should be kindled. And this can be effected only if we accord him opportunity to realize the bearing of his own spiritual attitude upon the character of others; to learn the splendid services wrought by the servants of the heavenly vision in the past; to acquire concrete acquaintance with the ability of spiritual devotion to place personality upon an elevated plane. *Second,* and specially, to show that voluntary sacrifice for the spirit already attests the presence of a real fund of moralized energy, and that this is best elicited by association with the avowed aims of a religious body or society. *Third,* our means. We provide courses of instruction (as good as our resources can furnish) calculated to bring students into touch with the past and present influence of religion, and with the central forces that animate the religious consciousness. We believe that familiarity with recorded truth about these facts will, in the end, exert cumulative leverage, and persuade the youth that, whatever personal or denominational differences in opinion may be, there is a solid substratum of religious reality in human life, and that all must reckon with this if they are to enjoy, and to help society to enjoy, a sane, sweet, helpful humanity .

Finally, the work of the school is directed by a responsible council composed of representatives from each of the associated churches and societies, of three members of the staff at large, and of three members appointed annually from the faculties by the president of the university. The council elects an executive committee on which representatives of the churches serve. For example, the committee just elected to take charge next year has for president an Episcopalian; for secretary a Baptist, and the remanent members are a Presbyterian, a Congregationalist, and a Methodist respectively. Four are clergymen, one is a layman. The school has no official connection with the university, altho the presence of the university has called it into being. It is a supplementary organization, in all respects strictly voluntary. The attendance upon its courses since its inception has averaged eight hundred.

ANN ARBOR, MICH.

The Spotted Tail-Swimmer

BY THE REV. M. MACGILLIVRAY

THIS little animal of mysterious history is not uncommon in the rivers of the Middle States, and of Ontario as far north as the Ottawa. The name by which it is usually known is mud-puppy or Menobranchus, the one because it prefers a muddy bottom, the other because, tho to a slight extent a lung breather, it has permanent gills. Its present scientific name is Necturus maculosus, which, being interpreted, means spotted tail-swimmer.

Tho not at all rare, it is seldom seen, and hard to procure, being shy and nocturnal in its habits, and a dweller of deep water except in spawning time, April and May, when it approaches the shore.

Sometimes lake fishermen find an individual in their nets, but not knowing what it is, or what great scientific interest it has, they throw it away as a useless, ugly lizard. Nevertheless, it is not only one of the wonders of our American fresh waters, but of natural history. Now and then a specimen may be seen in a biological museum or aquarium. But the creature does not thrive in captivity, as for weeks and months at a time it may refuse food.

Two summers ago, I was lucky enough to secure a pair hiding in a pool among the keel blocks of an emptied dry-dock on Lake Ontario. They were about nine inches long, and three-fourths grown. Having placed them in a roomy tub, with some stones for shelter and hiding, and daily renewal of fresh water, I kept them for several weeks, and had some opportunity of observing the demure and shy but wise ways of mud-puppy life. The coloring, if quiet, is exceedingly rich, and very pleasing to the eye. The back and sides are an earthy brown, with a faint suggestion of yellow undertone, and irregularly spotted with black. The belly and inside of the legs are a light fawn. The three gill trunks on each side of the neck are brown, and the long, pendant gill-fringes a deep, most delicate ruby. The eyes are small, black and beady, without lids, and rather snaky looking. The snout is short and broad, with the small nostrils near the tip. The mouth is large and toothless, and the food is taken in by suction. The legs are slender, weak, four-toed, unable to give much support on land to the long, flexible body, but in the water sufficient for slow movement on the bottom. The skin is smooth, soft and oily.

The tail is muscular and strong, but in swimming the body undulates as well as the tail. In changing the water and refilling their tub I sometimes used the garden hose, which created a strong, rapid, circular current. As soon as they felt this they would promptly tuck their little legs into their sides, and head up stream, when their fine swimming powers and exceedingly graceful movement could be seen to utmost advantage. Then, to the uncritical eye, they might pass for any common fish resembling them in size and color, and reveal nothing of their reptilian and exceptional character. After a vigorous spurt against the rushing stream they would quickly tire, for they are not long-distance swimmers, and drop into the center of the eddy, where, unresistingly, and looped head and tail, they would float around in the swirling water. This, however, was a moment to see to best advantage the beautiful play of the ruby branchial fringes, as they were vigorously waved in the fresh, cool water, to get their breath, as it were. On things quieting down, they would shuffle away into such hiding as they could effect.

As to food, they are carnivorous, living on worms, minnows, small crustaceans and insects, but rather fastidious, disdaining to touch any dead thing, except possibly a bit of fresh liver now and then, under extreme hunger. My captives took an earthworm apiece the second day, but, for the rest of the two weeks I had them, they fasted, and refused to look at the liveliest, juciest wriggling morsel with which I could tempt their appetite. The authorities say that with only a frequent change of water they will live for months without

food. Out of the water, notwithstanding their lung-sacs, they die in less than six hours.

The science master of the Collegiate Institute borrowed one to show his senior class in biology, leaving the other alone for the night. The well-filled tub, placed in the back lawn, was covered with light pieces of board, except one small corner about an inch wide, and so the lone puppy was thought to be secure. But next morning my surprise may be imagined when I found it gone.

Searching for my missing amphibian, there it was in the grass about a dozen feet away, covered with dirt, inert, stiff, apparently dead. On returning it to the water, however, it very soon gave signs of life. The gill fringes lost their livid hue, and recovered their deep, ruby tint. And, as they resumed their function, a number of large air bubbles were expelled, showing conclusively enough that in its night excursion among the grass the animal was making use of its lungs. How long it was out of the water it is impossible to say, but the conditions of life were favorable, the night being cool, and the dew heavy.

During the day they would lie on the bottom, inactive, and hidden behind the rocks placed there for their comfort. A few times I observed them crawling out cautiously into view, and lifting themselves up on their forelegs, as if looking for some way of escape. As the sun went down, they came freely out of their hiding, and grew extremely restless, repeatedly giving a few strong swimming strokes, and trying to climb over the rim of the vessel. To prevent this, and bearing in mind the night escapade already mentioned, the tub, after sunset, was kept carefully covered and the water left about two inches below the edge. Necturus would seem to be a sort of night-hawk of the waters.

After a very superficial acquaintance with them for two weeks, from the outside of course, I returned them to their native waters, where they were quick to realize and appreciate their freedom, and seek cover under the friendly weeds. They are said to be excellent eating.

THE SPOTTED TAIL-SWIMMER.

And now what is there of popular or scientific interest in the life of this animal to warrant a sketch of its general appearance and ways of life? Many things and many mysteries.

Tho quite common in the lakes and larger rivers and streams of mid-America, it is but rarely seen, by reason of its nocturnal and hiding habits and bottom coloration. Popularly speaking, it is an amphibian, part fish, part frog, part lizard. It is lizard in shape, and for the supply of its blood with oxygen possesses both the lungs of the frog and the gills of a fish. Living exclusively in water, its lungs are mere air-sacs, and not sufficiently developed to sustain life for any length of time on land. And yet

the animal uses them to some extent, even in the water. My captives would repeatedly rise in their tub, thrust their noses out of the water, and swallow a mouthful of air, which, a few moments later, would bubble back to the surface.

The eggs of Necturus, about the size of peas, are laid in small clusters during the months of April and May, in shallow water, on the under surface of such objects, rocks or logs or boards, as they may find. The spawning grounds are visited at night, as the animals are never seen during the day, and the eggs may be found in a few feet of water by turning over the boards or other timber lying on the bottom. When boards or logs are not available, an old sunken shoe, or hat, or kettle has been made use of. Advantage is taken of this spawning habit by egg collectors, who, in the fall, sink boards in suitable localities to be ready for use by the animals in the spring. In this way eggs have been secured, and subsequently hatched out, giving considerable knowledge of the growth and habits of the baby Necturus.

Now, a word on the mystery which surrounds the history of this animal. Is it as we know it the perfect adult form, or an arrested development? Why has it lungs which have dry land and air in view? In this case, why have they not proceeded to full functional use, and why have not the gills been dropped? The gills suggest, of course, aquatic origin, but the presence of elementary lungs is prophetic of land existence later on, as comes to pass in the case of other lizards, and of the common frog. The tadpole is born from the egg with gills and tail, and lives for a season the life of a fish, but its changes continue until gills and tail are discarded, and lungs and legs are developed, when it comes out on the dry ground, a pretty perfect air-breathing animal, altho, as a frog, it never entirely loses its affection for the element of its first home, and the comforts of a frequent bath.

This is all orderly and regular, but Menobranchus seems to have stopped half way. Has it reached only the immature, larval stage, with just a hint of a more advanced estate, to which for some undiscovered reason it has not yet attained, but capable, nevertheless, in this condition, by some dark mystery of nature, of producing its kind? And is there any other animal known which might, with some show of probability, be regarded as the adult form of the larval Necturus or Menobranchus?

There are naturalists who believe there is, altho they are not agreed as to the species. Some point to one named Cryptobranchus (hidden gill) in support of their opinion. This animal occupies the same system of waters as Necturus, is without visible gills, a lung breather, somewhat larger, with much the same habits and coloring, and a history even more obscure. But this may be nothing more than an ill-founded guess, and Necturus itself, notwithstanding exceptional characteristics, may be the mature, adult form, for no one has ever witnessed the change from the one to the other. Yet, the strange fact that an animal should breed in what seems a larval state does not settle the question, for we know now of a related genus, the Axolotl of Mexico, which breeds in both the larval and adult states.

But, as Kipling would say, that is another story.

Kingston, Ont., Can.

A Visit to the Priest of Buddha

BY POULTNEY BIGELOW

AT sunrise, which is about six o'clock in the tropics, I was up and on my way to the holy man. The native who, the day before, had acted as messenger now smiled as I approached and nodded in the direction of the temple as tho to reassure me by the prospect of a cordial welcome—and so it was.

We talked first of matters political and he referred to America as a British colony. This impression I sought to correct and asked him for an atlas. He said he had one and the Burmese disciple brought me a tourist handbook advertisement in which was a map of the world, Mercator projection. I pointed out my country; but the frozen wastes of Canada showed up so magnificently over the well stretched longitudes and looked so warm and prosperous in their coat of red that he might be pardoned for regarding our "Great Republic" as a mere fringe on the grand robe of our northern sister.

By his manner he implied that if England did not own it, there could be nothing worth owning. He pointed to the Continent of South America as also a British colony and seemed puzzled at hearing there were a dozen independent states there not yet anglicised. Regarding Africa he seemed more at home, and asked me if I had been there. On my answering in the affirmative, he, with some warmth, asked me to point out the battlefields of the Boer war. As the whole of the Dark Continent occupied in his map less space than a cake of toilet soap and not even Pretoria was indicated, I could only put my finger vaguely over a few thousand square miles north of Cape Town—and he seemed easier in his mind.

Then he asked me if Holland was as strong as England. He seemed surprised when I told him that Holland was a geographical midget. After a little reflection, he said with conviction: "The Boers conquer England if Holland fight with Boers!"

Evidently the Boer prisoners, some of whom England kept in Ceylon, must have spread interesting rumors regarding the resources of their parent country—and I don't know how my correction affected him.

Then the chief priest informed me that Russia was bigger than the British Empire. To which I replied by pointing out that on the map much that passed for Russia was merely snow fields and waste. My Burmese Buddhist showed much sympathy for the Japanese in the late war and drew the conclusion that Japan, having conquered the biggest of the European powers, could now proceed to the demolition of an inferior empire—namely the British. Of course I told him that mere bigness of territory and multiplicity of big men did not make national strength. That England was the greatest of empires because her administration was honest and just. When I referred to equality before the law in British colonies Pandita protested that British law favored the Christian missionary and did not do so much for the Buddhist. When I asked him for his reasons he said that his monastery in Rangoon wished to make repairs, but the British authorities objected. I said I would go to Rangoon and inquire and write to him and this seemed to please him.

Then he served tea and I begged him to give me no more food, because my religion made me fast at this time. And indeed I still felt the effects of yesterday's orgy.

Then the chief priest reverted to religious precepts, in which field he showed to more advantage than in the sordid one of grasping politicians.

"The good Buddhist," said he, "must eat only in the forenoon.

"He must sleep on a hard bed.

"He must not dance or look on at dancing or singing.

"He must not smell scent or use flowers for decorating himself.

"He must worship on the Sabbath"—

and to my question the priest said that there were four Sabbaths in each month, tho not calendared in regular intervals, as with us.

When I inspected his bedroom I found his bed furnished with a mattress quite as soft as mine at home—altho his disciple slept on a piece of matting at the foot of the bed.

THE BUDDHIST PRIEST.

However, I did not call his attention to this divergence between precept and practice, for I had heard of Roman Catholic priests enjoying creature comforts and even a bishop of New York has slept with something softer than a piece of matting. As to meat eating my Buddhist said that while the good Buddhist must not kill, still he may eat if he happens to find it, provided he did not himself do the butchering or order it done. I pretended not to see any casuistry here. So I asked him what he did to those who broke the ten commandments.

He answered promptly that he did not punish them bodily in this world, but they suffered in the after life.

Later on he added another precept that the Buddhist priest not only may not touch money, but may not wear any jewelry or even touch or look at precious stones. And this rule seemed borne out in their practice, for my Buddhist had not a single ornament or article of wear save the single yellow piece of woven goods which he handled with singular grace—usually having one arm and shoulder bare, as in the days of Phidias. Indeed there was so much of magnificence to me in the perfect skin and general physical symmetry of these priests that any addition would seem like putting trousers on a thorobred greyhound.

The reverend Pandita not only had, with his assistants, apparently perfect physical condition—clear eyes—good teeth—graceful movement; but as he spoke I recalled some Buddhist monasteries or schools for priests in Pekin, Kioto and in Colombo also—and can recall no priest who was not also a well-built man.

Yet when I asked Pandita he insisted that the priesthood is open to all—rich and poor—plebeian or royal birth—athlete or cripple. However, he did add that there were 227 rules which priests must learn and practise and I infer from what he said that these practices, like those of a West Point cadet, virtually exclude all but the fairly competent men.

Pandita also admitted, in apparent

contradiction of a previous statement. that he ordered penances or punishment for transgression of rules—for instance said he, "I order him to sweep the paths about the temple or I make him draw the water."

This would correspond to what all novitiates submit to, particularly the West Point "plebe"—and would that it formed a feature of freshman life in our colleges. Pandita said that meditation or spiritual absorption formed an important part of his daily life—but at this point I had to resume my sandals and hurry home to breakfast with my Scotch friend at 9:30 a. m.

Thou blessed Buddhist—look at this bill of fare, concocted for Christians in the tropics—and can you wonder if the curse of God fall heavy on their overloaded stomachs? And this is the everyday fare of the everyday tropical tourist—and it's a small thing compared to what is provided for luncheon, and as nothing to the monster that greets you for dinner at an hour when rational folk should be going to bed. So here's the breakfast bell—and more tomorrow!

COLOMBO, CEYLON.

The Postal Savings Bank

BY THOMAS H. CARTER

UNITED STATES SENATOR FROM MONTANA.

THE Postal Savings Bank bill recently passed by the Senate is now being considered by the Committee on Post Offices and Post Roads of the House of Representatives. It is fair to assume that differences of opinion disclosed in the Senate debate are reflected in the committee, but of late active opposition to the bill has abated. Organized crusades against the measure seem to have been abandoned, and the great weight of public opinion is undoubtedly settled in its favor. The principle being approved, the only issue remaining involves details concerned largely with the disposition of the money when deposited with the postmasters. It is predicted that the aggregate of the deposits will ultimately reach from $500,000,000 to $1,000,000,000, and if that large amount is drawn from the same general sources in this country that supply the postal deposits in other countries, the fund will be made up largely of money now idle or in hiding.

Admitting it desirable to extend the privileges of a postal savings system to the people, the bill would pass and become a law very promptly were it not for the controversy growing out of conflicting opinions as to the disposition of the money by the Government. According to one view earnestly advocated, all the deposits excepting only a necessary reserve for the needs of current business should be invested in bonds or other securities of the United States, or in such bonds or securities as savings banks are permitted to purchase under the laws of the respective States. It is contended that this would impoverish the circulation thruout the country by withdrawing a large amount of loose change from each locality, and that to avert this, the money, when received at the post office in a given town, should be deposited at once in the local bank; and some go so far as to insist that the trustees in charge of the deposits should not be permitted to withdraw moneys from the local banks except to pay postal depositors or interest on their deposits. The advocates of this last suggestion are compelled to admit that the constitutional right of the Government to receive deposits at the post offices for the sole purpose of redepositing the same in banks is very questionable. Able lawyers, whose opinions are entitled to the highest consideration, maintain that there is no constitutional warrant for any such proceeding. Clearly, the relation of debtor and creditor would exist between the depositor and the Government, or, in other words, the

Government would, thru the postmasters, borrow from the people, and it is insisted by those who raise the constitutional question that money can only be borrowed for public purposes, and that where the act authorizing the loan shows upon its face that the loan is sought to serve purely private ends it would be held unconstitutional.

The fate of the Postal Savings Bank bill depends upon the harmonizing of these conflicting views. The bill as passed by the Senate provides for deposits in the local banks subject to prescribed conditions, and further provides that in time of war or other exigency involving the public credit, the funds may be invested in bonds or other securities of the United States. It will be observed that this gives only a remote flavor of public purpose, which is not satisfactory to the advocates of investment in Government bonds in preference to any other disposition of the funds. Henceforth, the controversy will center around the proposal to so amend the bill as to leave the trustees at perfect liberty to invest in Government bonds whenever and to such extent they may think proper. Many apprehend that if left unrestrained by law the trustees might be tempted to concentrate the deposits in the large financial centers in aid of speculation or large business operations; and while fear in this particular is based upon the violent assumption that the Secretary of the Treasury, the Postmaster-General and the Attorney-General would be disregardful of the public interests, there is sufficient in it to justify such restrictions as might be necessary to forestall any such result.

The advocates of the postal savings system have such confidence in the beneficent results destined to flow from its establishment that they will be found disposed to yield many minor points in order to succeed. The President is an ardent advocate of the system and a firm believer in the doctrine that it is the duty of a party to redeem its pledges made to the people. In consequence, President Taft may be relied upon to use every influence of his great office which can be properly employed to forward the measure. Many Republicans who doubt the wisdom of the departure so far respect the party pledge that they will, in the end, acquiesce in the passage of the bill in such form as may fairly meet their views. It is quite likely that a caucus of the Republican members will be convened for the purpose of exchanging opinions and seeking a common ground upon which all can stand in support of the bill. Assured as it is of the cordial support of the Administration, the earnest advocacy of many, and the disposition of all Republicans to redeem the party pledge, the Postal Savings bill will probably become a law before the close of this session of Congress.

The pending bill provides the simplest form of postal savings depository ever known. It is free from complications and strictly limited in extent and scope to the needs of laborers, school children and others who have no bank accounts, as a rule, and whose deposits and business relations are so limited as to be of little concern to the average bank.

Under the bill only individuals over the age of ten years can open accounts, and no individual can have more than one account; monthly deposits may not aggregate more than $100 and the total deposit to the credit of any one individual can never exceed $500 exclusive of accumulated interest.

In Great Britain the postal savings system, which has been in operation since 1861, goes far beyond the limits prescribed by the Senate bill. In the United Kingdom individuals, friendly societies, charitable societies, penny banks, registrars of county courts, schools, and soldiers wherever in service may deposit, and trades unions are allowed to invest their funds to the extent of $1,000 in any one year, or a maximum of $5,000 in all. Many of the penny banks deposit all their funds in the postal banks, and the funds of the county courts so deposited reach large amounts. Interest is paid at the rate of 2½ per cent. There are over 11,000,000 depositors with aggregate deposits of approximately $800,000,000.

In France the post offices receive deposits from individuals and also from associations, and may accept gifts and legacies.

In Italy the postal system offers broad inducements to depositors. Money paid into courts of justice is deposited in post

office savings banks, and dividends on Government securities are collected and converted into deposits; lottery prizes are collected and deposited; special facilities are afforded for the small savings of school children, and Government bonds are purchased for depositors. From 1876 to 1899 the Italian post office banks made a net profit of over $5,000,000 on current deposits together with an additional sum on business from courts of justice, making an aggregate of $6,500,000.

In the United Kingdom, France and Italy the postal deposits are invested in Government securities, and this is true as to Sweden; but in addition to Government securities Sweden invests these deposits in securities of Swedish general mortgage banks and direct loans to Swedish towns, and the bank will at any time, without cost to the depositor, convert his deposit or any part thereof into these securities. Since the organization of state insurance in 1903, the post office savings banks of Sweden collect insurance premiums and make payments on account of the insurance fund.

In Austria the funds are invested in interest-bearing Austrian securities, and within the last twenty-five years in addition to paying all expenses and placing nearly $1,000,000 in the permanent reserve fund, the postal savings system has enriched the treasury to the extent of approximately $8,500,000. A checking and clearing department has been in operation in connection with this system for a long time. The privilege of using the postal savings banks has been extended to the ships of the imperial and royal navy, and more than 12,000 corporations and societies—philanthropic, religious and otherwise—keep their accounts in the postal savings banks. These include trades unions, school clubs, fire brigades, parish fund committees, workhouse and relief funds, etc. Since 1901 the postal system loans money on mortgage security and gives discounts to depositors on Government securities and stocks of various states of the empire. Rural letter carriers are authorized to accept deposits.

From these suggestions it will be perceived that without any protest from the banking interests the postal savings system has been projected into the business activities of other countries far beyond the limit prescribed by the Senate bill. That measure proposes to establish the system on the simplest possible lines, so as to extend savings bank facilities to all parts of the country for the benefit of those desiring to save small sums. Any reflecting person will readily admit that the encouragement of thrift conforms to the highest order of sound public policy, and it is difficult to understand how any one can object to a measure which has this purpose in view. Worldwide experience bears most ample witness to the beneficent results and the eminent success of the system. It has been for a long time and is now in successful operation in the United Kingdom, France, Italy, Sweden, Canada, Austria, The Netherlands, Belgium, Hungary, Japan, Egypt, Russia and the colonies and dependencies of each of the countries having possessions or territorial jurisdiction beyond the limits of the parent state.

No better evidence of the soundness and public appreciation of the system can be adduced than is to be found in the steady growth of deposits. In the United Kingdom there were 178,495 depositors in 1862, with deposits amounting to $8,264,392, and the depositors steadily increased until in 1908 they numbered 11,018,251, with total deposits amounting to $781,794,533, an increase in the amount of deposits of nearly 95 per cent. France had, in 1882, postal savings bank depositors numbering 211,580, with deposits totaling $9,187,116, while in 1908 the depositors had increased to 5,291,673, with deposits of $296,641,000. In 1876 in Italy 57,354 persons had deposits amounting to $471,577, while in 1908 the depositors numbered 4,981,920, and deposits had grown to $290,808,886. In Sweden, in 1884, there were 79,513 depositors, with $221,808 on deposit, and in 1907 the number had increased to 566,976, with deposits of $13,582,491. Postal savings depositors in Canada in 1869 numbered 7,212, with $856,814 on deposit, and in 1908 they numbered 165,691 depositors, with $47,564,284 on deposit. In 1883 Austria had 352,886 depositors, with deposits aggregating $1,624,707, and in 1908 2,106,539 depositors, with $46,009,897 on deposit; while

the checking accounts in postal savings banks in that country increased from 167 depositors, with $44,250 of deposits, to 86,560 depositors, with $65,467,500 of checking deposits during the same length of time. In 1881 The Netherlands had 22,831 depositors, with $345,166 on deposit, and in 1908 depositors numbered 1,401,670, with $59,499,168 on deposit. In 1870 Belgium's depositors numbered 4,416, with deposits of $171,985; in 1907 depositors numbered 2,106,237, with deposits of $134,040,979. Hungary, in 1886, had 85,517 depositors, with $572,863 on deposit, and in 1908, including both savings and checking accounts, the depositors numbered 701,790, with total deposits of $33,362,725. Japan makes a showing of 1,843 depositors in 1875, with deposits of $7,582, and 8,013,193 depositors in 1908, with $46,275,301 on deposit. Egypt, in 1901, had 6,740 depositors, with $234,753 on deposit, and in 1908 there were 86,728 depositors, with $1,986,755 on deposit. In 1893 Russia had 240,000 depositors, with $14,471,500 on deposit, which number had increased in 1907 to 1,788,990 depositors, with $128,873,169 on deposit.

It is unnecessary to pursue the course of undeviating success. Wherever the system has been established it has enjoyed merited confidence and healthy growth. After brief trial in this country it will be difficult to find any one willing to admit ever having opposed the Postal Savings Bank bill.

WASHINGTON, D. C.

The Reformation of Islam

BY A MEMBER OF THE TURKISH PARLIAMENT

[No more amazing revolution in the world's history, unless it be that which is giving Western civilization to Japan and China, now demands consideration of intelligent people than that which is attempting to do this same work for all Mohammedanism, thru constitutional liberty in Turkey. The article which follows is a sermon delivered by Mr. Eobedulla, a member of the Turkish Parliament, in the Mosque of St. Sophia in Constantinople, next to that in Mecca the greatest of all mosques, as it was once the greatest of all Christian churches. To his argument that the Law, that is, the code embodied in the Quran, will allow popular government, hitherto so utterly denied, he brings the support of the Sheik-ul-Islam, the head of the Mohammedan community in Turkey. This sermon is the most interesting utterance of the kind that has come under our observation. The translation is by the Rev. M. G. Papazian.—EDITOR.]

SOME people doubt whether a constitutional government can be harmonized with the law of Islam. They question the legitimacy of running the government in co-operation with men professing another religion than our own. The Declaration recently prepared by the Sheik-ul-Islam, and forwarded to all sections of the Ottoman Empire, was promulgated with a view to correcting this notion. The first thing challenging our attention in that Declaration is the question of sovereignty in a government. Where does sovereignty reside? Since the aim of any government should be the happiness, peace and well being of the people, sovereignty must rest with the people, not with the Padishah. The Padishah is the servant of the people. Under the former regime the Padishah was sovereign, the people mere servants. Nobody dared to open the mouth. Everything was done according to the supreme pleasure of his Majesty. But Islam does not believe this. The Padishah is entrusted with the duty of ministering to the well being and peace of the people. The Padishah is not supreme, but subject. The people are supreme.

Again, some people suppose the object of the government to be to secure the living of a certain class. The officials from the highest to the lowest were of this opinion, nor have they yet changed their minds. Those who have lost their positions in consequence of recent reforms in administration are heard invariably complaining. "I have been in the service of the government for

twenty years, and now that I am out of office I ought to be supported by the State." Rather they ought to say: "For twenty years I have lived upon the State in parasite fashion. It is long enough." Who ever heard of an official accepting office with the desire to serve the State? Every one has sought office with an eye upon comfortable living and graft. It is forgotten that the government is not an organization for insuring the support of a certain class, but a mere servant of the people to assist them in the effort to secure a livelihood. Officials ought to regard the office as a ministry, yea, a worship; and history is our witness that Islam made its successful march toward the heart of France during the period when officials were accustomed to look upon their offices as an act of worship.

We now come to the question, whether the Mohammedan law may be reconciled with the idea of constitutionalism. It was after centuries of struggling and experimenting that Europe discovered constitutionalism to be the best form of government. The past two centuries have witnessed the establishing of constitutional government in England, France and other countries. Some of our own people recently having visited Europe and having been convinced of the benefits of constitutionalism have returned home to establish the same in our own country. Some men among us are of the opinion that this European style is alien to the genius of Islam, and consider any appropriation of European thought an act of blasphemy. They are in error. We indeed imported constitutionalism from Europe on being convinced of the efficiency of the system by the study of books on sociology. But while Europe learned the import of constitutionalism two hundred years ago, Islam learned and taught it thirteen hundred years ago. Wherever the Mohammedan law gives specific directions as to affairs of the state, as to marriage, as to inheritancy, etc., such injunctions are addressed, not to the Padishah, not to the posterity of the Prophet, not to the Caliph, but to the people. Tho the word "Parliament" does not occur in the law, the system is there.

One may ask: "Why, then, has not the world of Islam adopted constitutionalism earlier?"

The reason is that the common people do not understand the Holy Quran; they are in ignorance about the divine law. The Quran being written in the Arabic language, is unintelligible to the Turks. It must be rendered into the Turkish tongue before people can learn their obligations and privileges. There can be no reasonable objection to translating the Quran into Turkish. Divine revelation can make no discrimination between Arabic and Turkish. The Quran was given by God in Arabic because the Prophet was of the Arab stock. It should be printed in Turkish for the sake of the Turks. Unless we can read the Quran in our own tongue we must live in dark ignorance. Ignorance has driven our people into fanaticism. Many Europeans say of us: "Moslems are barbarians, Moslems are savages, Moslems cannot be reformed, Moslems are not capable of civilization." As long as we remain in ignorance we deserve all this condemnation, and must some day forfeit our own land.

The law is a way pointed out by God for the happiness of man. It distinguishes the right from the wrong, enjoining the former and forbidding the latter. The law was given unto the end of human welfare and comfort. Mohammed, our Prophet, says somewhere: "If any one should give you a good commandment in my name, even tho I have not given it, do it; but if another should give you an evil commandment, even tho he may say the Prophet has given it, do it not. I never command that which is evil." Constitutionalism is a good thing. We ought to adopt it. See, we are indebted to it for the mere fact of this assembly. Constitutionalism is freedom. The law of Islam commands freedom. You have no right to persecute a person because of his believing otherwise than you do. It is God's function to guide men to truth. What right have you to judge or oppress a fellow man because of his differing from you in thought? You may tell him what you believe, but may not oppress him. Man is not the master even of his own thoughts. The thought is the master of

the man. It is the prerogative of God to govern the thoughts of men. The Mohammedan law confirms this, and constitutionalism is based upon this freedom. Under it everybody is at liberty to serve the public by expressing his own thoughts, which is a very useful device. If the Caliph, even the Sheik-ul-Islam, should make a declaration not in accord with the law, or not subservient to public welfare, it becomes the people's duty to remind him of the requirements of the law.

Moslems fall into fanaticism by reason of ignorance, and fanaticism leads them to consider many non-essential things as unlawful, all of which results in the arresting of progress. Many things, for instance, eating the food with the fork, wearing long hair, etc., commonly considered unlawful, are not such at all. We lay the charge of sin and blasphemy upon people practising such habits as these which are of no consequence. Let me tell you what sin is. Ignorance is sin. Intolerance is sin. Some of us considering the study of astronomy and other sciences as unlawful have lived in ignorance. A sacred tradition says: "I have appointed all things in Heaven and on earth for your good." If the term "your" signifies the entire human race, the Moslems of today must be classified outside humanity, because they do not avail themselves of all the things "in Heaven and on earth." If it signifies exclusively the Moslems we may not be called true Moslems. Why should we not avail ourselves of the air by the use of balloons and of the stars thru the study of astronomy? To claim that such sciences are alien to Islam amounts to denying ourselves the right of being human. I will even dare to assert that the study of geography is a religious duty. One ignorant of geography may confound his very worship by not knowing how to take the right direction in prayer.

Some people, on the other hand, have taken pride in arguing that Islam does not impede civilization and progress, but any such statement adds nothing to the glory of Islam. Religion means a way, a road which leads to well being and prosperity, and, of course, the religion of Islam cannot be an obstacle to progress, yea, rather it must be an incentive to progress. Otherwise it would be good for nothing. As a matter of fact, Islam is a great power pushing man to progress.

CONSTANTINOPLE, TURKEY.

Why I Voted the Socialist Ticket

BY NICHOLAS VACHEL LINDSAY

I AM unjust, but I can strive for justice.
My life's unkind, but I can vote for kindness.
I, the unloving, say life should be lovely;
I, that am blind, cry out against my blindness.

Man is a curious brute—he pets his fancies—
Fighting mankind to win sweet luxury.
So he will be, tho law be clear as crystal,
Tho all men plan to live in harmony.

Come, let us vote against our human nature,
Crying to God in all the polling places
To heal our everlasting sinfulness,
And make us sages with transfigured faces.

SPRINGFIELD, ILL.

Literature

The Education of Women

THIS is a subject on which more nonsense is written than almost any other. It is still regarded by most people as an open field for purely imaginative speculation regardless of the experiential evidence which has been accumulating for more than a generation. It is fortunate, therefore, that we now have some of this evidence brought forward and discussed in a sensible way by two women who are able to speak from intimate knowledge of the workings of the coeducational system in the leading State and endowed university of the Middle West, the Universities of Wisconsin and Chicago. The question of the segregated colleges is becoming of comparatively little importance, for about six times as many women and three times as many men are being educated in coeducational as in segregated institutions.

Mrs. Olin has made a thoro statistical study of educational conditions in the University of Wisconsin[1] for half a century. The narrative has its amusing aspect, for it shows how flimsy and manifold are the disguises which have been from time to time assumed by the opponents of women's education to mask crude conservatism and intolerance. For example, they at first professed to fear that women could not stand the strain of continuous study. Such solicitude for the health of the weaker sex is all the more commendable since it has rarely in the history of the world been manifested in connection with the other occupations such as housekeeping and factory work. But Mrs. Olin shows that the women students lose fewer class exercises from sickness than the men, that a larger proportion of them endure to the end and that the mortality of the women in after life is less. Of the graduates of the University of Wisconsin from 1869 to 1906, 6.2 per cent. of the men have died and 4.8 per cent. of the women. Altho there are many unknown factors involved in this it certainly does not indicate the fatal "breakdown in after life" so commonly prophesied.

Nowadays the complaint comes from the classicists that the women are "crowding out" the men from their half-emptied classrooms. Unfortunately for this argument Yale, Harvard, Princeton and Columbia find it impossible to keep their men from deserting to other departments, but they cannot lay the blame on the women. As W. D. Howells puts it, "Our women really have some use for 'the education of a gentleman,' but our men have none."

The experience of Wisconsin is particularly interesting because coeducation was adopted there after segregation had proved a failure, altho for ten years earnest efforts were made to maintain separate classes or colleges. Nothing in the history of the university since 1870 gives any warrant for the attempt of President Van Hise in trying to reintroduce partial segregation. This attempt, however, resulted in good, for it brought about an investigation of the question whose results are embodied in this book and also caused the legislature to nip the anti-feminist movement in the bud by the passage of a law providing that:

> "All schools and colleges of the university shall in their respective departments and class exercises be open without distinction to students of both sexes."

The book is not a mere plea for coeducation, for Mrs. Olin discusses frankly the abuses of the system, especially the tendency to excessive social activity. It is a volume which should be upon the open shelves of all college libraries.

Dean Talbot, of the University of Chicago, in a somewhat smaller volume takes a broader survey of *The Education of Women*,[2] discussing in a very sensible and even tempered way the changes which have taken place in the position and duties of women and the educational needs which are thereby necessitated.

[1] THE WOMEN OF A STATE UNIVERSITY. *By Helen R. Olin.* New York: G. P. Putnam's Sons. $1.50.

[2] THE EDUCATION OF WOMEN. *By Marion Talbot.* Chicago: University of Chicago Press. $1.37 postpaid.

She urges the importance of more specific preparation for the life work of woman, both for the handicrafts that are now left to her in the home and for the duties that inevitably devolve upon her. She shows that the women's colleges are far behind the coeducational in providing training most needed by women, such as household economics and eugenics.

In the University of Chicago the reactionary influences have been more strongly felt than in Wisconsin, and as the State Legislature could not come to the rescue, a partial segregation of the lower classes has been introduced. Otherwise the women are admitted freely and on equal terms to all departments and are making a good record for the sex. The last point that the believers in the mental inferiority of women stick to is that women are essentially lacking in the ability to do original work, such as is required for the doctorate. But in the University of Chicago the higher the honor given for successful research the larger the proportion of women. Women have there constituted 15.6 per cent. of the total number of doctors; 8.9 per cent. of the *rite* grade; 10.8 per cent. of the *cum laude;* 15.5 of *magna cum laude,* and 20.7 of *summa cum laude.*

Records of the Life of Jesus

THE application of critical methods to the study of the New Testament has seemed to many a step of doubtful expediency. A majority of those even who accept the results of Old Testament criticism have hoped that the sacred precincts of the New Testament, and especially the Gospel records, might remain free from invasion. But the problems connected with the life of Jesus are of such transcendent importance in the religious world that a thoro investigation of all the evidences bearing upon it has become an absolute necessity. In regard to so vital a matter thinking men are no longer contented to accept without protest either the conflicting testimony of tradition, which can lead only to confusion, or the wild conjectures of opponents to faith. Fortunately Old Testament study has dispelled the illusion that criticism seeks only to destroy, and now the best equipped Christian scholars, wholly in sympathy with the spirit of Christianity, and intent on the exaltation of its truth and power, are devoting their energies to a careful examination and reinterpretation of every portion of the Gospel records. One of the fundamental problems in the study of these records is that of the relation of the Fourth Gospel to the other three. The difference in their treatment of the life of Jesus is so great that Loisy has declared that "if Jesus spoke and acted as he is said to have spoken and acted in the first three Gospels, he did not speak and act as he is reported to have done in the Fourth." Until recently the view of Jesus presented in the Fourth Gospel has been quite generally regarded as more accurate because written by an intimate associate. It is well known that the first three Gospels, altho earlier than the Fourth, were not written by eye-witnesses. If, therefore, the traditional authorship of the Fourth Gospel by John breaks down, a revolutionary change in the conception of New Testament beginnings is bound to follow. In his new volume on *The Fourth Gospel,*[1] Professor Bacon, of Yale, attacks this problem of authorship with his customary vigor, thoroness and critical insight. Taking his stand against the traditional view, he writes as a partisan in debate, and this leads to some rough handling of his opponents, the so-called "defenders" of the Gospel. But ont cannot wholly condemn his occasional shafts of irony and sarcasm when he recalls the fact that the self-styled "defenders" have not failed to seek adherents to their cause by stamping those who disagree with them as "opponents of revealed religion." Professor Bacon, however, does not stop with merely pointing out weak places in the arguments for Johannine authorship. With patient care and critical skill he examines every scrap of evidence, external and internal, direct and indirect, which has a bearing on the subject. His conclusions are generally as well sustained as they are interesting. The evidence, he believes, goes to show that John, the son of Zebedee, never visited Asia

[1] THE FOURTH GOSPEL IN RESEARCH AND DEBATE: A Series of Essays on Problems Concerning the Origin and Value of the Anonymous Writings Attributed to the Apostle John. *By Benjamin Wisner Bacon, D.D., LL.D.* New York: Moffat, Yard & Co. $4 net.

Minor, where the Fourth Gospel originated, but died a martyr in Jerusalem at the hands of the Jews before the fall of that city in 70 A. D. This "Ephesian" Gospel, Dr. Bacon holds, was written about the second decade of the second century by some Ephesian "elder," who had, on a pilgrimage to Jerusalem, become familiar with several of the Gospel sites along the route. He relied largely on the Second and Third Gospels for his historical facts, but made corrections in accordance with the Ephesian Church usages, and under the inspiration of Pauline thought restated the traditions of Jesus's words and deeds in such a way as to bring out their "spiritual" value. The rise of the tradition attributing the Gospel to John is very ingeniously traced and accounted for by Dr. Bacon. This book is far and away the best and most convincing that has ever been written against the traditional authorship, and it is hard to see how its main contentions can be overthrown with the materials the traditionalists now have on hand. Unless other and more telling evidence can be found than that already known, it seems that the fight for the Johannine authorship will have to be given up. Fine examples of Professor Bacon's unusual power and equipment for the task of this book are to be found in his convincing arguments for Gaius's rejection of the Fourth Gospel, and his short but illuminating discussion of Quartodecimanism. If one were disposed to find fault with a work of such great learning he might point out places where the author's confident conjectures have too narrow a foundation in objective reality, and detract rather than add to the cogency of his arguments. Neither does similarity always signify literary dependence, as Professor Bacon too often supposes. The origin of the story of Peter's walking on the sea may be in that disciple's denial and recovery, but one needs more proof than mere assertion to be convinced of it. Nevertheless, such overreachings of the critical imagination are but spots on the sun when compared to the masses of facts collected, sifted and marshaled in his arguments. No New Testament student can afford to neglect this epoch-making book.

In his *Beginnings of Gospel Story*[2] Professor Bacon takes up in the same critical way the exposition of the Gospel of Mark. The text of the revised version is used, with Professor Bacon's analysis of the sources and the parallels from the other gospels indicated in the margin, and expository notes at the bottom of each page of text. Preceding the divisions and sections of the gospel there are introductions, paraphrases and critical comments. Professor Bacon regards Mark as a composite work, relying mainly on a simpler Petrine narrative and the sayings of Jesus frequently designated by Q (German *Quelle*). The "Redactor," Dr. Bacon thinks, was dominated by an anti-Judaistic and Pauline point of view, which would be congenial to the atmosphere of the Roman Church where the Gospel originated. It is difficult to follow the author in many of his conjectures as to sources and influences. This search for influences may sometimes lead to palpable error. According to the note on 1:10 Mark's "rent asunder" is assimilated (supposedly from Q, used by Matt. and Luke) to Isaiah 64:1. But Professor Bacon has already indicated the fact that Mark uses the Septuagint, and altho the English translation of the Hebrew text of the Isaiah passage agrees with Mark, the Septuagint agrees with Matthew and Luke, showing that those Gospels rather than Mark did the assimilating. The user of Professor Bacon's book will find criticism raised to the *n*th power, but if he does not become confused he will extract a good deal of valuable information about the historical and literary background of the Gospel story.

Quite as important as the preceding books in its bearing on the Gospel records is a volume by Professor Sharman, of the University of Chicago, who has made a comparative study of all the passages in the first three Gospels which are in any way related to *The Teaching of Jesus About the Future*.[3] The author

[2] THE BEGINNINGS OF GOSPEL STORY: A Historico-Critical Inquiry into the Sources and Structure of the Gospel according to Mark, with Expository Notes upon the Text, for English Readers. *By Benjamin Wisner Bacon, D.D., LL.D.* New Haven: Yale University Press. $2.25.

[3] THE TEACHING OF JESUS ABOUT THE FUTURE, ACCORDING TO THE SYNOPTIC GOSPELS. *By Henry Burton Sharman, Ph.D.*, Instructor in New Testament History and Literature in the University of Chicago. Chicago: University of Chicago Press. $3.26 postpaid.

accepts Professor Burton's analysis of the Gospels, who finds a Galilean and Perean document used by Luke and Matthew besides the Markan source used in both those Gospels and the Logia used in Matthew alone. By comparing the different versions of the sayings of Jesus as they occur in these Gospels and documents, Professor Sharman has tried to recover the originals. The author has done a most careful, scholarly and judicious piece of work in objective criticism. The results of this study are many and valuable. Many of the contradictions which lead to confusion and obscurity in regard to the character of Jesus fall to the ground, and one sees the Man of Nazareth definitely related in his outlook and teaching to the movements of his time. Discrepancies between his predictions and the history as we know it turn out often to be misunderstandings on the part of his early interpreters. Many will rejoice that Jesus's supposed approval of the Jonah-in-the-whale story is shown to be an editorial note, really out of harmony with his thought and purpose, and not a few will feel relieved to learn that Jesus himself never spoke of his "coming" (*parousia*) and "the end of the world." The evidence against the fact of his ever having used the word "church" is overwhelming, and the famous passage about its foundation on Peter comes not from the lips of the lowly Nazarene but from the heart of human ambition.

These three books are a credit to American Biblical scholarship and make no inconsiderable contribution to the progress of New Testament study. While much remains to be done in Gospel criticism, rich results of this labor are already apparent. The subjection of these records to careful examination shows conclusively that each one of the Gospels is an interpretation of the character and work of Jesus, based on earlier documents, historical facts, and the Christian experience of the interpreter. Viewed as interpretations of Jesus's person, power and purpose, the Gospels may lose some of their historical trustworthiness, but the gain in clarity and firmness of the reconstructed historical background and the enlargement of the spiritual and inspirational contents more than compensate for the momentary loss of objective authority.

An Interrupted Friendship. By E. L. Voynich. New York: The Macmillan Company. $1.50.

This is the poignant story of a man caught in the path of two meteor natures. The interest, however, lies not so much in his fate as in the psychological effects of suffering upon the two people he has sought to shield with his devotion. The one, his crippled sister, chooses the more conventional rôle of invalid variably irritable and cheerful, with one of those sapping, leech loves for this brother, who observes no economy in presenting her with the total of his life. To obtain money for an operation which may result in her cure he leaves his home in France and goes with an exploring party into the interior of South America. There he meets the other mutilated life which his love seeks to mend and complete. Mrs. Voynich has in this second character demonstrated the psychic results of a too perfect mental control of physical suffering. In Felix Rivarez that nonchalant composure under torture which he had originally practised for protection grows to be not a virtue, but a conceit to which he sacrifices every normal inclination. It becomes his particular form of dissipation, and when the doctors tell him that his disease has been checked, he is like a disgusted hunter who has gone out to kill tigers and finds them friendly, rubbing against his legs. Some tragedy in his past, with which the author whets one's curiosity but which she never quite reveals, has led him to acquire that least human quality—self-containment. And those energies which he should have expended in living and loving, like the other men about him, he exhausts in building him an isolated barricade of stoical suffering, from which he peeps with sardonic eyes at God, man and the devil. When he and the invalid sister meet the attraction of the two is like the flash of poison-tipped rapiers in a mortal duel. In the course of the relationship he comes to believe that the brother has betrayed his confidence to the sister. He seizes with avidity upon this remaining opportunity for pain, renounces friend-

ship, and flings out of the story with cynical and melodramatic despair. He passes thru the book like a blight, leaving the woman strengthened and hardened by a vicious and repellant wisdom which forever protects her from the chance of loving again. In the meantime, the brother, tho he has given most and lost greatly, is probably the only one who comes out with anything added to him. Most of the characters suffer from subtraction. He has learned that love is every man's Pandora's box, not to be opened and despoiled for the benefit of brilliant hypochondriacs wih the octopus capacity for grasping.

The Thief of Virtue. By Eden Phillpotts. New York: John Lane Company. $1.50.

Hitherto in Mr. Phillpotts's novels the salt smell of the sea has drifted thru the pages like the sweet perfume from a woman's garments. In this story, however, the author has deprived the reader of this last remaining esthetic comfort, and written a Dartmoor romance of a bleak people becoming bleaker as he wrapped the gray scenery of the moors about them, and bound them with religious asceticism. Marital infelicity is the whirligig upon which he sticks innumerable details which serve in no way to advance the story. The pivot of this tragedy is the vain endeavor of a father to win the affection of a child he believes to be his, but who is in fact the son of his wife and her lover. Mr. Phillpotts has made the mistake of thinking the reader interested in his people when in reality they must have the mask of the sea to save them from the hopeless triviality of ordinary life. The one virtue of this book is that its dinginess has been magnified into a dignified gloom.

This Misery of Boots. Socialism and the Family. By H. G. Wells. Boston: The Ball Publishing Co. 50 cents each.

These are two booklets on Socialism by the author of "Anticipations" and "A Modern Utopia." In the first, he interprets social conditions in terms of footwear. From the sort of shoe one wears he infers the man's well or ill being, and from this starting point he plunges into a disquisition on social ills and the remedy, Socialism. It is an attractive piece of writing. The other booklet is made up of two papers, only the second of which has much to do with the attitude of Socialism toward the family. But he takes pains to deny emphatically that Socialists in any considerable number favor "free love." What he insists upon is that the patriarchal family, with the husband and father as sole head, is already in process of extinction; that Socialists favor a greater regulation of the birth function than now obtains, and that state maintenance of mothers is absolutely necessary to bring about the economic freedom of women. There is nothing novel about any of these contentions, tho Mr. Wells seems to think they are discoveries of his own.

Prophecy and the Prophets in their Historical Relations. By Frederick Carl Eiselen. New York: Eaton & Mains. $1.50 net.

One who sets forth to gain some knowledge of the prophetical writings of the Old Testament needs some man or book to guide him. He might select two or three commentaries on a single prophet and make a thoro study of one book, but a better way would be to take a general and elementary treatise, like this of Professor Eiselen's, which states succinctly the historical setting of the several prophets in chronological order, analyzes briefly their contents, and draws out their principal teachings for their own time and for all times. Professor Eiselen's introduction is not too difficult for the ordinary reader, but one who gives reasonable pains to its study will derive a far more complete and accurate knowledge of Hebrew prophecy than is had by the majority of confirmed Bible readers. He has a skilful method of presenting critical views, and even a student of conservative mind will not be offended by his manner of teaching the truth about deutero-Isaiah, the late date of Daniel, and the parabolic character of the Book of Jonah.

Literary Notes

....England is catching up. Now that the London *Times* has added a woman's supplement we may expect that *Punch* will ultimately publish a comic supplement.

....An annotated edition and translation of

Strabo's Geography is in the course of preparation under the editorship of Dr. Charles H. Weller, of the University of Iowa, and with the co-operation of twelve or more American scholars who have studied at the American Schools of Athens, Rome and Jerusalem.

....We receive from Eizo Yumada and Muneyasu Oki, Tokyo, Japan, *The New School of Japan*, which is a long folio volume, which proposes to introduce new Japanese letters for the present cumbrous system. The aim is admirable, for the need is great; but we cannot regard the scheme suggested as adequate or wise. Instead of an alphabetic system, the authors propose a syllabic one, and this requires 47 simple characters, 25 modified ones and 34 modified combinations. This is going back to the discarded schemes of ancient nations when they first tried to simplify their hieroglyphics. In both China and Japan the roman letters are being somewhat used, and this is far better, and it fits the world's alphabet.

....The "world's classics" have been selected and collected so often that the task of making a new collection of them offers no particular difficulties of inclusion or exclusion. No fault can be found, therefore, with the contents of *The Best of the World's Classics*, edited by Senator Henry Cabot Lodge and Mr. Francis W. Halsey. It is a satisfactory rapid survey from Herodotus and Cato to Howells, Bret Harte and Henry James, one volume being given to ancient Greece, one to Rome, four to England and two to America. Continental Europe is "polished off" in the remaining two volumes of the ten, France receiving the lion's share. No poetry is included. Of course, radical cutting has been resorted to in some instances. The print of these small volumes is remarkably clear, but otherwise they are not attractive specimens of book making. (Funk & Wagnalls Co., 16mo, 10 vols., $7.50.)

....The most that can be said for *The Temple Bible Dictionary* (Dutton, $4.00 net) is that it is well illustrated. The main articles are, with a few exceptions, written by men who are out of touch or out of sympathy with the best scholarship in the departments entrusted to them. Mistakes which show extreme carelessness or neglect are frequent. glaring inconsistencies with no explanation lead to confusion of thought, and sometimes an open disregard for the truth is apparent. "The ordinary reader," says Prof. Robertson, in his article on the Pentateuch, "wants to be assured that the account is substantially correct." Whatever wants in the way of "assurance" the "ordinary reader" may have, will be as fully supplied as possible in this dictionary, but as a help to an understanding of the Bible it has little value.

....Emma Huntington Nason's *Old Hallowell on the Kennebec* is the result of local pride, but also of local historical interest. The early fortunes of this trading post of the Pilgrim Fathers, founded in 1627, are shrouded in mystery, for the contemporary writings of Winslow, Governor Bradford and the other historians of Plymouth, are strikingly reticent on the subject, perhaps for fear of inviting competition in their profitable trade with the Indians by drawing attention to it. Mrs. Nason's only sources of information for these early years are the narratives of French voyagers and the relations of the Jesuit Fathers. The record is brought down in these pages to the incorporation of Hallowell as a town in 1852, and, of course, a good deal of space is devoted to the local first families, who have a right to it. They are divided into First Settlers, Representative Families and Later Representative Families, with a special chapter reserved for Chief Citizens. Church, school, the press, all phases of the life of the community are passed in review. The illustrations consist of views of the town and of reproductions of family portraits. (Augusta, Me., published by the author, 8vo, $2.50.)

Pebbles

You can jolly some people, but you can't Guy de Maupassant!—*Yale Record.*

We have our faults, but we have never ended a letter with "I will ring off now."—*Atchison Globe.*

Attorney-General Wickersham seems to have been only too successful in pouring oil upon the troubled flames.—*Boston Transcript.*

Tom.—"It was a case of love at first sight with me."

Jack.—"Then why didn't you marry her?"

Tom.—"I saw her again on several occasions."—*Chicago News.*

When there is a cow, Pa milks it, Maw takes care of the milk, and Daughter having named the cow Luella, or Irene, gets pay for her share of the labor by eating the cream.—*Atchison Globe.*

BRAINLESS.

"Would you marry for money?" asked one girl of another.

"Not I; I want brains!" was the reply.

"Yes, I should think so," said the first speaker, "if you don't want to marry for money!"—*Philadelphia Inquirer.*

Story for men only: "Pa," a boy said to his father, "are angels men or women?" "Always men, my son," replied his father. "But, pa," replied the boy, "I have never seen pictures of angels wearing whiskers." "Well," replied the father, "it is only possible for men to become angels by a close shave."—*Atchison Globe.*

A mother is loved for the same reason that the Old Flag is loved: as a matter of patriotic duty. But a father is never loved for such a reason; or for any other reason, for that matter. Ever know children to think much of their father? If he is poor, they dislike him because he isn't rich, and if he is rich, they pick at him because he doesn't divide his money. But a mother is always loved, as a matter of patriotism. There are two fathers in Atchison who couldn't be much better than they are, yet we have heard them both abused by their children.—*Atchison Globe.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The World Court

THREE weeks ago we raised some questions in regard to the organization of the Judicial Arbitration Court or Court of Arbitral Justice as proposed by Secretary Knox. We held that, while the creation of such a court would be a master stroke of diplomacy and might wellnigh inaugurate the reign of universal peace, yet the lesser nations would probably not enter it except as the equals of the great Powers, and this Secretary Knox did not propose to allow. We readily admitted that the proposed court was a great step in advance, but our chief objection lay in the fact that it would probably have to be utterly demolished and rebuilt on entirely new foundations before it could hope to obtain the adherence of all the nations of the world. The only question, therefore, in our mind was, Would the establishment of an international court, in which the great Powers of *today* should possess a *permanent* majority of the judges, hinder or hasten the establishment of a universal court—the Supreme Court of the world, which Elihu Burritt prophesied sixty years ago "would constitute when it came into existence the highest court of appeals this side the bar of Eternal Justice."

We have been charged, in our editorial of three weeks ago, with destructive criticism. What does THE INDEPENDENT suggest? our critics say. Has it a solution for the problem that failed at the Second Hague Conference, the problem how to apportion fifteen judges among the forty-six nations? If not, it should give unqualified acceptance to Secretary Knox's great proposal.

We restate and amplify, therefore, THE INDEPENDENT'S position. We hold that while the plan of Secretary Knox cannot be accepted as sufficient, yet he is entitled to the gratitude and support of all good people. The smaller nations can still make use of the existing Hague Tribunal of 1899 on which *every sovereign nation is equally represented.* Or they can set up any other tribunal that they may prefer, as the five Central American states have already done. The Knox court can hardly become an obstacle, therefore, to the further progress of arbitration among the Powers.

Furthermore, if constituted before 1915, as now seems most likely, the Third Hague Conference can then more easily develop and perfect it than it could create it anew if not already established.

For these and other reasons we applaud the Secretary of State for the forward step he is making and for the greater victories that will be made possible and perhaps near at hand by the success of this diplomatic stroke. At the same time we commend to Mr. Knox and to all interested in the cause of peace and justice, the suggestion for circuit or continental courts of justice, proposed in our issue of March 10 by Mr. Hayne Davis.

It is interesting to note the results of even a casual consideration of this suggestion. If each one of the nations at the Second Hague Conference appointed one international judge, there would be exactly forty-six. Let these forty-six judges be divided into nine circuits, based on geographical proximity and community of interests. They would naturally be composed of the following nations:

Asiatic Circuit—China, Japan, Siam.

Western European Circuit—England, France, Spain, Portugal, Switzerland.

Central European Circuit—Germany, Italy, Austria-Hungary, Montenegro, Luxemburg.

Baltic Circuit—Norway, Sweden, Russia, Denmark, Holland, Belgium.

Balkan Circuit—Rumania, Servia, Bulgaria, Turkey, Greece, Persia.

North American Circuit—United States, Cuba, Hayti, San Domingo, Mexico, Panama.

Central American Circuit—Salvador, Costa Rica, Honduras, Nicaragua, Guatemala.

Western American Circuit—Colombia, Ecuador, Peru, Bolivia, Chile.

Eastern American Circuit—Venezuela, Brazil, Paraguay, Uruguay, Argentina.

a particular case on appeal to the Supreme Court can strike off one or more of the judges, the vacancies thus caused to be filled from the circuit courts by mutual consent of or alternate selection by the litigant powers. Thus a nation situated in Europe, for instance, could eliminate Asiatic or American judges and substitute those European judges in whom it reposes the greatest confidence. Thus some of the safeguards of the jury system would become operative and the danger of prejudiced judgment be decreased.

Our Federal judiciary presents a strik-

THE NINE CIRCUIT COURTS OF THE WORLD.

The chief justices of each of the nine circuit courts, however elected, could constitute the international supreme court. Questions between states in the same circuit could come preliminarily before that circuit. The judges for each circuit concerned could sit for hearing a case between states in different circuits. From the decision of circuit courts, whether of one or more circuits, an appeal could be taken to the supreme court, composed as above suggested.

A desirable safeguard might be found in providing that each litigant power in

ing analogy to this proposal for an international supreme court and subsidiary circuit courts. Curiously enough, there are nine judicial circuits in the United States, including the forty-six sovereign States of the Union, and each of the nine chief justices is a judge of one of the circuit courts.

When there were only thirteen American States, it was agreed by the Constitutional Convention of 1787 that: "The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may

from time to time ordain and establish." One century has evolved an American judicial system with twice as many United States District Judges (ninety-two) as there are States in the Union today, and more than one-half as many United States Circuit Judges (twenty-nine), not to mention the United States Supreme Court Judges provided by the Constitution itself. In addition to these one hundred and thirty Federal judges, there are two hundred and forty-six judges of State Supreme Courts, and an even larger number of judges for State inferior courts. And yet this does not impair the efficiency of the Federal judicial system, of which the United States Supreme Court is the keystone. Apparently this bit of our history is sufficient to show that an international judicial system will have to include ultimately more than one court, whatever be the number of the international supreme court judges, and that in the final solution, the large number of sovereign nations will not prove an insurmountable obstacle.

Mr. Roosevelt's History of Civilization

No one can read the lecture which Mr. Roosevelt delivered at the University of Berlin last week and not realize that it is an extraordinary production.

Like all that Mr. Roosevelt does, it is conceived and carried out on a grand scale. The occasion itself was great. The largest university of Germany is observing its centennial year. The Emperor of Germany was the real master of ceremonies. The attention of the whole world was centered upon the place and the speaker. Whatever he might say would be received by the intellectuals of all lands as significant. Any man chosen to address a great and brilliant audience under such circumstances would naturally choose a large theme, and treat it in a bold and broad way. But there are not many men living who would have had the daring to choose the history of civilization from the beginning, and to handle it in such fashion as to lead up to a discussion of the three or four most vital problems of world politics at the present hour.

That Mr. Roosevelt's performance justified his temerity, we think, must be conceded. From beginning to end the lecture shows a firm grasp of the vast subject, a philosophic sense of proportion and an adequate mastery of up-to-date scholarship. The style has the rush and swing of strong and forceful thought; it repeatedly attains impressiveness and beauty. The statements and the solutions of great problems are at once scientific and statesmanlike.

We have tried to recall any equally comprehensive review of human interests by a public man of the first class in this or any other time, and without success. We believe that when it has been leisurely studied and estimated it will be acknowledged to be the most interesting swift survey and evolution of civilization that we possess. It will confirm the judgment of those who regard Mr. Roosevelt as easily America's most intellectual public man, whether or not he be our safest and sanest administrator.

No bit of historical analysis could be more admirable than the paragraphs in which Mr. Roosevelt shows the relation between an increasing complexity of human interests and the increasing rapidity of change. In terms of this relation he marks the successive stages from savagery to barbarism, from barbarism to civilization, from local civilization to empire, from empire to world civilization. On this analysis he builds his examination of the glory that was Greece and the grandeur that was Rome; and his yet more searching examination of the elements of strength and weakness of our Western civilization today.

Of this latter part of the address it would be difficult to speak in terms of exaggerated praise. There have been endless comparisons of existing tendencies with those which apparently brought about the downfall of Roman power, and the obscuration for a thousand years of the Greco-Roman light. But we do not recall any utterance in which both the differences and the resemblance between modernity and the classical world have been more discriminatingly set forth. And the two points that Mr. Roosevelt especially emphasizes, and upon which he builds his optimistic faith in the future of mankind, are certainly as pro-

found and as significant as he represents them to be.

The classical world did lose its zest for physical activity, its willingness to undergo rigorous physical disciplines, and it did fall back upon mercenary armies for both aggression and defense. Without sharing Mr. Roosevelt's emotional delight in things militaristic, we are quite ready to grant that a nation which maintains a citizen army thereby exhibits a very different physical and moral quality from one that depends on an army of mercenaries. We should have been glad if Mr. Roosevelt had pointed out that this difference in virility is quite as well shown also in the magnificent courage, fortitude and hardness of fiber displayed in the modern dangerous occupations of the merchant marine, the railroad service, the more strenuous mechanical employments, exploration and adventure, all of which must continue to call forth the best elements of manhood after war has ceased to be a supreme interest of the nations.

It is true also that it is no longer honorable to make the public career an opportunity for building up a private fortune. We are not quite sure, however, that in his remarks upon this particular point Mr. Roosevelt did not permit himself for the moment to be kindly forgetful of the careers of certain men who, to the national humiliation, are still nominally, if not as actively as of old, in public life at Washington. Yet this point we willingly waive, for no one more strenuously than Mr. Roosevelt has waged the war against privilege, or more remorselessly indicated the consequences of "predatory wealth" upon American civilization and character.

The general impression that will be made by Mr. Roosevelt's address will almost certainly be one of courageous and hopeful looking forward. It will convince most of its readers that its optimism is something much more substantial than the bubbling of irrepressible vitality. It exhibits a thoughtful weighing of evidences, a careful examination of the grounds of expectation. It shows that the foundations of civilization are in truth broadly and deeply laid.

We offer our sincere compliments to the large-minded man who has given us this broad and fine view of human history, achievement and expectation.

The Coronation Oath

Once more, after nine years, the coronation of a King of Great Britain and Ireland is the occasion of a heated religious controversy, one that adds a further complication to the political difficulties which, with the death of King Edward, attend the struggle over the Lords' veto resolution.

The trouble is caused by the existence of a law passed by Parliament in 1688, which requires the King on his coronation, or first appearance before Parliament, to make oath that he is not, either openly or secretly a Roman Catholic, and that he regards certain Roman Catholic acts of worship to be superstitious and idolatrous. As an evil inheritance of evil days that form of the Accession Oath has remained a law all these two centuries and a quarter, to insult a third of the King's subjects whenever a new sovereign was crowned. It created a very bitter controversy when Edward VII assented to it so unwillingly and mumblingly in 1901; and it is being more bitterly attacked now, and George V is trying again to be relieved of the requirement to perjure himself, or, at least, to escape the vicious affront. The oath he is required to take reads as follows:

"I, George, do solemnly and sincerely and in the presence of God profess, testify and declare that I do believe that in the Sacrament of Our Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ at or after the consecration thereof by any person whatsoever and that the invocation or adoration of the Virgin Mary or any other saint or the Sacrifice of the Mass as they are now used in the Church of Rome are superstitious and idolatrous, and I do solemnly, in the presence of God, profess, testify and declare that I do make this declaration and every part thereof in the plain and ordinary sense of the words read unto me as they are commonly understood by English Protestants, without any evasion, equivocation or mental reservation whatsoever and without any dispensation already granted me for this purpose by the Pope or any other authority or person whatsoever and without any hope of any such dispensation from any person what-

soever, and without thinking that I am or can be acquitted before God or man of any part thereof, although the Pope or any other person or persons or power whatsoever should dispense with or annul the same or declare that it was null and void from the beginning."

Such is the formula which will continue to provoke every new occupant of the English throne until Parliament amends or revokes the ancient law.

The proper thing to do is to repeal the law altogether, but the trouble about it is this, that by another anachronism the British Constitution makes the Anglican Church the religion of England and Wales, and another Protestant Church the religion of Scotland; while by a further ridiculous Erastianism the Sovereign is head of both these Protestant religions. Queen Victoria was an English Episcopalian when in England, but as soon as she crossed the Tweed to go to her Balmoral Palace she became a Scotch Presbyterian. Both these two Churches are Protestant, and by their ancient formulas of faith are violently anti-Papal, quite as positively so as is the Accession Oath. So long as the King is the ruler of two Protestant Churches, and himself selects for one of them all their bishops and both their archbishops, it is only consistent that these two Churches should be assured that he will be their faithful ruler, and that he will not make a "Papist" Archbishop of Canterbury.

So the root of the evil lies in the establishment of State Churches. But the old formulas of faith have ceased to be binding in either Church, tho still printed in Articles and Confessions. They ought to be revised or expunged there; but so long as they remain, and the King is an Episcopo-Presbyterian, it is logical that he be required to make a bigot if not a perjurer of himself once in his life. But logic based on bad premises is not everything, and if the Churches will not reform themselves it is time that the State correct its errors. But the trouble again is that the Church and the State are one, and that one the State. It is the State that must reform the Church.

King George asks to be relieved of this farcical mumble of insult to millions of his people. Mr. Asquith, as leader of the Liberals, and Mr. Balfour, as leader of the Conservatives, both say Yes; but there are bitter, uncharitable Churchmen who make a noisy row against the change. There is a "Protestant Alliance" which has challenged the Prime Minister with the reminder that "the Accession Oath is the law of the land and must not be interfered or trifled with." But they represent a minor, tho a pernicious, part of the people. The Catholics are in arms against the oath, and Ireland is loud against it. An amendment is proposed which will drop the bitter adjectives and leave the King to say simply that he does not believe in the Roman Catholic doctrines; but that is itself unsatisfactory. Nothing can satisfy but the entire blotting out of the religious oath. Parliament ought to take the drastic procedure; but few reforms go so suddenly. Parliament has removed nearly all other religious disabilities, but the King still suffers from the worst of them.

We do well to rejoice that our fathers had the intelligence and breadth to forbid by our Constitution the union of Church and State. That provision has saved us infinite trouble. Equally all the English colonies have followed our example, greatly to their advantage; and even Ireland has been freed from the yoke. It has been the curse of all the European nations, and it now torments England, with her educational disputes and now her Accession Oath. Absolute separation and absolute freedom of action to both Church and State should be the next step for British reform after deliverance from the dominance of hereditary peers in the House of Lords. The Church ought to rejoice as well as the State, if it could secure escape from its Erastian slavery.

The Railway Bill

MANY conflicting reports about the effect of the action of the Senate and the House concerning the Administration's railroad bill have been published. The bill, as amended, was passed in the House on the 10th by the votes of all the Republicans, insurgents included, and a dozen Democrats. It is pending in the Senate, where an amendment relating to charges for long and short hauls was unexpectedly adopted, last week, by the

surprising vote of 56 to 10. In the House there were important additions and omissions. Interstate telegraph and telephone lines, as common carriers, were placed under the control of the Interstate Commerce Commission, provision for a physical valuation of railroad property was made, and the railroads were forbidden to charge more for a short haul than for a long one. While nearly all of the important parts of the original measure were retained (the paragraphs creating a Commerce Court included), those sections which authorized companies to make traffic agreements and which related to mergers of railroad lines were cut out. These have also been withdrawn in the Senate.

Among the parts retained by the House are those which enlarge the Commission's power as to rates, authorize the Commission to suspend rates on its own initiative, for investigation, and provide for an official supervision of issues of stock and bonds. The new court is needed for the prompt adjudication of controversies arising under the law, and the President regards the establishment of it as something greatly to be desired. A portion of the section relating to mergers should have been retained. We refer to the part which forbids the acquisition of a competing line. While it is true that such combination is unlawful under the Sherman act, it would be well to have an explicit prohibition in the railroad statutes. As to the remainder, there is room for argument. Members who faithfully represent their constituents' hostile attitude toward Trust combinations feared that this part of the bill might impair the force of the Sherman act. The Republican platform favors the making of traffic agreements, subject to the Commission's approval or rejection. Mr. Roosevelt and Mr. Taft have repeatedly advised that authority for making them, under such restrictions, be granted. It seems to us that the section relating to such agreements ought not to have been dropped. As we recall it, however, while it provided that the agreements should be filed with the Commission, it did not say that the Commission's approval should be essential. As to this point, an amendment was needed; but permission, thus guarded, should be given. The Commission already has authority to make a physical valuation; unless the new and more explicit grant of power is accompanied by a large appropriation, the work will not be done. In this part of the bill, as in some other sections, Congress is inclined to give the Commission much more than it can do.

New legislation concerning long and short haul charges was sought by those who feel that the railroads, in charging more for a certain distance than for a greater one, have discriminated against some communities and in favor of others, and have suppressed competition by water in some cases. The demand for strict prohibition was made mainly in the interest of what are called intermountain cities, that complained of such discrimination by the transcontinental roads in favor of the Pacific Coast. The adoption in the Senate of a modification of the House's long and short haul amendment was preceded by interesting legislative negotiations. All factions profess to be satisfied. In support of the compromise proposition the most active insurgents joined hands with the regulars of the "old guard." We think the accepted section, while not perfect in form, is better than the amendment attached in the House, and that the substance of it should be in the final bill. While it forbids a railroad to charge more for a short haul than for a longer one, it makes an exception whenever a company convinces the Commission that a heavier charge for a certain distance than for a greater one is just and reasonable. This would be a marked improvement upon the present law. The railroad, and not the shipper or a complaining community, would be required to appeal to the Commission and to prove that circumstances and conditions fairly called for what on the face of it seems to be unreasonable and unjust.

It is evident that important sections of the bill will be shaped in conference. We are confident that the final measure, altho it may not satisfy either the conservative element in Congress or the radicals there, will have provisions of much value and will distinctly promote just and effective regulation of railway finances and traffic.

Chantecler Hats

M. ROSTAND has been sharply criticised for decking the heroine of his avian drama, the hen-pheasant, with the golden plumage which in nature is confined to the male fowl. The London *Times*, for example, devotes a long editorial to the discussion of the alleged blunder; as usual coming to an end without coming to a conclusion, but on the whole inclined to doubt whether such license is permissible under the rules laid down in Aristotle's "Poetics." Other critical periodicals have in shorter and uglier words called M. Rostand a "nature-faker." Considered literally this charge cannot be denied, but M. Rostand's justification is to be found in the fact that the women were the first nature-fakers in this respect and that he is really portraying feminine, not pheasant, characteristics. Such nature-faking is not confined to this barnyard play, for women everywhere adorn themselves with borrowed plumes and—significant fact—they always have to borrow them from the opposite sex in the ornithological kingdom.

Hence the chantecler hat is a direct violation of the laws of nature, according to the new dominant school of zoölogical sociologists, who teach us to look beneath and behind for our models. The jungle-folk have become our schoolmasters and the bestiary is again in use as a textbook in ethics. The imperialist holds up the standard of the lion or the eagle. The socialist, after the manner of an ancient malefactor of great wealth, bids us emulate the ants and the bees. But where among birds, beasts, insects or reptiles can the women find justification for their present monopoly of bright colors and fanciful attire?

It is, in fact, a comparatively recent usurpation of masculine rights; rights which might be assumed to have been established by undisturbed possession thruout untold generations of human and animal life back to the primordial protoplasm whose constitution settled all things for us. In savagery the women did all the hard work and the men wore all the fine clothes. It was the Indian chief who decorated his head with the rooster's feathers. Imagine a squaw in a chantecler hat, or even in a Merry Widow! But in civilized countries this state of things has been reversed. Man has been robbing woman of her work; stealing the household crafts from her one by one and taking them to the factory, leaving to her sometimes merely the simulacrum of industry. So woman has gradually risen into the position of a leisure class; not an idle class, but having time to devote to the esthetic side of life, to cultivate art, music and literature, until in the matter of culture she is getting far above her prosaic and industrious consort .

Strange to say the women do not seem to feel aggrieved at finding their occupations gone. They do not parade the streets with banners demanding the "right to work." This confirms the suspicion that women may, after all, be regarded as essentially human beings.

On the other hand the men do not offer any apparent objection to the disposition of the women to monopolize the beautiful. They are quite willing that the women should go to all of the art galleries, hear all the good music, read all the poetry and wear all the fine clothes. Each sex has in fact endowed the other with the virtues it believes in but does not want to be bothered with. Men admire unselfishness, chastity and humility, but these being inconvenient virtues, are best practised by proxy, so they are turned over to the women. Women realize that courage, industry and enterprise are necessary to make the world go round but they prefer to leave them to the men. Women do not object to bald heads. Men do. But as a man never sees the top of his own head he goes bald without any compunction of conscience, while the women have much hair, often, indeed, more than they are legally entitled to. Men like dainty fabrics and gay colors, have, in fact, extravagant tastes in the matter of dress. But it is too much trouble to wear them, so they give them over to the fair sex, which needs such adornment less but is more patient about it. So we may in fairness regard the chantecler hat and all its symbolizes as a masculine affair, designed by men, paid for by men and admired by men, but worn by women because a man can see it better when it is

not on his own head and he also evades the annoyance of wearing it. A man with his wife in the Easter parade reminds one of the hero marching in triumph thru the streets of Rome; his sword, his shield and his helmet not worn by himself but borne by the faithful armor-bearer walking by his side.

Neutrality for the Panama Canal

Why should not the Panama Canal be neutralized by the agreement of all the great Powers, even more absolutely than the Suez Canal is now neutralized? Is it necessary, as is proposed or expected, that the United States should spend twenty or thirty million dollars to protect the canal's two terminals, and should keep ten thousand soldiers constantly there in camp doing nothing, and maintain half a dozen Dreadnoughts in the neighborhood? Is there not a better way? In 1888 Great Britain, Germany, France, Austria, Spain, Italy, Holland, Russia and Turkey, entered into an agreement that the Suez Canal should be open to free use of the nations, in war equally as in peace, and should never be blockaded. Even ships of war can use it in time of war, but no act of belligerency shall be committed in the canal nor within three maritime miles of its mouths. The acts of these nations are sufficient to protect the canal against any act of hostility by any other nation. The canal is thus neutralized and no defenses are needed. For the Panama Canal we have no such adequate protection in time of war, as only the United States and Great Britain are pledged to neutrality. The Hay-Pauncefote Treaty of 1901 follows generally the lines of the treaty protecting the Suez Canal, making it equally free and open to vessels of commerce or war of all nations on the same terms, and providing that it shall never be blockaded, nor any act of hostility be committed within it. But the treaty does not say definitely, as does the Suez Canal treaty, that it "shall always be free and open, *in time of war* as in time of peace, to every vessel of commerce or of war, without distinction of flag." It provides that belligerents may pass thru, but, for all the treaty says, the United States, owning the canal, could close it if the United States should be at war. Further, only Great Britain and the United States are bound to respect its neutrality; while this is not binding on Germany, France, Russia, Japan or any other great Power with which we might be at war. Any one of these Powers might blockade the canal at its pleasure. By all means it ought to be absolutely neutralized, protected by all the great Powers by a special treaty or by an addition to the law of nations, to be agreed upon at the next Hague Conference. The extension of the policy of neutralization, which already covers more lands, seas and rivers than many know, is one effective way to limit the ravages of war.

A Navy as Preventive of War

In an editorial of a few weeks ago we asked when a great navy has ever prevented war. Mr. Henry H. Ward, secretary of the Navy League, writes us at length, but we can give the evidence he presents briefly. He says, generally, that Britain's big navy has been a protection against attack, and particularly that it was England's naval defense that prevented an invasion by Napoleon. It was our navy in the Civil War, he declares, that prevented foreign intervention. Again, he believes that but for our strong navy defending the Monroe Doctrine, Germany would have made war with Venezuela in 1902, and taken possession of South American territory. China, he says, suffered humiliating defeat by Japan because she had neither army nor navy. The War of 1812, he says, would not have happened but for the fact that we had no navy; and equally, he asserts, there would have been no war with Spain if Spain had not supposed our navy to be weak. His argument is that the fact that a war was made on a nation that had, or was supposed to have, a weak navy, is proof that a strong navy prevents war. He concludes with the analogy that as a strong police prevents violence, so a strong navy is a protection to a nation against aggression. We are quite willing to allow that a limited military or naval force may be needed to do police work, even under universal

arbitration; and we are willing to allow that in case of there arising a despot with the ambition of a Napoleon or Tamerlane, he might be deterred from invading another country if he knew he could not conquer it; but in these days diplomacy or arbitration can always avert war, navy or no navy; and we recall that our Lord, in a parable, reported a case in which the weakness of his army prevented war, and compelled a king with only ten thousand soldiers to make conditions of peace with one who was ready to come against him with twenty thousand. If a strong navy may have sometimes been the chief preventive of war, it is quite as likely to be its provocation.

Unjust Discrimination

During the last week there was held in this city a convention to consider the condition of the negro in this country, particularly as concerns disfranchisement. Apart from one address by an irresponsible white man, who preached violence and anarchy and disgusted everybody, the addresses were calm but emphatic in exposing conditions. We were particularly struck by the statistics given by Professor DuBois. He showed that the negroes are shamefully discriminated against in the public schools of the South. The whites always administer; he cannot find one colored superintendent or trustee in charge of negro schools. Negro education is in disfavor generally, with exceptions. In South Carolina the per capita expenditure for white schools was $10.34, and for negro schools $1.70. In Georgia the State is establishing an agricultural school in every Congressional district, and has expended $508,000, all of which goes to white schools, altho the negroes pay taxes. It is expected that the negroes, if they want schoolhouses and improved schools, must themselves raise the money. Ex-Governor Hoke Smith made speeches all over Georgia advocating the overthrow of the negro school. In one speech he said:

"You must stop negro education. To do so you should put into the negro schools negro teachers who are not able to do the work. If you do so you will put a check to negro education. Do not offer inducements to highly trained negro teachers."

In all Georgia there is not a single high school for negroes. A multitude of similar facts show the utter injustice that so generally prevails. And, further, it explains why it is necessary for Northern benevolence to provide so largely the higher education for negroes in the South. This ought not to be required now, nearly fifty years since the Civil War.

Resolutions of the Missionary Congress

It was in Chicago that the long series of conventions of the Laymen's Missionary Movement culminated in the Men's National Missionary Congress. The meetings were most inspiring, and it was time that the men should take hold of the work of world missions with something of the unity which characterizes the earnestness of the women's organizations. It was noticed by those who were at the Missionary Congress that attention was given solely to foreign missions, and that no sort of attention was given to the need of mission work at home. To one other point we may properly call attention. The pre-millenarian idea seemed to underlie a good part of the addresses and even the resolutions finally adopted. What we want is to create the kingdom of God in the world, which includes all Christian education and culture. But this was not properly emphasized; and instead the speeches and resolutions pressed the possibility and duty of preaching the Gospel to all the world during this generation. It is our impression that God values quality quite as much as numbers, and that one developed saint may be worth as much as dozens of hearers who are only superficially converted. There are very earnest people who interpret Scripture so literally and peculiarly that they would hurry up the bare preaching of the Gospel to all the world, so that then Christ may come down to earth again and usher in the millennium: but there is a better and more generous principle of missions. Send missionaries to all the unevangelized hundreds of millions—yes, but we would not reduce the emphasis to be put on the upbuilding of character and the

regeneration of society. St. Paul was a great missionary, but his letters show that he urged Christian character far more than the duty of gaining converts. This is the first of the resolutions adopted, with our italics:

"This first National Missionary Congress in the United States, representing more than 20,000,000 Church members, recognizes the *immediate* world-wide *presentation* of the gospel message to be the *central* and commanding obligation resting upon all Christian Churches, and declares its conviction that the Church *of our generation* can and should obey literally the great commission of our Lord to present the gospel to every creature."

We do not wholly like the form of this resolution. The mere "presentation" of the Gospel message is usually futile. It takes generally a full generation before the hearers will listen and understand and fairly begin to accept it.

This week the earth passes thru the tail of Halley's comet, if the tail is long enough; but without fear of disaster we send out this issue of THE INDEPENDENT, having no apprehension that it will not reach its subscribers. We thought that a correspondent had beaten all the astronomical records of the comet by telling us that the angel's sword which David saw in the heavens after he had numbered the people was this comet, but Sir Robert Ball tells us that it appeared at the date of Methuselah's death, altho the evidence is not clear. It is generally held that the comets are cosmic wanderers that have been caught by the planets, and that this comet is one of Neptune's retinue. But Professor Lowell will not have it that any comets are captives, and he believes that they all belonged from their beginning to our solar system.

The sporting editor of the New York *Sun* gives in *Harper's Weekly* an estimate of the money that will be worse than wasted in the big fight to come off on July 4 a few miles out of San Francisco. If the white brute wins he will receive about $667,750, while if the black brute wins his profit will be $360,750, the difference being because in that case the moving pictures will not be popular in the South, and he has not contracted for a vaudeville show. The defeated brute will have his share in the profits, at least $158,000, which may amount to $358,000. But this is but a small part of the waste, for the expense of travel of 10,000 visitors from all over the world, with the reporting, the pictures and the betting, will run into millions. If that is the way of American extravagance it is no wonder prices soar.

At the opening of the last century a pastor in Portsmouth, N. H., preached a sermon in which, among the discoveries and inventions of the preceding century, he dwelt upon the construction of an orrery by a Princeton professor to illustrate the movement of the planets. So small a thing was great in those days. Dr. R. S. MacArthur, who celebrated last Sunday the fortieth anniversary of his settlement over the Calvary Baptist Church in this city, seemed in his sermon to recount the creation of a new civilization as he enumerated some of the steps in human progress made during his short period of service. He has made his own church one of the strongest in the country, and his influence has been for progress and a large Christianity.

The blind House Chaplain has made himself conspicuous by praying that muckrakers might rake against their own door, and stop their cant and hypocrisy. This makes one wish that the chaplaincy were abolished, or that the chaplains were given a prayer book. At any rate give us a chaplain who has sense, one like Chaplain Edward Everett Hale.

We are having sharp lessons of late as to the duty of obeying the laws against smuggling. Even good men and women have seemed to think that to cheat the Government is no crime. It is a test of perfect honesty that one does not defraud the country he loves in customs or in taxes, nor a railroad in fares.

Woman's suffrage is making steady progress. Last week in Norway municipal suffrage was given to all women over twenty-five years old. Hitherto suffrage was limited to women who paid a considerable personal income tax.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MAY 26, 1910 No. 3208

Survey of the World

End of the Ballinger Investigation

The Ballinger investigation came to an end on the 20th, so far as the taking of testimony is concerned, and arguments will be made by counsel on the 27th and 28th. It is predicted that the votes of seven of the members of the committee will be favorable to Secretary Ballinger. The latter, on the 16th, discharged Frederick M. Kerby, the stenographer whose published statement had shown the part taken by Oscar Lawler, the law officer of the Interior Department, in the preparation of the case against Glavis for the President. In the letter of dismissal Mr. Ballinger said:

"In divulging information obtained by you in the confidential relation of stenographer to the Secretary of the Interior; in communicating that information to those whom you are bound to know are wrongfully seeking to bring reproach upon the Administration, and to injure me; and in deliberately misstating material facts, which you did treacherously comunicate, you show that you are unworthy and unsafe. The fact that your treachery is futile cannot mitigate the character of your offense. For the good of the service you are hereby dismissed."

Kerby remarked that he had expected to lose his place. He was willing to leave his conduct to the judgment of the people, and he did not think Mr. Ballinger was a competent judge of ethics. On the following day he was a witness before the committee, telling how he came to publish his statement. He had desired to avoid giving testimony, but after Secretary Ballinger had said he had no specific knowledge of Lawler's work he decided that it was his duty to speak. The truth was that the Secretary had full knowledge of the Lawler memorandum. Interesting letters were placed in evidence before the committee. It is alleged that the Secretary intended to procure for R. M. Thompson, city engineer of Seattle, the place now held by Director Newell, of the Reclamation Service. In May, 1909, he wrote to Mr. Thompson, saying he had been the guest, on the preceding Sunday, at Yonkers, of George M. Perkins, "the head of the house of J. Pierpont Morgan & Co.," who was to take a party to Alaska for an investigation as to "the feasibility of exploiting Alaska in railroad construction and in other lines in which he is deeply interested." Mr. Perkins wanted an engineer to go with him and had asked the Secretary to recommend one. He had recommended Mr. Thompson, but had not abandoned the hope of securing his services later in the other matter. Mr. Thompson replied that he would go. A few days later he was advised by Ballinger to decline the invitation, and Ballinger wrote to Mr. Perkins that he wanted Thompson to remain in the country for the consideration of "certain business matters." But he asked Thompson to recommend an engineer to go with Mr. Perkins and advise him concerning "feasible railway construction and mineral resources." Mr. Perkins invited the Secretary's son to go as a guest, but the Secretary declined this invitation. Questions asked by Glavis's counsel indicated a desire to emphasize the Secretary's friendly relations with persons prominent in the Morgan-Guggenheim syndicate, which had an option on the Cunningham coal claims. Mr. Lawler was an angry witness. His statement in reply to the Glavis charges, he said, had been prepared without consultation with anybody, altho the Secretary had examined it after it was finished. He had destroyed the rough drafts or copies because there were men gum-shoeing

around him. One of these was Brandeis (Glavis's counsel); another was "Hapgood, of *Collier's Weekly*"; another was J. B. Connolly, a writer for the *Weekly*, a man who, he asserted, had trampled on women and children in a fight for the lifeboats on a sinking steamship. But Brandeis (whom he directly addressed) was "the flower of the foul flock" that had "stopped at nothing in a despicable and cowardly attempt to assassinate character." He also asserted that James R Garfield, Gifford Pinchot and Brandeis had "corrupted" Kerby and other witnesses to procure false testimony. This brought hisses from the audience, from critics whom the witness angrily called "snakes or geese." During his cross-examination by Mr. Brandeis he occasionally remarked that the latter was a liar. On the following day he admitted that he had had a prejudice against Glavis. When he (Lawler) was District Attorney at Los Angeles, Glavis had reported, as a land agent, that he was not the right man to prosecute certain persons accused in connection with land frauds. Land Commissioner Dennett testified that two special agents of the Land Office had been detailed to do detective work in obtaining personal information concerning certain writers of magazine articles in which Secretary Ballinger was severely criticised. This, he thought, was not an improper use of the agents, for the Interior Department had been attacked and must defend itself.

War in South America Prevented

Peru and Ecuador have accepted the offer of the United States, Brazil and Argentina for joint mediation to settle the dispute on account of which the two countries were about to fight. The negotiations were begun by our Government on the 12th, and Brazil and Argentina promptly consented to assist. The note addressed to Peru and Ecuador says:

"Actuated by a sincere desire that peace be not broken between any two of the sister American republics, whose mutual regard, common institutions and inseparable interests should be sufficient guarantee of a conciliatory spirit, and believing also that the moment has arrived for recourse by the Governments of Ecuador and Peru to the mediation of friendly and disinterested governments, strangers to the dispute, under the obligation of Article II, title 2, of the Hague Convention of 1899 for the pacific settlement of international disputes, to which both governments duly adhered, and which they solemnly reaffirmed as signatories to the Hague Convention of 1907; and believing also that under Articles II and III of the same conventions it is opportune that friendly governments should offer their good offices to avert war, the Presidents of the Argentine Republic, of Brazil and of the United States of America ask earnest consideration of the following views by the governments concerned:

"It is unthinkable that Ecuador and Peru should go to war over a boundary dispute which both by solemn agreement submitted to arbitration. Neither would it be conscionable to sanction the repudiation of the award in advance by either party, for such sanction would dishonor the enlightened institution of arbitration to which institution of an advanced civilization the American republics are committed.

"If the Governments of Ecuador and Peru will withdraw their forces from the frontier, suspend mobilization and other measures of preparation for war and await eventualities, then in case no award is made, or in case serious difficulties shall subsequently arise, the three governments will undertake a satisfactory solution by mediation."

The troops are to be withdrawn at once from the frontier. Announcement of the decision in the boundary controversy will be withheld for some time by King Alfonso.

Wages and Railroad Rates

The arbitrators chosen to adjust the wages of the employees of the New York Central Railroad Company have finished their work. They decided last week what the increase should be on the Central system's lines west of Buffalo, and it averages about 9 per cent. Wages there were already higher than those paid east of that city. The aim of the arbitrators has been to provide for a general acceptance in the East of the rates determined in the case of the Baltimore & Ohio Company, and thus to standardize railway wages thruout the country. It is estimated that about 55,000 miles of road are affected by the changes recently made. The Erie Company's men voted to strike, but such a contest was averted last week by the company, which agreed to make increases substantially in accord with the Baltimore & Ohio rates. Among other changes reported are an increase of about 20 per cent. on the Central New England road, an addition of 12½ per

cent. for the New Jersey Central's engineers, and 6 per cent. for the New Haven Company's telegraphers and towermen. The demands of the men on the New Haven Company's trolley lines will be submitted to arbitration.——Because of the higher cost of living the Standard Oil Company has decided to increase the pay of its employees by from 6 to 10 per cent. It is estimated that this change will add from $6,000,000 to $10,000,000 to the company's annual payroll. The bituminous coal miners in Iowa have resumed work at increased rates, and the mine owners have added something to the price of coal. In Illinois, however, 72,000 miners have gone on strike, after being idle for six weeks. The strike of the employees of the International Paper Company, which began three months ago, ends in a victory for the men, whose pay is increased by 6 per cent.——Shippers in the Middle West are organizing to oppose the projected increase of railroad freight rates by which the companies seek compensation for the additional wages. A conference held in Chicago was attended by 400 prominent manufacturers and representatives of commercial organizations. A committee was appointed and it has asked the railroad companies to refer the proposed increase of freight charges to arbitration by the Interstate Commerce Commission. It is understood that if arbitration is not accepted the shippers will attempt by injunction to prevent an increase. Following the example of the New Haven road all the other roads having terminals in New York City are increasing their commutation passenger rates, and it is estimated that the proposed additions will increase by nearly $5,000,000 the sum paid annually by commuters. Protests have been made by committees representing them, and appeals have been addressed to the Public Service Commission of the State.

Cases of Bribery and Fraud

Three men recently indicted for bribery in Pittsburg were tried last week. Dr. F. C. Blessing, President of the Common Council, was convicted, but the jury asked the Court to be lenient. In the case of Charles C. Schad, formerly a Councilman, the jury disagreed and was discharged. Frank F. Nikola, a wealthy business man, accused of having assisted in bribing Councilmen in the interest of the Columbia National Bank, was acquitted. Joseph G. Armstrong, Director of Public Works, was arrested. The Voters' Civic League says he is guilty of forgery, perjury and subornation of perjury in connection with the falsification of payrolls.——In Schenectady, N. Y., where there is a special term of court, by order of Governor Hughes, to consider charges affecting the county's Board of Supervisors, George F. Sauter, a contractor, has been indicted for defrauding the county. Other indictments are expected.——An inquiry concerning the New York City Borough of Queens (on Long Island) has led to the indictment of ex-Sheriff M. J. Goldner, for larceny and forgery; ex-Superintendent of Sewers C. J. Burke, for forgery, and Robert Kreuscher, a saloonkeeper, for collecting fraudulent claims. Goldner is a man of large fortune and a local Democratic leader. Mayor Gaynor asks the District Attorney to procure the indictment of John M. Cragen, formerly secretary of Borough President Gresser and now a judge of the Municipal Court, upon evidence tending to show that whenever he bought $5 worth of postage stamps for the borough offices he collected $50, having falsified the vouchers.

The Islands

An explosion of 6,000 pounds of dynamite, on the 18th, killed thirty-three persons, injured 145, and destroyed the building occupied by the Cuban Rural Guard in the city of Pinar del Rio, 108 miles from Havana. At first some thought that the explosion had been caused by conspirators, but it was due to an accident. Owing to race disturbances the dynamite supplied for use in making roads had been stored (for safety) in the Guards' building, and the explosion took place while workmen were placing the cases or boxes in wagons, the authorities having decided to remove the dynamite to Havana. The lid of one of the boxes was broken, and a carpenter carelessly nailed it down with a hammer. His head

was found nearly half a mile away. Among those killed were several officers of the Guard and their families.——Señor Velez, formerly Cuban Secretary of State, has been pacified. Having been appointed Minister to Spain, he resigned because his expenditures in the State Department were criticised by his successor, Secretary Sanguily. The latter explained that he had not intended to accuse Señor Velez of extravagance.——In Congress, at Washington, last week, Señor Quezon, Delegate from the Philippines, in a speech exprest the desire of the Filipinos for independence. He has since received cable messages of congratulation from prominent Filipinos. Señor Osmena, speaker of the Assembly, sent word that the desire of the people for independence "remained unalterable." The Nationalist party, of which the two men are representatives, includes a large majority of the Filipino voters and elects three-fourths of the members of the Assembly.——Reports covering the first eight months of the new tariff, which permits free trade between the Philippines and the States in nearly all products, shows that in this period the imports from the islands increased from $6,500,000 to $12,250,000, and the exports to the islands from $7,000,000 to $11,500,000. The gain in imports was mainly in hemp (about $3,000,000), sugar ($1,200,000), and cigars ($950,000); and the chief addition to the exports were $1,600,000 in cotton goods, $800,000 in manufactures of iron or steel, and $700,000 in wheat flour.——A Spaniard named Perello, who recently arrived in Madrid, says he is one of 258 sailors who swam ashore from a Spanish warship at the time of Admiral Dewey's attack in Manila Bay; that they were captured and held in bondage on an island by Tagalogs; that 27 escaped in January last; that 28 were drowned while trying to escape, and that many remain in captivity.——The Court of Claims, at Washington, has decided against the claim of Liliuokalani, formerly Queen of Hawaii, for $450,000 rent for Crown lands in the islands.

Central America

The steamship "Venus," which sailed from New Orleans in the guise of a merchantman, was speedily transformed into a warship. Having taken on board 300 followers of Madriz, she appeared at Bluefields and demanded the surrender of that port by Estrada's revolutionists, the penalty for resist-

THE TEMPLE OF PEACE.

Erected by Andrew Carnegie at Cartago, Costa Rica, for the Central American Court of Justice and destroyed by the earthquake of May 4.

ance to be bombardment. Her commander also intercepted a merchant vessel and took from her a bag of mail which had been sent from New Orleans. At this point Commander Gilmer, of the United States gunboat "Paducah," intervened, forbidding bombardment, ordering the "Venus" to depart, and warning her commander that he must not molest merchant vessels seeking the port. He also landed 160 sailors, with guns, to protect the lives and property of Americans, and gave notice to Estrada and Madriz that there must be no fighting in the city. The two armies were confronting each other a few miles away. Our State Department explains that the "Venus," having deceived the authorities at New Orleans, has forfeited full belligerent rights and was not entitled to conduct a blockade which should be recognized. It was reported on the 21st that the "Venus" had attacked and sunk the revolutionist gunboat "Omotepe."——Additional earthquake shocks in Costa Rica were reported on the 20th. Passengers arriving at New York from Port Limon tell dreadful stories of the suffering and devastation in Cartago. Only four houses were left standing there.

THE LORD MAYOR OF LONDON READING THE PROCLAMATION OF GEORGE V AT TEMPLE BAR.

The Funeral of Edward VII

The decision of King George to permit the body of his father to lie in state was highly appreciated by the people, who in unprecedented numbers availed themselves of the privilege of doing honor to the deceased monarch. Thousands of people were turned away from Westminster Hall every night when the doors were closed, and many maintained their places in the queue until the opening in the morning. The body of Edward VII was conveyed from Buckingham Palace to Westminster at noon, May 17, while "Big Ben" tolled and a combined military band of over four hundred pieces played the "Dead March" from "Saul." The coffin was placed upon an ordinary gun-carriage, drawn by eight fine black horses. Upon the white satin pall were placed the symbols of royalty, the orb, scepter and crown. Behind the carriage walked King George, in admiral's uniform, followed by his two sons, Prince Albert and the Duke of Cornwall, in the uniform of naval cadets. Following these came the visiting royalty and members of the King's household, and then state carriages for the ladies, and a mounted Guard. At the entrance to Westminster Abbey the funeral cortege was met by the Archbishop of Canterbury and the Dean of Westminster, and as the coffin was carried up the hall it was followed by Queen Alexandra, supported on either side by King George and the Dowager-Empress Marie of Russia. After the reading of the lesson from John v and the singing of Psalm

xxiii, the Archbishop of Canterbury delivered a short discourse. The House of Commons and the House of Lords were assembled on opposite sides of the hall, and the entire Cabinet was present. On May 20, a longer and more imposing procession followed the body of the late King from Westminster to Paddington Station, where it was conveyed to Windsor by train. Nearest to the King behind the gun carriages rode the Duke of Connaught and Kaiser Wilhelm, then followed King Haakon of Norway, King George of Greece, King Alfonso of Spain, King Ferdinand of Bulgaria, King Frederick of Denmark, King Manuel of Portugal and King Albert of Belgium. Following the horseback riders were six carriages, the first occupied by the Queen-Mother Alexandra, the Russian Dowager-Empress Marie, the Princess Royal and the Princess Victoria, and the second containing Queen Mary of England, Queen Maud of Norway, the Duke of Cornwall and Princess Mary. The next four carriages were occupied by the ladies of the Court and the seventh by Prince Tsai Tao of China and his suite. In the eighth carriage were M. Pichon, the French Foreign Minister; Sanad Khan Montaz es Sultaneh of Persia, and Theodore Roosevelt, Special Ambassador from the United States, the last wearing evening dress, making a marked contrast with the brilliant uniforms of the other representatives. Queen Mary has allowed the Queen-Mother Alexandra to take precedence of her on all occasions and has deferred to her wishes in all respects in regard to the arrangements of the funeral. The streets thru which the funeral procession passed were packed with people who bowed their heads and maintained perfect silence as the mourners passed. The admirable decorum and orderliness of the crowds during the week have attracted the general commendation of visitors. London has been the refuge of political malcontents from all countries, and there were nine kings taking part in the ceremonies, some of whom have been the object of anarchistic attacks in their own lands, yet there were no disorders or unpleasant incidents of any kind.

A Channel Flight

A Frenchman has again passed "the silver streak" which separates England from the mainland. The successful aviator is Count Jacques De Lesseps, a grandson of the late Ferdinand De Lesseps, who constructed the Suez Canal and attempted to carry out the Panama project. M. De Lesseps left Calais at 3:30 in the afternoon and arrived at Dover at 4, therefore slightly beating the time made by Louis Blériot on July 25, 1909. He flew high because the Channel was covered with a fog. His compass was useless on account of the vibration of the machine, and, as he could see nothing beneath him, he steered by the sun. A torpedo boat provided by the French Government was to accompany him, but was left far behind. As he approached England he caught sight of Dover Castle thru the fog, and, selecting a landing place a mile inland, shut off his power and glided gently to the ground, landing at Winston Court Farm. He intended to return immediately, but on account of the unpleasant weather postponed it. The machine used was a 50 horse power Blériot monoplane, called by its owner "The Scarabée."

Jewish Persecutions in Russia

In recent years, on account of the embarrassments of the Government; the laws requiring all Jews except certain specified persons to reside in the eastern provinces of Russia have not been strictly enforced. Now, however, the Government, evidently feeling itself strong enough to brave the opposition of the Jews and of the liberal parties in Russia, is expelling the Jews from the cities in which they have been permitted to live and do business. The expulsion is being carried out with great severity and injustice. In Kiev only 170 families are allowed to remain out of 1,150. All are required to leave the city before June 14 and many of them were given only twenty-four hours' notice before they must depart. In some cases they have been prevented by the police from even entering their own houses in order to obtain such property as they could carry away with them. Police raids have gathered into the stations hundreds of

Jews and dispatched them in batches to the Pale, regardless of their wealth or standing in the community. Merchants of the first Guild who are allowed by law to live outside the Pale have been expelled from Kiev in case any excuse could be found for this action, such as are engaging in other business than that designated by the law. The infant children of commercial travelers have been sent away from the city on the ground that their fathers, being absent, have lost the right of residence. In St. Petersburg a modification of the order has been made, which permits Jewish women attending the higher educational institutions to reside outside the Pale like the male university students.

The Chang-Sha Riots

The trouble at Chang-sha is by no means over. Lieutenant-Commander R. O. Bitler, in command of the gunboat "Helena," now at Hankow, reports that all foreigners have been officially notified again to seek refuge on the ships. It appears that the rioting which destroyed the mission buildings was not a mere local disorder caused by the high prices of food, but indicated an organized and widespread revolutionary movement. The consulate at Nanking regards the situation there as exceedingly dangerous on account of the growth of the anti-foreign prejudice, reminding one of the Boxer times. The first day of the riots at Chang-sha appears to have been a spontaneous outbreak, but the destruction carried on in the two following days was of a more systematic character and evidently planned and directed. The houses that were destroyed were those purchased by foreigners. The buildings that were merely rented or were occupied by foreign companies in which the local gentry were interested were not injured. Evidently the people of Hu-nan province are determined to prevent foreigners from acquiring land, and it is regarded as an unpatriotic act to rent it. Last month two Chinese who were trying to negotiate for the sale of some land far outside the city itself to the Standard Oil Company were beaten to death by a mob. Hu-nan has about the same area as Great Britain and a population of 22,000,000, producing large quantities of coal, iron, timber, tea, oil, tobacco and rice. The city of Chang-sha is noted for its patriotism and valor. It held out successfully against the Taipings for eighty days and thus checked the rebellion. It is not expected, under the circumstances, that anything can be done toward the punishment of the real leaders of the anti-foreign outbreak. To make a show of vigilance, however, the Government has seized two men, a barber and a boatman, who were put to torture, found guilty and executed.

Foreign Notes

The first Premier of United South Africa is to be Gen. Louis Botha, now Premier of the Transvaal, who has been summoned to form a Cabinet for the new government. Viscount Gladstone is to be the first Governor-General, and it was expected that Prince George would open the first parliament in person, as he did that of Australia, but since he has become King this will doubtless be impossible.——The recent Spanish elections, in which for the first time all parties had ostensibly a free field, resulted in an increase in the radical element. The Liberals, who had 68 seats in the old Cortes, will have 226 in the new, and the Conservatives have dropped from 237 to 108. The Republicans will have 39 seats instead of 28, and the Socialists, hitherto unrepresented, have elected as deputy from Madrid, Don Pablo Iglesias, the founder of the Socialist party in Spain. The Carlists of Catalonia have lost five seats, leaving them but eight. The Government under Señor Canalejas will have a majority in the new Cortes, but it is an unstable one. In the elections for the Senate the Liberals obtained 87 seats and the Conservatives 37, but the Senate will inevitably be Conservative, because 41 have *ex-officio* positions as grandees of Spain, as captains general and as bishops, and 121 are life appointees.——The returns from the elections in Belgium on May 22 indicate that the Clerical Ministry will still remain in power, altho its narrow majority of eight may be reduced. The Clericals have had control of the government for the last twenty-six years, but in this election the Liberals and Socialists combined to overthrow them.

The Employer and the Labor Union

BY MARCUS M. MARKS

[Probably no man in New York City has done more work in settling industrial disputes than Mr. Marks. Tho actively interested in all good public movements, whether political, social or ethical, he gives most of his attention to the National Civic Federation, of whose Executive Committee he is a member, and to the Roosevelt Industrial Peace Foundation.—EDITOR.]

IN view of existing conditions in the industrial world every effort should be made to throw light on the important question of union relations for the purpose of arriving at a better understanding between capital and labor.

The union has many men who devote all their time to the single purpose of organization, and these men become experienced, well trained and present their case intelligently and forcefully; on the other hand, the employers do not discuss their attitude to organized labor with sufficient freedom or frequency to enlighten the popular mind.

The Closed-Shop Issue.—Those who are experienced in mediation and conciliation in industrial disputes approach with diffidence those cases in which the demand for the "closed shop" is the cause of the difficulty. Strikes resulting from a demand of this nature are the most obstinate; it is almost impossible to settle them. When wages, hours of labor or other conditions of employment are at issue, it is usually possible, with calmness and skill, to bring about a speedy adjustment, because in these instances there is no basic principle involved. These cases may be discussed as practical business matters with little passion by both employers and employees, and they lend themselves readily to compromise; friendly conference and the study of economic conditions soon establish a fair basis for settlement. But when the closed shop is the issue both sides usually feel that a question of principle is involved, and the fight is apt to be bitter and to the finish.

The unions often undertake the struggle for the closed shop, even when only a very few non-union men stand in the way of complete organization. In one industry five thousand men struck because eight men were employed who would not join the union. New unions, untrained and inexperienced, are the most likely to go to extremes in such a contention. In like manner new associations of employers are the most difficult to reason with.

Classification of Shops in Their Relation to the Unions.—In studying the relations between the employer and the union it is desirable clearly to define the terms open shop and closed shop. The problem before us is not a simple one. There are employers who are friendly to the union, those who are indifferent and those who are unfriendly. Upon the attitude of the employer to the union workingman and vice versa, as well as upon other conditions stated below, will depend the complexion of the shop. The so-called open shop and closed shop are the two main divisions—there are at least seven distinct subdivisions in the classification of shops with respect to union relations.

First.—There is the anti-union shop. Here the employer is emphatically and frankly opposed to the organization of his workingmen; this employer has either suffered from strikes or fears their possibility; he will not knowingly employ a union man and will discharge an employee who is discovered to be a member of the union; he may even go so far as to require each employee, before his engagement, to sign a card to the effect that he is not a member of any union and will not join one while in his employ. This shop is frequently confounded with the open shop. But it is not open; it is closed against union men, just as the shop ordinarily termed closed shop is closed against non-union employees.

Second.—There is the non-union shop, where, without any animus against unions on the part of the employer, there happen to be no union men employed. Such a shop may be situated in a locality where workingmen are not organized.

This shop, while practically non-union, is technically an open shop, there being no discrimination against the union.

Third.—We have the typical open shop, in which union and non-union men work freely side by side, without discrimination. The employer may be indifferent, neutral or friendly; he does not actively recognize the union affiliation of his employees, neither is the union officially in evidence, as there is no active shop chairman representing the union employees.

Fourth.—There is the open shop, in which union and non-union men work side by side with the knowledge and consent both of the employer and of the union; there is either a written agreement or an understanding between this employer and his union workingmen establishing the open-shop arrangement officially; there may be a shop chairman selected by the union, but his authority is limited according to the number of union employees. We have in this class the first stage of union recognition.

Fifth.—There is the union shop, in which all workingmen are members of the union, but without any agreement or official sanction from the employer. The shop organization by its own propaganda keeps up this condition of unionism. The non-recognition of the union by the employer technically differentiates this from the typical closed shop. The employer in this "union shop" may possibly not even be aware of the fact that all his men are members of the union until a strike or other cause reveals this condition. This subdivision represents a temporary condition which soon develops into a closed or an open shop.

Sixth.—There is the closed shop with the open union. In this case the employer has an agreement with the union that only members in good standing may work in his shop, with the stipulation, however, that he retains the open market to secure help and may employ non-union men provided they join the union on beginning work, the union agreeing to accept these men at once as members.

Seventh.—There is the closed shop with the closed union. This is the most complete form of union recognition. Only union men in good standing may be employed. If men lose their good standing in the union they must be discharged. The employer may not go into the open market to seek labor, but must apply to the union.

The union demands the closed shop for the purpose of maintaining the advantages gained as the result of a strike or of peaceful negotiations, which advantages the union fears may be lost unless the complete control of the shop is within its grasp. To this end the union offers to co-operate with the employer by influencing its members to live up to their contracts.

The employer, on the other hand, rarely establishes the closed shop voluntarily. His fear is that he will lose control of his business and place his capital at the risk of irresponsible parties who are not fully posted on general trade conditions. He also objects to the visits of the walking delegates with their occasional arbitrary show of power.

Attitude of the Employer Toward Union Regulations.—All employers, irrespective of their attitude to the union, agree in opposing the policy of some of the unions with respect to the following:

1. Restriction of output and limitation of machinery. When a man does not do his best he wrongs his employers as well as himself; more than this, he is apt to dwarf his latent faculties and cripple his future prospects.

Our American workingman, to keep his supremacy, must bring out the best that is in him and not degenerate into a hum-drum average. The advanced unions generally recognize this principle.

The employer, to keep his product successfully in the market, is compelled by competition to introduce new methods and new machines that bring about economy of manufacture. Broadly speaking, labor-saving machinery does not reduce, but increases, the ultimate demand for labor—the hardship, if any, is but temporary. Whoever opposes the introduction of improved machinery opposes progress.

2. Limitation of Apprentices. All employers disapprove undue limitation of apprentices, and feel that every youth desiring to learn a trade should have the opportunity to do so. The employers have no faith in the policy that restricts the number of apprentices to a small per-

centage for fear of bringing burdens on the trade. They feel that every mechanic is a valuable asset, a producer, a consumer and an important member of society.

3. Uniform wage. The uniform wage is generally disapproved by employers, and many wise union leaders now condemn it. It is apparent that no two men have equal ability, and there should be opportunity for the bright, quick man to forge ahead. Nor should the unfortunate, dull workingman be forced out of employment by a general wage scale which the employer cannot afford to pay this slow worker; for the minimum wage, when established by the union, is usually pushed up to a point which forces the employer to discharge the under-average workingman. The introduction of the uniform wage may thus make the employer a party to working a cruel hardship on the wage-earner.

4. Secondary boycott. The secondary boycott is universally and strongly condemned by employers and by the public. While many excuse those who refrain from patronizing a man whose methods of business are unjust and oppressive (this is called the primary boycott), the punishment of a third party because he refuses to join in such a boycott (which is termed the secondary boycott) is a coercive measure which finds no sufficient apology.

5. The sympathetic strike. When workingmen, particularly those who are under contract with the employers, stop work, not because of any differences of their own, but in sympathy with striking union workingmen, perhaps in an entirely different industry, such action is unanimously condemned by employers and by the public. While the spirit of sacrifice, engendered by a fellow feeling with those in the same general cause of labor, is truly to be admired, its method of expression by the sympathetic striker is in every way evil—it loses the confidence and good will of employers who are made to suffer for the acts of others. It weakens the cause of collective bargaining, and thus undermines the usefulness of the union. The sympathy exprest in the sympathetic strike might more wisely show itself in financial and moral support on the part of the union workers remaining in their places rather than by actual cessation of labor, which leaves more unemployed to be assisted and less wages to be used in such assistance.

Sixth.—Compensation for accidents. Employers agree that the present system of liability insurance is unjust and ineffective. Many favor the new thought of prompt and direct compensation for accidents; but if they are to be responsible for injuries resulting from negligence of employees they will insist on full liberty in the selection and discharge of help, which liberty is not allowed in the closed shop.

Conciliation. — Differences between labor and capital can best be adjusted by round-table conferences, which are educational and conciliatory. The offices of disinterested third parties of experience are often very valuable.

The round table is selected because, figuratively, it is democratic, having no head and no foot, and because there are no sharp corners between you and your neighbor.

The labor question is one which concerns the relations between man and man and should be approached in a fraternal spirit. There should be no patting on the shoulder, no paternalism, no charity. The workingman, as a rule, desires no favors. He feels that he has a right to a light workroom, with proper air and sanitation; to a fair wage, which will permit him not only to live, but to enjoy life.

Every one should approach the labor question carefully and intelligently. No one should ever take sides on impulse, but only after full and fair investigation of all the conditions. Justice should be the aim. There are good unions and bad unions; there are good corporations and firms and bad ones; each should be judged according to its merits. Every effort toward organization for a good purpose should be encouraged and then the association be judged by its acts. Prejudice should be eliminated; judging beforehand, judging without knowledge, is immoral and dangerous. Encouragement of either side in a dispute without full knowledge may bring great hardship even with friendliest intent. The controlling power should be the spirit of justice.

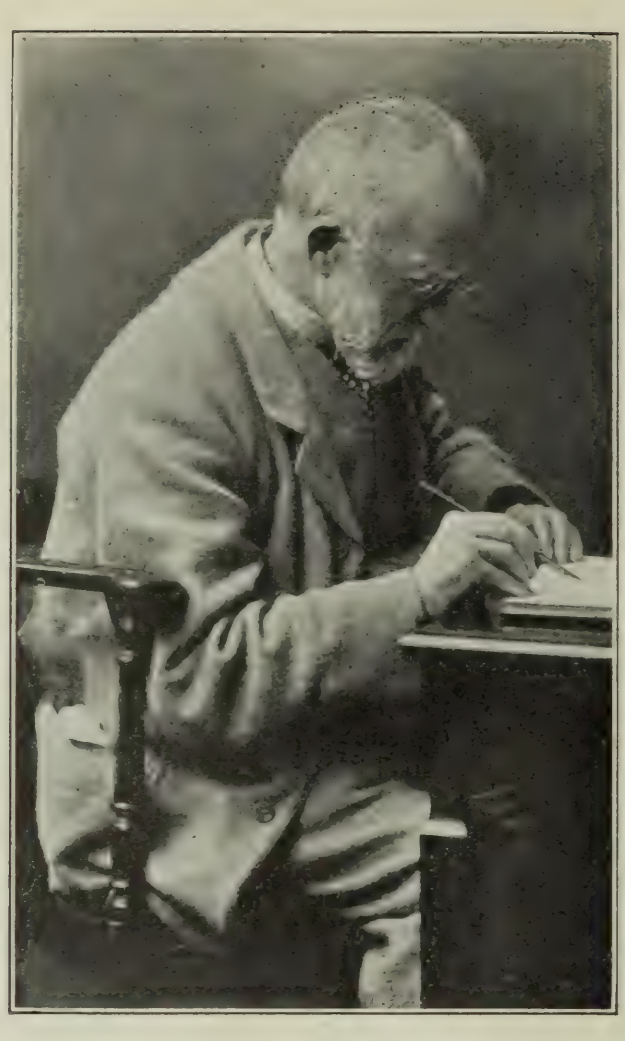
Investigation Board.—How are we to

get the facts to aid us in arriving at a proper judgment in cases of labor difficulties? There is no adequate way at present. It seems to me that the State should establish machinery for the fair investigation of important industrial disputes, particularly in public utilities, either before or immediately after a strike. I have not worked out the details of a plan, but suggest, tentatively, that it might be well, on request of either party, that the State ask the employers to select two men, the employees two and these four to select a fifth and sixth to complete the board of investigation. If either side decline to select its two representatives on the board within a reasonable time, then the State might appoint two chosen from the same industrial class to represent that side. The reason that six men are here suggested, instead of five, is that two impartial judges will reinforce each other and hold a stronger balance than one would. Not being an arbitration, a single deciding vote is not necessary. The report of this board should be promptly made public; then public sentiment will assert itself; the strike will have intelligent support or disapproval and justice will more readily be secured. I would not at this time go as far as the Canadian act does, nor as the Massachusetts act contemplates, to prevent strikes and lockouts; it might be well to omit any compulsory features except those of fair investigation and publicity. A voluntary board, selected in each case from the particular industry involved in the trouble, will be better posted in the special situation than a standing State board, and, furthermore, will be more influential with the public; for it would be possible to get men of the highest standing in the community to serve in single cases, men whose services could not be secured on a permanent State board. Let us hope for the early establishment of such a court of investigation in every State of the Union.

New York City.

Fulfillment

BY ESTELLE BIDDLE CLARK



Forspent, I leant from the high casement, sighing,
"How long Fulfillment hides behind her mask!"
When lo! a wind stirred all the woodlands lying
On the near hills, and sped a low voice, crying,
"Sigh not, but work! Success is not thy task.

"Do *we* fulfill? Nay, our god is Antæus;
Ashes and muck we come to, as dost thou;
Great then as now, splendid as thou dost see us,
Silver and green, alive in bole and bough.

"'Homeless,' thou moanest? Home is where God set thee.
'Failure,' thou whinest? When have strugglers failed?
Thou hast not failed, so long as sin doth fret thee,
Wrong cannot say, if in fair fight he met thee,
'Thy man-of-war a derelict hath sailed.'

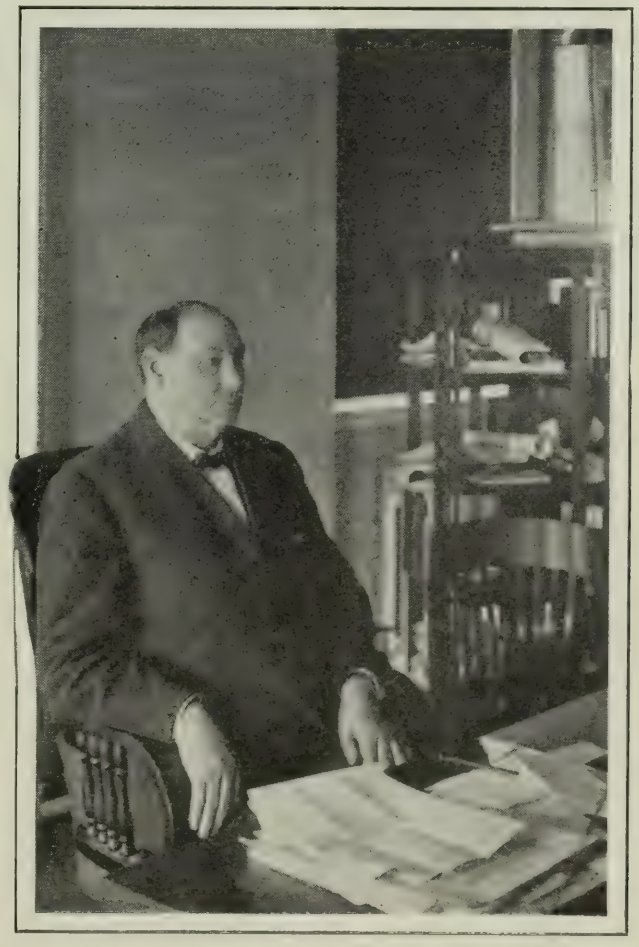
"Down to thy work! Despise successes shining;
Down to thy work, to succor human need!
Down to thy work, thyself with them aligning
Who plan too largely ever to succeed!"

Waynesburg College, Waynesburg, Pa.

Our London Correspondent

JUSTIN MCCARTHY, historian, novelist, Member of Parliament and former chairman of the Irish party, the literary editor of THE INDEPENDENT in 1869 and now for many years our much valued London correspondent, one of the gentlest and best beloved of all men in public life in England, celebrates his eightieth birthday this autumn. In anticipation of this he has allowed a photographer to take his picture, for the first time in years so far as the public is concerned. The venerable historian has recently had a long siege of illness and trouble with his eyes, and has changed in appearance since the last published photograph was taken; but every one who knows him will testify that he has not changed one whit in his never-failing supply of kindliness for all, or in the charm of his talk and his writing.

"My health," writes Mr. McCarthy in response to an inquiry, "is decidedly improving, but the improvement is still somewhat slow in its process and I do not believe there is any probability of its allowing me to return to that political and parliamentary life to which I gave up so much of my time during many consecutive years. I hope, however, to be able to continue my literary work so long as I remain one of the occupants of this globe, and I shall soon devote my attention mainly to the production of another novel. My interest in the progress of the United States is as keen and as warm as it has ever been, and from my earliest boyhood and even childhood my attention was naturally drawn to that Land of the West as we used to call it and which was associated with so much of the prospects and the fortunes of our people. I hope even yet to have a chance of revisiting the United States, with every region of which, north and south, east and west, I made some personal acquaintance in former days, and which my broken state of health has prevented me from revisiting thus far."



Men We Are Watching

BY A WASHINGTON JOURNALIST

Dr. Harvey Washington Wiley,
Chief of the Bureau of Chemistry.

WHEN the Agricultural Department of the United States Government was established, it was considered of paramount importance; but later it lapsed into innocuous desuetude, as a kind of free-seed dispenser to Congress. For years but little attention was paid to it except by those who would come under the dispensation of free seeds. But the Department has been bowling ahead at a great rate recently—not so much the Department itself, as a department, but some of the energetic, vigorous, faddistic youngsters under its control; bureau chiefs who have broken loose from the uncanny quiet of seedy generosity and have been accomplishing marvelous results for the public good, thru their bureaus in the Department of Agriculture.

One needs but to say "Pinchot" to awaken visions of what has developed from the wee, sma' Bureau of Forestry, one of the youngest youngsters of the Department of Agriculture; and what "Pinchot" means in the conservation of natural resources "Wiley" means in the conservation of health and strength and human resources. Dr. Wiley has already made a world-wide name for himself and his bureau, and as much as has ever been said of Gifford Pinchot, as champion of the people in saving the nation's wealth, can just as well and truly be said of Dr. Wiley, chief of the Bureau of Chemistry, for the incalculable value of his life work in preserving the nation's health.

DR. HARVEY WASHINGTON WILEY.

Dr. Wiley looks his part to perfection. He is an ideal exponent of what he preaches, whether he always practises it or not. He is tall, broad, solid, strong; full of health, vigor, creative and combative energy. He has a tremendous lot of confidence in himself and courage in his convictions. He is well past three score, but there are few younger men in Washington. He has a big head, firmly poised on massive shoulders, with black hair, only now reluctantly leaving his forehead and crown—drifting every-which-way when the Doctor waxes drastic in argument or effort. His step is quick and strong. His eyes are clear and keen. His voice—you should hear him, just once, in a public address, or even a private conversation, and you'd never forget the Doctor's voice. His face is strong, rugged and determined—not handsome, but immensely faith-inspiring. When he says so, you can't help believing him; neither can you help being glad he is a friend and not an enemy.

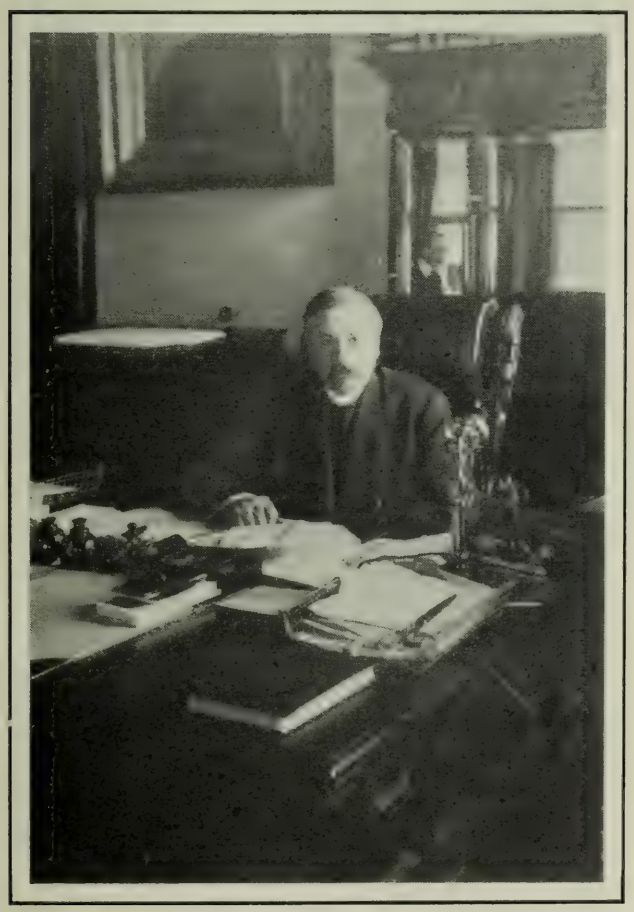
If there ever was a thoroly self-made man, with a job to be proud of, it is Wiley and his Bureau of Chemistry. He was born on a

small farm in Indiana. His father —to quote the Doctor—"plowed for a living and preached for love," but withal was an exceptional Greek scholar, and taught his boy Greek almost before he had mastered English. He was the kind of a father to inspire in his son a longing for knowledge—and the way in which the young Wiley accomplished his education is worthy of note. It marks the man. Between chores, in the hard grind which fell to him as a boy, he got together enough "book learning" to enter Hanover College. Thru the four years' course he paid 50 cents a week for a room. Once a week he tramped home, returning with the next week's supply of food on his back—he lived on corn-meal mush, potatoes, bread and molasses. He never owned an overcoat, but he led his class thru the entire course, both in studies and athletics. Then he taught while he studied medicine in Butler College, Indianapolis. He received his degree of M. D. in 1875, with enough money saved up to take a special course in chemistry at Harvard College, under Agassiz, Peacock and Asa Gray, receiving the degree of B. S. Later he studied chemistry, physiology and pathology in the Berlin University, under Virchow, Von Helmholtz and Hoffman, and under Dr. Zell, the head of the Berlin Board of Health, where he gained the first inspiration which resulted in the devotion of his life to a battle for pure food and drugs.

This is the man who for twenty-six years has been at the head of the Bureau of Chemistry, in the Department of Agriculture. The first sixteen years were hard pulling. He began with a staff of four assistants and a dish-washer, down in the cellar of the old Agricultural Building, and for years worked at a clerk's salary. Now he has a staff of 350 and a building of his own. He found the same public lethargy against him which greeted Pinchot's early efforts, and a Congress which not only reflected but exaggerated it. Only in the last ten years have real results of his efforts been evident; but to realize the gigantic strides which we have taken in that time, since once we were roused, we have but to look back and recall the conditions connected with all food and drug supplies a dozen years ago, and our carelessness concerning them.

Many have risen up of late to claim a share in the glory, and Dr. Wiley is too preposterously modest not to give even the devil his due and more for all the assistance he has had in pushing forward the fight against adulterations. But it goes without saying that for the first impulse, the persistent investigations, the perpetual hammering away at hard, cold facts, the motive power has been Wiley; and for it the nation owes him an incalculable debt. The enactment of the pure food and drug act was his first signal victory, but he was by no means satisfied. He says that it only gave him a fighting hold for the real battle, in which he is now vigorously engaged.

A brain and energy like Dr. Wiley's is not satisfied with any limitations, and he has branched out into almost everything. He is passionately fond of music. He is a poet in his own right; a humorist of rare quality; an after-dinner speaker of uncommon cleverness; an insatiable reader; wide awake to every new thought in world progress. Few men are as popular among their friends or better respected by their enemies than Dr. Wiley.



Prof. Willis Luther Moore,

Chief of the Weather Bureau.

The Weather Bureau is another branch of the Department of Agriculture which has been forging ahead; faster and farther than they appreciate who devote their entire attention to reading the weather reports and then counting the drops of rain which fall—or do not fall—to see how big a mistake the forecaster of the bureau has made. As a matter of fact, precipitation is an erratic and not particularly important element in the work which the bureau endeavors to perform, and to a marvelous degree has performed, for the benefit of humanity.

Storms, the course and velocity of the winds, floods, changes in temperature, are live and essential issues in which meteorology has become a science of incalculable value to the United States during recent years, under the progres-

sive energy of Willis Moore, Chief of the Weather Bureau. The first storm signals were hoisted on the Great Lakes in 1870. Today the entire commerce of the lakes is regulated by the Weather Bureau. Along the Atlantic Coast, from Maine to Florida, shipping interests keep in such close touch with the storm signals that something like a hundred million dollars' worth of floating capital —not counting the value of cargoes— has been known to remain safely in harbors in response to advice from the bureau. The value to the Gulf of Mexico of warnings of West Indian hurri-

WILLIS L. MOORE, LL.D.

canes is well illustrated in the history of the destruction and of the salvation of Galveston. Farmers, all over the country, watch for warnings of change in temperature, to protect their crops. In cities and towns along the rivers forecasts of floods have saved no end of valuable property. The daily forecasts are read by the world at large chiefly to determine whether or not to carry an umbrella; and when, in the immaterial and the least reliable question of precipitation, the weather man goes wrong in our prescribed locality, we shake our fists at Willis Moore and say all kinds of things about him and his bureau. He knows it, but he does not really mind it very much, for he knows—and we ought to—that he is one of the greatest meteorologists in the world and chief of a weather bureau which in efficiency, accuracy and scientific development is far ahead of anything of its kind, look where you will. Professor Moore is not an accident in the office which he holds. He put energy and industry into every step by which he climbed to it and came into his present position perfectly prepared to meet all of the demands which it could make upon him. The history of the bureau since President Cleveland appointed him its chief is a grand vindication of both President Cleveland and Professor Moore. It was rather peculiar, that appointment. There was started a scandal about the Weather Bureau, with the claim that the chief, a Democrat, was using the bureau for political purposes. Moore was working in the Department of the Lakes. He received a wire from President Cleveland, ordering him to report to Secretary Morton. The Secretary of Agriculture told him that the President considered appointing him chief of the bureau; that his commission depended upon his reply to one question. Then he asked Moore if he was a Democrat or a Republican. Moore replied that for once in his life he should like to claim to be a Democrat, but that he was not. Morton told him that the President knew perfectly well that he had voted against him at the last election and rested the commission upon his proving willing to stand by his politics now.

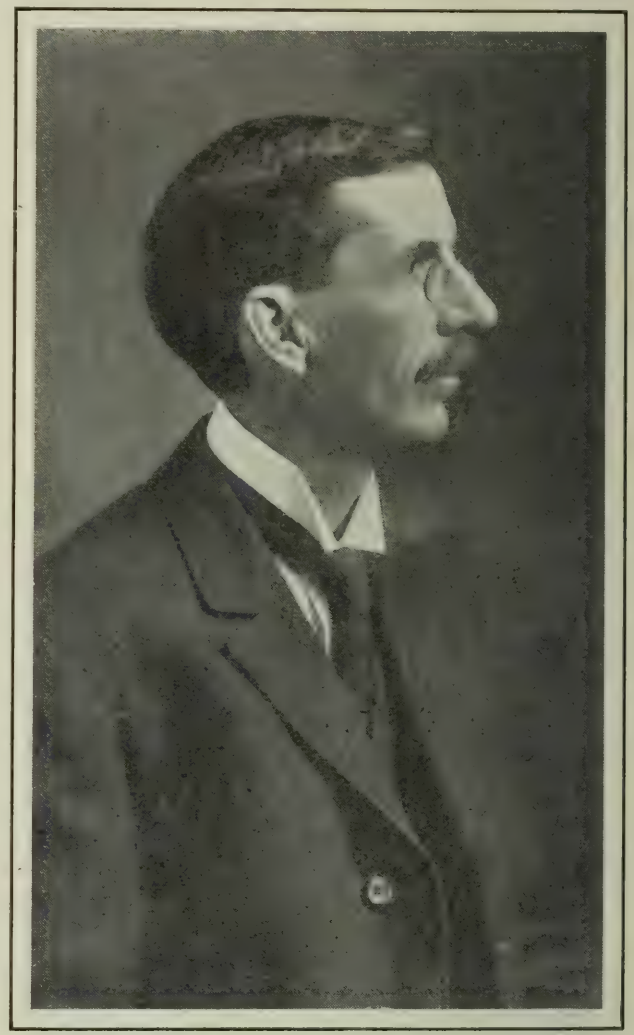
During the Civil War Moore's father was an engineer with the Federal army, and during the last year young Moore was at the front, selling Washington and Baltimore papers to the men in the trenches. He says that he earned more money that year than his father, following Grant's forces to Petersburg and marching with them into Richmond. Then, at his home in Binghamton, N. Y., he learned the printer's trade and began reporting. When he was twenty he struck out for the Black Hills, but was driven back and stopped at Burlington, Ia., where he obtained a position on the *Hawk Eye*, while Bob Burdette was ed-

itor. There he met a man sent out to establish a primitive weather signal station, and the acquaintance developed a determination to master the weather business. Secretary Belknap appointed him to the signal service, and his life since then has been a persistent study and progress in the development of the science which captivated him, and its best application to public welfare, thru the medium of the Weather Bureau.

Professor Moore does not look three score, or act it, tho his hair is white. He has a fine face, with earnest eyes, and a cordial inclination to aid others to see things as he sees them. He is not a large man, but is nothing lacking in energy, magnetism and the courage of his convictions, which have recently taken a turn drastically conflicting with the accepted theories that forests encourage rain, preserve moisture and prevent floods. In a recent report he has made on the subject, Professor Moore says:

"Precipitation controls forestation, but forestation has little or no effect on precipitation.

"The run-off of our rivers is not materially affected by any other factor than precipitation."



Dr. Beverley Thomas Galloway.

Chief of the Bureau of Plant Industry.

Another rare public benefactor in the Department of Agriculture is Beverley T. Galloway, Chief of the Bureau of Plant Industry. What Pinchot has been to forestry, Wiley to pure food, Moore in meteorology, Galloway has been in the field of ground-growing things.

The immediate value of Dr. Galloway's work is not so easily appreciated —not so amenable to popular notoriety —because it appeals directly only to the limited class who benefit; and even there it does not bear a Galloway tag, but the importance of what he has done and is doing for the general welfare is almost beyond expression.

In 1888 he was made chief of the little division of mycology in the Department of Agriculture. In 1901 all plant work was consolidated in a Bureau of Plant Industry, of which he was made chief. Under his administration it has become one of the largest and most important bureaus of the Department, employing over 1,200 men, more than two-thirds of whom are engaged in practical and scientific agriculture, in investigations which touch every State and Territory. All diseases of plants are carefully studied in the laboratory and field, and experiments are constantly going on

BEVERLEY T. GALLOWAY.

to discover any possible improvement by breeding and selection. Agricultural explorations are always in progress in foreign countries to secure any new plants or seeds adapted to this country, and at home to discover the best localities for fruits and the wisest methods of cultivating, harvesting, handling, storing and marketing. What appears to the consumer as a series of accidents is, in reality, a scientific system resulting from the researches of Dr. Galloway's bureau. Millions of dollars have been saved to the farmers and fruit growers of the

country, and the money value of the introductions which the Bureau of Plant Industry has made into this country would alone pay the entire expenses of the Agricultural Department many times over.

There is Durum wheat, for example—a godsend to the farmers of the semi-arid West, enabling them to grow large crops in regions too dry to produce even sage brush; and the whole system of dry farming, for that matter—with dates and Japanese rices for the South and oats and new alfalfas for the North.

Still more important are the victories which have been gained over plant diseases—the dreaded pear blight, which threatened to wipe out the entire pear industry of the Pacific Coast; the breeding of sea island cotton and cow peas for South Carolina, capable of withstanding the wilt disease, are only incidents.

Dr. Galloway is a small man, earnest to the last degree, hard working far beyond his physical ability; intensely devoted to his field of labor; a charming man to meet, but utterly devoid of any characteristic seeking commendation or encomium. He was born in Mollersburg, Mo., in 1863. It was necessary for him to make his own way in the world, and after a common school education he learned the drug business; but living plants were a commanding hobby even then, and as soon as possible he abandoned a promising profession to work his way thru the Missouri Agricultural College, graduating in 1884. After completing the regular course he took three years more in special studies and succeeded in introducing mycology and plant pathology into the studies of the institution. He came to the Department of Agriculture thoroly prepared for his work, and has made good all along the line. It is not a work for which he will ever receive his just meed of popular applause, but those who understand enthusiastically declare his achievements little less than wonderful, placing him among the foremost of those devoting their lives to the public good.

WASHINGTON, D. C.

A Century of the Argentine Republic

BY JOHN BARRETT

DIRECTOR OF THE INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS.

THE Argentine Republic is entitled today to take rank among the most progressive countries of the world. It is advancing so rapidly in commerce, wealth, influence and population that it is worthy not only of the attention and study of all men interested in the evolution of nations, but of actual visit and investigation by travelers and persons who wish to see what is going on in other countries than their own. In view of the fact that Argentina is to celebrate its one hundredth anniversary with a great international exhibition, and as there will take place also this summer in Buenos Aires, its own beautiful capital, the Fourth International Pan-American Conference, there should be a great pilgrimage of representative men of the United States and Europe to this sister nation in the southern end of South America. It is no exaggeration to state that ninety-nine per cent. of those who may take advantage of this opportunity to familiarize themselves with a great Latin-American country will come back expressing profound surprise and pleasure at what they have seen and learned.

The Argentine Republic is most favorably located for great development in agricultural industry and population. It lies almost entirely in the south temperate zone and has as great a range of climate as has the United States. In its hottest portion it never gets as hot as it does in the hottest section of the United States, and in its coldest portion it never gets as cold as it does in the coldest part of this country. It reaches for over

twenty-five hundred miles north and south, and its greatest width is approximately seven hundred and fifty miles. Properly to describe its area, it might be stated that all that section of the United States lying east of the Mississippi River could be placed within its borders, and there would still be a little room left over. In this reach of country, moreover, as large a portion practically is suitable for maintaining a large population as the corresponding section of the United States.

The total population of the Argentine Republic today is approximately seven millions, and yet this is only a small number of people, compared to the great population which it must hold at some future time. Comparing Argentina with other countries of the world, no reason can be given why it should not some day support in prosperity a population of 100,000,000.

The fame of its capital is world-wide. Buenos Aires is one of the remarkable cities of the world. It is sometimes called "the Paris of South America." This may be true, but it could also be called in its enterprise and progressive spirit the "New York or Chicago of South America." It now rightfully boasts of a population exceeding 1,200,000, and there are only one or two cities in the United States and Europe which are growing more rapidly. If it continues at its present rate of increase it will reach the 2,000,000 point within the next ten years. Its parks, principal avenues, public buildings and private residences command the admiration of all visitors, and it is one of the best-governed municipalities upon the Western Hemisphere. The average American city, not excepting New York, Chicago, Boston and Washington, could learn much in successful, clean and even economic administration from this capital of Argentina.

The city possesses some individual features which make it stand out among the cities of the world. It has a club, for instance, which is housed in a building more expensive than that owned by any club in New York or London. It possesses the best-equipped newspaper plant of any journal in the world. Its streets are bordered with buildings possessing a harmony of architecture which makes the average resident of Washington regret that his city has no artistic control of buildings and houses. The harbor facilities of Buenos Aires are an excellent illustration of the progressive spirit of the Argentine Government and people. Recently that city had nothing but the shallow water of the River Plate washing its shores. The deep channel was far, far away, and large vessels could not come within many miles of the city. By the expenditure of millions and millions of dollars, Buenos Aires has now a system of docks and wharves that will compare favorably with those of any port in the world, and the Government is now deepening and extending them so that the largest vessels can make use of these facilities.

Perhaps the most striking thing about the Argentine Republic and the one which is the best evidence of its prosperity and wealth is its foreign trade. If, as is often said, commerce is the life blood of nations, then Argentina is very much alive. Last year it bought and sold with the rest of the world products valued at the magnificent total of $700,000,000. This practically means $100 per head, which is a larger commerce per person than that of any other important nation upon the face of the earth, with the possible exception of Holland and Belgium. When, moreover, we realize that this represents an increase of several hundred per cent. in the last fifteen years, we cannot help applauding the country for what it has accomplished.

But commerce is not the only thing that augurs well for the future of the Argentine Republic. The people themselves are generous, hospitable and vigorous. The average type of man or woman is tall, healthy and wholesome in appearance and character. The young men are growing up to a realization of the great responsibility resting upon them to make Argentina one of the principal nations of the world, while the women are not only able to grace social occasions as well as any women in the world, but also to preside in ideal manner over homes as mothers and hostesses. No North American ever goes to Argentina without regrets that he must leave, and

whenever he returns there he feels almost as much at home as he does in New York, Washington, Chicago or San Francisco.

It is certainly most fitting that all North Americans should take a deep interest in the celebration of Argentine independence, and if they are not already familiar with that country's history and its present development they should take steps to acquaint themselves with it. The International Bureau of the American Republics at Washington will only be too glad to tell them how they can gain this information, not only about Argentina, but about all the other countries of Latin America.

WASHINGTON, D. C.

A City's Moral Lesson

BY HERVEY WHITE

AUTHOR OF "DIFFERENCES," "QUICKSAND," ETC.

IT has always been a matter of interesting speculation to me just how much a city stands as a leader and a teacher to the surrounding country on which it feeds and from which it draws its inhabitants as well as its sustenance. Those who live in the metropolis I find like to think of themselves as the ones who set the fashion not only in dress but in ideas; in books, in architecture, in laws, in manners, in customs, and in methods of education. I have never heard them boast so much of morals. In fact they are more wont not to consider that. They look rather to the country as teaching them in morals. The provinces are often considered the source of the virtues which their temperance engenders. But why should this follow as the exception? If cities have their vices to teach their children, why not their virtues as well?

As I have walked through the different countries of Europe I have often speculated on this influence of the cities. In architecture it is most noticeable to the traveler. Take the churches, for instance. It is the cathedral that seems to set the fashion for all the surrounding churches of the villages. In the province of Venice are everywhere pitiable imitations of St. Mark's, often with their miniature *campaniles*. In Tuscany we see would-be Brunelleschi's. In Lombardy Verona's simpler gothic. And invariably the traveler is set wondering whether the movement has been downward or upward. Is it not possible that the expressions of the country have found their ultimate in the creations of the city? That small failures have contributed to great success, rather than that the great beauty has been debased by imitations? As a matter of fact the current flows both ways. There is a constant interchange of ideas and material. But we provincials do learn from the cities a great deal and their teachings even in morality are not lost on us.

Up here in the Catskills we have lately had an example in the undertaking of the building of the Ashokan Reservoir. The city has come out to buy its land of the farmer: a chronicle of its methods of procedure is not without data for conjecture.

To begin with, our native farmer has not perhaps those methods of business inculcated in the doctrines of his great religious Teacher. To buy cheap and sell dear, that is, to buy at his neighbor's disadvantage and sell if possible to his ruin has been learned from the sermons of the stones that he has from childhood picked off from his patrimony. But even in this robbery he has his standard of morality. To get twice as much for a thing as it is worth is a virtue, but to get four times may be considered even selfish. Tho with a shifting scale, there is still a significance to the word usury. Take half of your brother's goods and you are a virtuous man; so long, of course, as you keep within the custom. But take all of them—no; there are

those even among the professionally virtuous who draw the line.

Under such conditions, New York City comes to buy our farms. A large territory is soon to be condemned. Witness the accompanying phenomena.

The first plague is the descending of the lawyer. The farmer has already dealt with him to his own eye opening, and knows enough to refuse to sign anything. He is breathless, however, at the opening dialogue.

Lawyer (after preliminary explanations). How much will you ask for your farm?

Farmer (canny, knowing that he would gladly sell everything for two thousand). Four thousand dollars.

Lawyer. Oh, nonsense man, put on a price. The City of New York is rich.

Farmer. Well, five thousand dollars.

Lawyer. Pshaw! We may as well stop trying to deal with you. There is no commission worth while in such a sum. We only ask twelve per cent. Put on a price. You ought to have pay for your affection for the old homestead. Put on a price and we will stop to talk business.

Farmer (who all his life has been pining to get away from the poverty stricken old stone and brush lots). Well, I did not think of the sentiment. Suppose I ask six thousand dollars.

Lawyer. More. More. We will not touch it at such a pittance.

Farmer. Eight thousand.

Lawyer. More.

Farmer. Ten thousand. (He has just gone through a week's haggling for six shillings, but he is now rioting with all senses of proportion.)

Lawyer. Ten thousand is not half enough.

Farmer. Well, say twenty thousand.

Lawyer. Now you begin to talk like a man of business. If we get you twenty thousand for your farm will you let us have our twelve per cent. as agents? You don't have to sign any papers.

The farmer assents, the bargain is made, the lawyer drives out of the yard leaving the farmer wondering why he was not asked to raise to forty thousand, or even a hundred, or a million. His brain is fairly swarming with big figures. Here ends the first lesson of the city.

But the lawyers have not finished with their clients and a wave of improvement extends over the valley. The farmer soon learns that while his hundred or so barren acres may in themselves bring the fabulous sum of twenty thousand, they could be made to double with improvements and he looks about with envy on his neighbors. A place will sell better if the buildings are repainted, no matter if they are to be torn down the next year. The house will look better with a veranda. A new addition will help it out immensely. He has no money for these improvements. Well, his lawyer stands ready with a loan for him. From the lawyer he also gets suggestions. He has perhaps an old deserted house, tumbled down and abandoned for many years. Fix it up, glaze it, paint it, add a porch, call it Woodlawn Cottage, have a sign to that effect painted neatly on a board, cut the brush a little and he has added a value of five thousand dollars. Perhaps he has been thinking even of building a new house. Well, why not do it now? He will never have another chance. In a few years the country will be under water. Maybe he builds a boarding house, maybe a store, maybe there is an excuse for a saw mill. Build them. It is easy to borrow money. Kerosene paint is cheap and shines the first year as well as any. How are the appraisers to know everything? One house is moved back a few rods from its barns, an artificial lake is established, a sign painted, and the old farm house is now a country seat, worth five times what a farmhouse would be anywhere. So the condemned valley is decked out in its burial clothes and good materials and good labor are put to wanton waste and the second lesson is given us from the city.

The appraisers are the next visitors to our farmer. Three of them are chosen for the city and three are supposed to represent the community. They each draw five dollars a day and men who have been glad of a job at two dollars now drive about in their carriages, expenses paid, look wise and take their gossip with the neighbors, well pleased

to play the bountiful and curry favor, for who knows what political preferment may follow after? They have learned already how men must not make haste who serve the city, and they make their job extend on thru the seasons. When a railroad will buy a right of way thru the country, it is the custom for one man to visit the condemned property, make an offer in fifteen minutes for the damages and if the farmer will not take it let him sue. As a matter of fact he does take it, for the offer is a generous and fair one, and he has learned that to bring suit is to lose, and to get much less than has been offered, let alone the cost of the suit. But in this case with the city's business things are different and "graft" becomes a new word in his vocabulary. After the appraisers' deliberations there will be a trial before a commission, and the third lesson given by the city is but a step toward the understanding of the fourth.

The commission is a noble institution. Altho the members are of the most average intellect they must receive not five dollars a day each, but fifty. What a mistake that there are but three instead of six. Six can think of so many more funny stories. Our farmer watches the time when his land shall come into the court. Perhaps the trial is near the end of the session and the commissioners are willing to prolong their well paid labors. His case is docketed for Thursday. Thursday is so near the end of the week, the city's lawyer gets a postponement till Friday and nothing is done that day to the tune of fifty dollars a day to each of the commissioners, five dollars to each of the appraisers and the witnesses, not to speak of the lawyers who must be paid and the expenses of the court and its loafings. On Friday the city's lawyer gets another adjournment, for apparently they like the hotel life of a county seat and another day passes in doing nothing. Ashamed to ask for a third day's adjournment the city's lawyer gets the farmer's lawyer to ask for it. Saturday is not anyway a good day for business and once more the little case is held over till Monday and the whole court goes out for a social drink together. On Monday the case actually comes to trial. The farmer knows his cue well by this time. His sentiment for the old homestead has grown enormously and he actually can bring tears to his eyes as he claps on an extra five thousand. The city's lawyer objects. The farmer's lawyer argues. The witnesses witness, and the commission hears the evidence very patiently. At length the case is settled by knocking off two thousand, three hundred and thirty-six dollars and seventy-two cents from the last extortion and the old farm that cost the farmer fifteen hundred dollars in trade ten years ago now brings him his round twenty-two thousand, quite apart from his extra improvements if he has not been too timid to build the kerosene painted houses. The fourth lesson has been an instructive one and he has learned it and he goes back to await the next visit from his lawyer, for he has been primed that there are other eggs to hatch.

Perhaps the lawyer finds our farmer is also a carpenter or a mechanic. Almost any farmer has built a shed some time or other, perhaps even he has done so for his neighbors, since building of late has been much the fashion. "Ah, well, then," says the lawyer. "The city is doing great damage to your business in requiring you to move from the neighborhood. You should sue for at least two thousand dollars," and the farmer likewise thinks that he should. It is a disastrous thing to have one's business taken from one, and there is no thought that the same community will be needing new houses, as they buy lots in the neighboring villages and prepare to live on the prizes they have lotteried. So the fifth lesson is entered upon with avidity and "poor old New York" is once more driven to the milking.

The writer owns a farm outside the condemned district. The lawyers even favored him with an early visit. Below is the gist of the conversation:

Lawyer. Let us undertake the collection of your damages. Of course you do not need to sign anything.

Writer. I think my place will not be damaged by the reservoir. On the contrary, the value will increase. I will have a view of the lake,—

Lawyer. Ah, yes, but you never can

tell. Now this road that runs past your residence, it may be this road will be closed.

Writer. I should prefer that it were closed. I like the quiet.

Lawyer. But you could get damages, my dear sir, heavy damages. We ask only twelve per cent. You sign nothing.

Writer. Why should New York pay me damages if I am not damaged?

Lawyer (looking wild with alarm. Is this an anarchist who would uproot the foundations of society?) But if you can get the damages? he repeats.

Writer. Why should I get damages if I am not damaged?

In the end the lawyers drive away in blank astonishment. They have never met with such insanity before. They have explained that I have to sign nothing.

After driving some distance they turn around and come back. The spokesman gets out of the buggy and comes toward me. "I know what is the matter with you," he says with a pitying smile that withal has some strangeness of respect in it.

"Well?"

"Why, you have a conscience! You have a conscience! We have talked it over and we have decided you have a conscience." Then he gets back into his buggy quite hopelessly. Even lawyers are sometimes gifted with a faint gleam of ethical illumination.

What will become of the farmer in the end? At present he is studying the situation. But his son has grown ambitious with fortune. He will go down to New York, who seems a gentle mother and he will be, yes, he will be a policeman.

"Poor old New York!"

WOODSTOCK, N. Y.

To a City

BY CHESTER FIRKINS

AND thou art now the master; I, the slave;
The days of my defiance are as dust
On the departed years' swift-crumbling pave;
The sword of my rebellion is but rust;
Against thy spell I am no longer brave.

Nine breathless summers I have seen the kill
Of blood-beamed suns upon the stony street;
Nine winters I have watched the wanton spill—
The price of lives at Pleasure's dancing feet;
Nine years beheld man worship his own will—
Pure Faith forgot and Truth made obsolete.

And every staring face among the throng—
Poor puny sons of greed-besotten men—
Turned me with yearning to the calm, the strong,
The clear-browed people of my West again;
And every roaring day but made me long
For benign silence in some mountain glen.

Today I am returned from the clean wild,
Where only Storm's deep organ preludes mar
The hush of wood-cathedrals, river-aisled;
Where Earth's pure altars of communion are,
'Neath ceilings of the night, inlaid and tiled
With ivory of moonlight, pearl of star.

I am returned unto the man-made hills—
The windowed cliffs whose crevices are homes—
But a new light my startled being thrills!
Here storm is slaved! The human river roams
O'er bedded lightning, tamed to human wills,
'Mid thunder, thru subaquean catacombs.

I hear the tumult of the conquered seas
That beat their vain rebellion 'gainst thy wall;
Eld Night illumed in burning harmonies
Of lights that fashion morn from even-fall;
Time, sound, the winds and the wide distances
Are but the serfs and vassals of thy hall.

And thou art now the master; I, the slave;
But 'round my bondage is a glory thrown;
I have found Peace upon thy echoing pave,
Silence in throngs, beauty in builded stone—
Where Nature yields, I dare not lift the glaive!

NEW YORK CITY.

American Dramatists at School

BY WARREN BARTON BLAKE

"College theatricals" is a familiar phrase, evoking a picture all its own. Two pictures, to be precise. The first is a vision of maidens acting, say, Shakespeare, tho sometimes Sheridan or Goldsmith; often out of doors. The second is a pageant of college youths in more or less outlandish costumes, doing a musical piece of something below the Broadway standard, both in vulgarity and merit. Today, there is a third sort of college theatricals. As in the case of the maidens doing Shakespeare, the plays given are worth taking pains with. As in the case of the musical monstrosities, the lines and situations are original, if not with the players themselves, at least with their college mates. And the scene of these plays is Harvard University.

The theater has, no doubt, taken a great hold upon all our colleges and universities. From Atlantic to Pacific, students registered in every department of instruction are unofficial students of the stage.

SCENE FROM DAVID CARB'S "THE NEW AGE."

In giving theatrical performances, however, there has been one great handicap at institutions not co-educational. Tho they have produced French and German plays, or the less familiar Elizabethan comedies (as the Harvard chapter of the Delta Upsilon has done), or modern pieces (as has the Yale Dramatic Association), one drawback has marred all their productions. College men are clever, but, except in musical

SCENE FROM HERMANN HAGEDORN'S "THE HORSE THIEVES."

comedy, one regrets their undertaking women's parts. The plays given have suffered, as wholes, whether it has been a case of Molière or Ibsen, Dekker or Sudermann. And often the female rôles have been curtailed, to sort better with the muscularity and manly speech of their interpreters—football stars, off stage.

It would, doubtless, be too much to

SCENE FROM PAUL MARIETT'S "THE BETTER WAY."

say that the fact that the social club looks to its own membership for all its players has been the *raison d'être* of the Harvard Dramatic Club, founded two years since. And yet one may suggest that one prime reason for that club's success has been the circumstance of its alloting female parts to women players; just as another has been the employment of professional stage managers. Radcliffe has furnished many of the "leading women"; Radcliffe, the Harvard Annex that is no less stage-struck than Harvard itself. But it is the work of the new Harvard Dramatic Club that is the subject of this article.

As has been hinted, the new club exists, not only to act plays, but to call plays into being. Organized in March 1908, the first president was Edward Sheldon, of the senior class; who has, since that date, written two plays professionally produced: "Salvation Nell," acted until recently by Mrs. Fiske, and "The Nigger," seen this last season at New York's New Theater. To act as final judges as to plays, a Graduate Committee was elected, whose members are Prof. George P. Baker, Winthrop Ames, director of the New Theater, and H. T. Parker, dramatic critic of the Boston *Transcript*. And from about a dozen plays by Harvard men submitted, in the first competition, a four act tragedy of modern life, by Allan Davis, 1907, was chosen for the *première*.

In December of the same year, the play was staged in Cambridge and in Boston. The theme is half suggested by the title: "The Promised Land." The writer, himself a Hebrew, deals here with his race thoughts, and with figures of clear visioning and vivid imagination. One was interested, in spite of any prejudices, in this mordant drama of the Zionist movement in modern Europe, and the failure of this movement thru certain defects in the character of the "successful" Jew. "The Promised Land" all by itself amply justified the Harvard Dramatic Club's ambition and activity.

Since the production of "The Promised Land," Mr. MacKaye's fantastical "Scarecrow" has been acted by the student players. There is little need to characterize the play in view of the fact that, having seen the Cambridge performance, Mr. Edgar Selwyn has secured it, and promises it for his season of 1910-1911. Of the shorter plays given since "The Promised Land," one is "The Horse Thieves," farce of the frontier, by Hermann Hagedorn, whose adaptation of a Danish play for the New Theater has, since then, been seen. "Five in the Morning," a tragedy of modern New York life, is the work of the same author, and was included in a volume of his verse published last fall by the Houghton-Mifflin Company. Both

SCENE FROM LEONARD HATCH'S "THE HEART OF THE IRISHMAN."

of these plays were given in the spring of 1909. So, too, were "Death and the Dicer," adapted from Chaucer by Frederic Schenck, of that year's senior class, and "The Heart of the Irishman," suggested by one of Lever's stories, by Leonard Hatch, '05, whose "Three Strangers" was produced in Cambridge a year before the club's formal organization. Each of Mr. Hatch's plays is in one act; in each the concentration of character and incident is as intense as in a drama of the films, while the literary

quality is as prominent as the technician can afford to make it in a play written, essentially, to be acted.

Partly because of their own qualities —for such plays as I have named prominently are more than "promising" —partly because of the work of certain fairly recent Harvard graduates for the professional stage (not Mr. Moody's alone, and Percy MacKaye's, but that of such members of the club itself as Mr. Sheldon and Mr. Hagedorn), it is interesting to note the rise of these, the more youthful among Harvard dramatists. Their product cannot be dismissed as "academic"; their interest in life—real life—and in poetry—real poetry—is as deep as any of their predecessors'. The variety of that interest appears from the program of the plays offered this spring. New York is the scene of Mr. Hagedorn's farce of "Marvelous Bentham" and T. H. Guild's more moral drama, "The Better Man"; romance is represented in David Carb's "New Age," (subtlest and most tender of all these later pieces, for all its scene is the Richmond of '65), and in Paul Mariett's "Better Way," adapted from the Spanish of Alarcon. Mr. Guild is a graduate student at Harvard; Mr. Carb a graduate of two years' standing, and Mr. Mariett a college senior, the only undergraduate of the four. In coming seasons we shall discover whether college students can write plays as well as act them, which still remains to be demonstrated. As the matter stands, the dramatic club's usefulness has consisted in its fostering of the dramatic interest in the college, and in the stage which it offers to the graduate-dramatist of a few years' standing.

When we next hear of these young playwrights they will have won—some of them—a wider public. For their youth is vigorous, their zeal is great, and their work is nowise precious. And they must profit by the fact commented upon recently by a British critic—possibly Mr. Archer—and reported by Professor Baker: "The greatest change I note since my last visit, some five years ago, is the great demand among you for plays by dramatists of your own, treating American life. Not even our English plays seem to be in the old demand." Unquestionably, America *does* want American plays; and fault has been found this winter with the New Theater management for failing to "discover," in its first season, more "home talent."

Is not the enthusiasm and the energy of these college dramatists a hopeful sign, however, for the future?

WEST CHESTER, PA.

Mors Vincta

BY KELLY MILLER

I STOOD at the foot of the dying bed
Of my darling boy, as he gasped for breath:
And the doctor said "'Tis the gasp of death;
This is the end"; and he turned his head.

Then the throes of death asseizéd me,
With its corporeal agony,
And the anguish of Gethsemane.

They wrap my body in a shroud;
I hear my loved ones wailing loud.
They chant the solemn litany,
Pronounce the heart-meant eulogy.

I feel the thud of the frozen clod
On my coffin lid, as they pile the mound,
Upon my dark house in the ground,
Inbuilded underneath the sod.

I drink the dregs of the cup of dread,
In the dismal City of the Dead.

Then some one touched me, stupefied:
"Behold the child breathes free again,
Restored to life thru conquered pain."
I murmured: "God be glorified."

Now come, O Death, when you will, prithee,
And Thou, O boastful Grave, perdee,
No more your terror daunteth me;
I've passed your gates triumphantly.

WASHINGTON, D. C.

Slaves' Reminiscences of Slavery

BY MARY WHITE OVINGTON

[Miss Ovington has of recent years devoted most of her time to helping the negroes of New York City. The following article is based on conversations she had with some old ex-slaves on a recent trip to Alabama.—EDITOR.]

WE have had many stories of slavery told by the slave owner, pretty tales of faithful servitors and brave and generous masters; but the men and women who were held in bondage have rarely spoken. The following sketches are given, just as they were recited to me by trustworthy colored men and women of Southern Alabama. They are not unusual, but typical of the recollections of hard-worked field hands who were early sold away from their families into the Gulf States. As these were the men who labored while others lived on their toil, it seems but just that we should for once listen to the story of slavery as it seems to them as they recall it now after these many years.

"It's jes' like I tell you, ma'am. I ain't guessin' these things, I know's 'em"

Uncle Ben sat by a coal fire in his four-room house, his long, spare frame clothed in old snuff-colored garments. According to his neighbors he had lately discarded a pair of trousers that had served him for twenty-two years. His coat today showed a frayed sleeve, but he wore it with dignity. Ever since the war he had been a power in his community, an upright man who had tried to secure honest government and who had never sold his vote. Something of prosperity had come to him, but today he had forgotten the new home earned by his labor and that of his wife, and was returning in thought to the time when he was a slave.

"Yes, we was worked hard in those days, we sure was. You think, maybe, people done have a rest on Sunday? I done never see it. Half-time work on Sunday pullin' fodder in the field for the mules an' cows. Then Sunday mornin' we'd build fences for the cattle, ole fashion' bridge fences, we calls 'em. The women too was worked terrible. You see the railroad down yonder? Women helped grade that railroad, an' chillen was born on that railroad. Other times they'd plow in the field an' when night come they mus' spin two cuts o' cotton. Don' matter how tired they moight be, they mus' spin their two cuts or in the morning they'd be whipt. That's what I's tellin' you.

"There were terrible persecution then. I's seen men with fly blows. You don't know what that mean, perhaps? Fly blows is what we calls the meat when it turns to maggots. They'd whip a man until he's so warm the blood creep thru his shirt, an' the flies 'ud come. Workin' out in the fiel' all the time, bendin' over the hoe, an' the flies suckin' the blood. Some men wouldn't stan' it. They'd take to the woods, an' then the dogs 'ud ketch 'em. After that they'd be chained, an' you'd hear rattling like they was chained logs. When night comes, there by deir bed there'd be a staple. The overseer'd come along an' lock the chain to the staple so they couldn't get away.

In the mornin' the overseer let 'em out. They done put' em, too, in screw boxes, what you call presses. When they put down the foller-block, then the nigger was tight. It was out-o'-doors an' he was like to freeze. They chain him in the graveyard, too, keep him there all the night to skeer him. Oh, I knows what I's talking about, *yes ma'am*. Now an' den you can ketch some ole person who knows, who bear witness like hallelujah meeting, to what I say.

"Some men done run away an' *don't* git caught. When the Yankees come lots o' men walk out o' the woods. They'd wore iron so long that when they was cut off they dropped like they was dead. They was wore to the bone.

"Every fall they sell people jes' like cattle. They go from place to place drivin' us along like as ef we was mules or cows. Sons 'ud be taken from their mothers, women from their husbands. Never know'd what sort o' marster yer was goin' to get. Some marsters was putty good. Now my marster, my ole marster, was kind to me. My mother, she were cook at the house, an' my father were the miller. They were very respectable folk. My marster used to tell me always to speak the truth, an' he done never let the overseer whip me. When I were big I drove the horses for him, 'cept when I were needed in the field. I see a heap o' persecution, an' my marster, he see'd it, too. Yes, he certainly see'd it.

"When ole marster died all the hunnerd an' forty-five han's mus' be hired out, and when the heirs come of age they was sold. I was hire out down at the town below here. "Come up on the block," a man shout, an' after we go up he'd say, "Here's a good nigger to be hired out. What you give for him?" Ef yer didn't want to go to the man that bid for yer they'd tell yer to talk an' say so, but it done make no difference. He'd hire yer, jes' the same. I brought a good price. A heap o' people done want me fer I could do a sight o' work. Um, Um."

When Uncle Ben said "Um" his mouth closed tight and his chest swelled. He still felt his power as a laborer. "I stay with that man for two year an' then the heirs sol' me. That were just befo' the war. My new marster went to the fight, an' he lef' everythin' in my charge, house, store, horses, everythin'. I done the bes' I could with 'em, but they was troublous times. We was afraid to talk of the war, 'cose they hung three men for talkin' of it, jest below here. Yes, ma'am, it's like I tell you, *I knows.*"

"When that gran' ole freedom bell rung I see the niggers goin' to the city; yes, an' I see the white folks cut off women's breasts. They was mad, jes' mad, an' they wouldn't let the niggers back on the plantations, not then. The women 'ud have to sleep in their quilts by the road. Um, Um, it was terrible. I hasn't half told you how terrible it was."

If only the half had been told I was not then able to listen to more. As I rose to go, I asked, "You lived comfortably after the war, Uncle Ben?"

Yes, ma'am, pretty comforble. I foun' my wife, an' we done bin man an' wife for fifty-one year. I work an' I tries to do the best for my neighbor an' myself. But the white folks down here, honey," he spoke confidentially, and with a fuller dialect than before, *"all dey cares fer in de nigger is what dey kin make outer him.* Dey *says*, 'We alls is glad you is gettin' homes.' Dey don' like it at all. Dey likes we niggers fer all de corn dey kin get out er us, an' all de cotton dey kin git out er us, an' den dey's done."

"De hardes' part ob dose days," Aunt Kitty said, "were being sold. It done seem as tho yer couldn't to bear it. When I was sold away by de speculators it seem like I griebe ter death. I had a good mudder and sisters and brudders, but one mornin' dey took me off an' I never see'd one of 'em again. I don't know when my mudder died, she mus' be dead now, an' I never see my little sister grow up. I were put on a ship, an' dere I stayed for weeks an' days. It were dark an' I were feared an' homesick an' seasick. I lan'ed in Mobile, an' from dere I was sent to New Orleans an' to Texas. When my marster bought me he paid a heap o' money for me, eighteen-hunnerd dollars. 'If you don' make dat money good what I pay for yer,' he said,

'you know what I do ter yer.' Dat marster died soon, an' I lef' Texas an' were brought up here. Dey work you hard in Texas, most till midnight. Here I was cook, an' I gets' along tolerable good. My missus was good to me.

"I's goin' to tell yer somethin'." Aunt Kitty lowered her voice and looked around cautiously; then she straightened up and laughed. "I needn't be skeert to tell about it now, but if I'd got co'ght den, oh, my! my! Dey wouldn't have stopt at a hunnerd lashes, it 'ud ha' been a thousand. Feedin' a runaway nigger! When it were very cole he used ter creep unner my bed." Her voice dropped again. "He weren't much mo' dan a boy and when I come in my cabin and see his woolly head down dere I wouldn't seem ter notice, but I'd leave somethin' lying about ter eat. When I come back it 'ud be gone. Sundays I'd go a piece down de road to de woods an' leave some corn. Dat nigger were Isaac Jones. He runned away for sixteen months. I knows about it cose I feeds him. Feeding runaway niggers! Dey'd ha' killed me ef they'd ha' found me out den. But dey can't hurt me now." She put her hand on my arm a little timidly. "Can dey, honey?"

When I visited Isaac Jones the following day I could not see that his former runaway habits had affected his character. He was no rolling stone, but owned an attractive house and one hundred acres of land. It was plowing-time, but he left his mule and sat on the porch telling me some of the incidents of his early life.

"I was only a boy when de war come," he said, "my marster and missus were good, both of 'em. My marster didn't believe in owning slaves, an' he jes' had a few that were lef' him. When de war come he went to de front and was wounded an' den killed. He were one dat didn't want de war. I 'member Colonel Smith, he said, 'dis war can' las' no time. De Yankees don' know enough to go aroun' a hill.' But my marster, he said, 'One Yankee has got more sense dan ten Suddeners.' When he died missus went ter Montgom'ry an' we alls was worked unner an overseer. We had ter make shoes in de tan yard. I was allus kept dere. I could make five shoes a day, put de sole on, peg 'em an' trim 'em. We darkeys had ter make all de shoes for de soldiers. There was some dat jes' took the cowhide an' cut it an' tie it aroun' der foots. Dey call dem moccassins, but dey were putty poor; when dey were wet you couldn't put 'em on.

"De overseer treated us cruel. I weren't 'custom to no cruel treatment an' when he commenced his doin's ter me, I lef'. I dodged about for sixteen months, sleepin' in de woods when it were warm, an' when it were cold hidin' in a cabin."

"Did you ever hide in Aunt Kitty's cabin?" I asked.

"I sure did. Sister Kitty helped me. Colored folks was more together in dose days dan dey are now. Dey'd take risks in dose days."

"But how did you keep the dogs from getting you?" I asked. "I should suppose they would have run you down."

"It's a mighty hard matter, ma'am, to run some folks. Hounds couldn't run me. One ting I'd do. I'd go ter de graveyard an' open a grave where the people been buried about a week. When I put some o' that dirt in my shoes there weren't a hound could run me.

"We weren't allowed to know nothin' about the war, no. But when de fightin' 'bout Selma come, we guessed what was happenin'. Den my missus got back, an' she ask de old folks about me, an' I come out o' hidin' to see her. She tol' me she was glad I run away, tho she had los' a heap o' money on me on account o' my not makin' shoes. I went back to work an' I made two pair o' shoes for her an' one for her mudder an' one fer her sister. Den the war ended and here I is, where I was in de ole days. My missus married again, an' she live up in Birmingham where she has a heap o' money. She come down to see me two year ago."

Aunt Kitty, Uncle Ben and Issac Jones had all told me of the woman who hid with her children in the woods. Uncle Ben, a conservative in his estimate, placed her time of hiding at two years, but the others believed it to be four or five. She had been cruelly

treated and had run away with her children—were there two or three?—seeking shelter under the ground. There another child was born to her. If early in the morning you went out to the swampland and looked very carefully along the ground you might see a little line of smoke: that meant the woman was doing her cooking. At dusk you sometimes caught a glimpse of a wild, naked, little figure moving in and out among the trees: that was one of the woman's children. It was not wise to go near the place, but one might drop a piece of food at the wood's edge confident that it would reach a little hungry stomach. There was a trap door by which the woman's home was entered, a door so covered with leaves that no one could see it, and so well constructed that one might walk over it without guessing what was beneath. Here mother and children lived in a precarious freedom; and here, at length, they were caught. The woman, becoming overbold, went out in the daytime to pluck corn and was espied by the overseer who set the dogs upon her. The retreat to which she had fled was found and she and her children were brought back to slavery. They were very wild, the children ungovernable, save when with their mother. At times they would cling fiercely to her and could not be taken away. This was shortly before the close of the war, so that freedom again was soon given them, a freedom not of the swamp, but of the world. What they did with it neither Aunt Kitty nor Uncle Ben nor Isaac Jones could tell. They wandered away, but whether to fresh fields or city streets or again to the woods no one knew.

Bill Pickens left his wood chopping and came out on the road to speak with us. He was a tall, heavy man, with gray beard and bright eyes. We asked him if he could tell us the name of the church that we had lately passed on the road.

"Dat's de Missionary Baptist's," he sid, "an' its a sure enough religious church. At de Missionary Baptist dey has de foot-washing. I 'member in de ole days how one er my marster's slaves wanted to go to dat church. 'You min' your business an' hear de preacher what I sen' you,' marster says. Once a month his preacher 'ud come an' talk ter de colored folk. He'd tell 'em how dey must obey deir marster an' missus an' not steal any chickens. He wouldn't say much moe dan dat. No real preachin'. Den de next mornin' marster ask us, 'didn't none of you go up to de anxious seat?' Us hadn't none of us gone, an' he says, 'You go up next time, or you jes' wait an' see what'll happen.' But you know, miss, de colored people don' go up to be prayed for unless dis is change," tapping his heart. "One Sunday mornin' one er marster's darkeys say to him, 'marster, I want to go to join de church.'

"'What church?' says marster.

"'De Missionary Baptist.'

"'You ain't no business dere.'

"'What I know marster is de Lord callin' me dere.'

"De marster told de overseer to whip him an' he tried to whip it out o' him, but he stood to it, an' at last dey let him go. Dat's a sure enough good church."

"Did you ever get into trouble about your religion?" I asked. He shook all over with laughter as he answered. "I got into trouble 'bout a different matter. My marster wouldn't low us ter make no visits. Us couldn't go nowhere, but I jes' put off an' made my visit. I thought nobody see me, but de marster did, an' he tole de overseer ter whip me. I weren't goin' to be whipt, so I runned away. Den dey set de dogs on me. De dogs is terrible, Miss. When dey's after yer dere ain't nothin' to do but climb a tree or dey tear yer all to pieces. Dey run me down an' took me back. I'se heard of how peoples run away from down yere and gets North, but I don' know. Dey brought me back." He looked up quickly. "I never got whipped for *not working*, never. I allus done my work." And with that he left us to go on with his wood chopping.

Granny is a very old, black woman, with small features for an African, and a mouth that despite the absence of teeth has a pleasant smile. She is small and thin and can still go about and visit with her neighbors. Her cabin, where we sat together, was neat, the large bed with its bright patchwork quilt looking fresh and clean. The people of the vil-

lage, both white and black, speak highly of her, and many know that her story is true.

"I was sold in North Carolina," she said, "away from my chillen. I had four chillen, but dey only left me my little baby. Dat nearly broke my heart. My first marster had been tolerable good, but now de speculators took me an' I was drov' down, jes' like I was part o' a herd o' cattles or mules. Dat was de way dey sold us in dose days. When I reached Alabama a man come along dat wanted to git rid of an ugly darkey, a girl he didn't like, an' de speculator swap me for her. Dat was the way I got sold, me an' my baby.

"Hard times begun den fer I had a cruel marster an' a cruel missus. Marster Ben, deir son, were good, and it used to hurt him to see us 'bused. When de war came Marster Ben went—no, der ole man didn't go—an' he were killed dere. When he died, I cried. Dat's a rhyme ain't it?" she said, laughing. "He were a kind chile. But de oders, oh, dear.

"What did I do? I spun an' cooked, an' waited, an' plowed; dere weren't nothin' I didn't do. An' I'd be so hungry, so hungry, an' I'd know dere wouldn't be nothin' for me to eat. I'd be so hungry I'd jes' cry. Den dey'd whip me, oh, lan's, how dey'd whip me."

"But, granny," I said, looking into her good face, "you weren't mean or wicked. Why did they whip you?"

"Look here, ma'am," she answered. "When you see a snake in de grass, goin' along, he ain't doin' nothing', but you kill him. It was de same as dat wid me. When marster and misses got ready to whip us dey'd whip us. Dey could allus find somethin' dat was wrong. I useder stan' at table an' pass things, an' misses, she'd see somethin' she didn't like an' she'd nod her head. I know'd what dat would mean—one hunnerd lashes. I was scared all de time, all de time. Ole Ben Ward, a nigger down here, he says he wish he was a slave agin, den he'd hab clothes giv' him an' he wouldn't have no food to fin'. But me, I'd raver have freedom an' a piece o' bread a day! I was a dog in dose days, a dog. Nothin' to eat, an' all day long work an' plow, an' allus ole missus.

"What did ole missus look like? Well, I tell yer, honey, she looked like a witch. She'd set dere an' dat look 'ud come into her eyes an' she'd study an' study what to whip me about. I 'member one mornin' she look at me an' she says to marster, 'dat nigger needs a whipping.' He don' answer, but wen' out in de field. Den she sent me to de churnery an' I made de butter nice an' clean an' sweet, an' I put it away. Pretty soon I saw her take it out an' pat it an' pat it. When marster come in to dinner he go to eat de butter, an', ugh, it smell, an' it look full er cows' hairs. Den he got up an' call me outside. Dat's de way my missus get me a whipping."

She looked so old, so apart from the world today, that I felt I might ask her another question.

"Granny," I said, "did your master harm you in another way?" She did not understand at once, then as she gained my meaning, she leaned over and answered, "Did you see dat girl in de house below here? Dat's my chile by him. I had five, but dat de only one livin' now. *I didn't want him*, but I couldn't do nothin'. I uster say 'What do yer want of a woman all cut ter pieces like I is?' But 'twant no use."

"Did you ever try to run away?"

"I was afraid, Miss. Heaps o' folks 'ud tell me to run away, but I was 'fraid I'd be caught by de dogs an' den dey'd about kill me. I saw a boy bro't back once. Dey put a piece o' iron in his mouth dat run back o' his head. He couldn't eat or speak or spit. Den dey works him in de field till he mos' dead. No, I didn't run away, I was too 'fraid. I was 'fraid all de time. An' when I was free'd I was 'fraid, too. Didn't do to say you was free. When de war was over if a nigger say he was free, dey shot him down. I didn't say anythin', but one day I run away here, an' I lived here ever since.

"Do you want ter know how I got back my girl Jane? She was working fer ole missus' daughter an' I were 'fraid ter go back dere, but one day an Irishman come along. He were big wid blue eyes. I got ter talkin' an' I tole him all about Jane. 'I'll get her,' says he; 'you come along,' says he, an' we walked along 'till we come to de place where

Jane worked. When Jane come out he spoke up jest as loud, 'We're after Jane,' he said. Jane went back to get her things, an' when she come out she say her missus want to keep her. I was 'fraid, but de Irishman tell her to come along, an' we all walked off, an' Jane an' I live here ever since. Dat Irishman done it."

"Granny," I said, "how did you bear it all, how did you live?"

"I couldn't 'er done it, dear, widout Master Jesus. He's held me up. I'd' er died long ago widout him."

As I rose to leave I spoke to her of the picture over her mantel, a photograph of Lincoln. She looked at it tenderly.

"I love dat face, Miss. I love it so dat der lady down here, she done gib me der picture. Dose eyes, dey follow me, dey's so kind. I don' know how ter tell you how much I lub dat man dat made us free—*an' all der oders, too, dat helped.* I's very old now. I spects I's most a hunnerd. Dey say when yere a hunnerd years ole yer see de stars fall, and de oder night when I went out I saw all de stars drop from de sky. I was at a wonder when I saw it."

"It's like the plantation song," I said,

"Oh the stars in the elements are falling,
And the moon drips away in the blood."

"Dat's it, dear, dat's it," and she sang a few words until her voice broke. We looked out on the red fields where men guided the mules in the plowing. "I mus' be a hunnerd years ole," she said. "I's seen a heap o' sorrow an' trouble, but it's ober fer me. I t'ank de Lord dat I's free; dat us all, chillen, an' women, an' men, is free.

The story of the woman with the bell was one which I often heard from these old people. They believe it to be true. The woman and her mistress are both dead now, but this is the tale that they tell of them.

There was a woman slave who persisted in running away. Whippings did not frighten her, and so her mistress had her belled. An iron hoop was welded across her waist, another about her neck, and attached to these a long rod went up her back to which, up over her head and beyond her reach, a bell was hung. It rang as she moved, and when she lay down at night the least motion started the clapper. She wore it until she was free.

The mistress had often seen her slave wearing this iron collar and belt, and had heard the clanging torture. One day, years after the war was done, and the bell to many was forgotten, she rode out with her colored coachman. The horses had mounted a hill when the coachman looking around saw that the seat behind him was empty. He drove swiftly back to find his mistress sitting by the roadside. Going up to her he inquired anxiously as to the cause of her leaving the coach. "Stop that bell," she said, querulously, "can't you stop that bell?" He looked about and listened, but there was no sound. Persuading her to return to the carriage, he drove her home, but she continued to complain of the noise in her ears; from that time her mind was permanently unbalanced and day and night she heard the sound of the bell which she had mercilessly forced another to carry thru the years in which she had held her as a slave.

New York City.

Literature

The Irish Parliamentary Party

ALTHO the Home Rule movement goes back to 1873, there are singularly few books of permanent value concerned with its history, with the changes and developments the movement has undergone, with the mission of the Irish Nationalists at Westminster, and with the enormous influence which the Home Rule movement has had in Ireland and on British politics during the last twenty-five years. Until Frank Hugh O'Donnell's two volumes on the *History of the Irish Parliamentary Party** were published, about the only notable contributions to the history of the movement were Barry O'Brien's "Life of Parnell," and Michael Davitt's "Fall of Feudalism in Ireland." Both of these may be described as having been written from the inside; and both of them were written by men who were in sympathy with the movement. O'Donnell was active and prominent in the movement from its inception in 1873 to the general election of 1885. From 1877 to 1885 he was member for Dungarvan. Then, not liking the turn events were taking, and in particular being repelled by the influence that Irish-Americans were having in the movement by reason of their large contributions to the money regarded as necessary to finance it, O'Donnell withdrew; and since 1885 he has not been of the Irish party at Westminster, or otherwise identified with the movement that, since then, has had Parnell, McCarthy and Redmond as leaders.

O'Donnell's history is consequently written much more from the outside than the contributions to Irish political history made by Barry O'Brien and Michael Davitt. There was a place awaiting a good history that should come from outside. It cannot, however, be said that O'Donnell's volumes can be made to fill this place. They lack the accuracy that should characterize historical work. Time and again O'Donnell writes of the disestablishment of the Irish Church as occurring in 1866 instead of 1869. He refers to W. H. Smith as leader of the House of Commons long before he succeeded Randolph Churchill in that capacity in 1887; and in another chapter he writes of John Morley as editor of the *Pall Mall Gazette,* nearly seven years after Morley had left Northumberland Street for the House of Commons and a seat in Gladstone's Cabinet. These errors of facts are not of much importance in themselves; but they do show a lack of accuracy which gives rise to a feeling of doubt when O'Donnell makes as he does so many important statements for which no authority is cited.

Of much more importance than his errors is O'Donnell's estimate of his own importance in the Irish movement and in English politics from 1873 to 1885, and his attitude towards most of the men who were of the movement after Butt was succeeded by Parnell, and after the Irish peasantry became possessed of the Parliamentary franchise in 1885. Admittedly O'Donnell was of importance in the movement and at Westminster from 1873 to 1885. He quotes the Annual Register of this period to bear testimony to some of his achievements during the years in which the Home Rulers were making the movement known the world over by their interruptions in all public affairs that came before the House of Commons. He might have cited recent memoirs of English statesmen to the same end; for there is scarcely a volume of memoirs from that of W. H. Smith, published in 1893, to that of Gathorne Hardy—afterwards Earl of Cranbrook—which came from the press about the same time as O'Donnell's two volumes, in which there is not some mention of the obstruction in Parliamentary business that resulted from the tactics brought into service in the Parliaments of 1874-1880 and 1880-1885 by O'Donnell, Parnell and Biggar.

There is no dispute as to the part O'Donnell had in these tactics of the Home Rule members; and the history of those years could not have been ade-

*A HISTORY OF THE IRISH PARLIAMENTARY PARTY. *By F. Hugh O'Donnell, M.A., Q.C.I.* Two Vols. xv, 508; xi, 494. New York: Longmans, Green & Co. $5.

quately told had O'Donnell failed to describe his own part in the awakening of England and Scotland to the fact that there was a party at Westminster intent on securing the re-establishment of the Irish Parliament. But in his history of the Irish Parliamentary Party there is an obvious and almost pitiable lack of restraint in describing O'Donnell's own importance. His achievements, it seems, are so remarkable that historians still living, who have touched upon them only lightly, or perhaps unfortunately ignored them, will have to do much rewriting now that O'Donnell's own record of his political prowess is available. In the earlier years of the Home Rule movement, Irishmen of the landed aristocracy were associated with it and were of the Irish group in the House of Commons. They dropped away after 1885; and with their abandonment of Home Rule, or at any rate of the Parnell movement, disinterestedness and patriotism, according to O'Donnell, to have ceased to characterize it. For the Irishmen who have been of the Nationalist parties since 1885, O'Donnell has little admiration, and even less for existing political organizations in Ireland, that make it possible at every general election to return eighty-two or eighty-three Nationalists to Westminster. Readers who can appreciate raciness and exuberance, and who are not jarred by an over-pronounced and over-continuous egoism, may enjoy this history of the Irish Parliamentary Party. Students of politics, and in particular those who are hopeful that Ireland may before long achieve Home Rule, will be inclined to wait a little while before they accept as history all there is in O'Donnell's volumes.

Cavanagh: Forest Ranger. By Hamlin Garland. New York: Harper & Brothers. $1.50.

In *Cavanagh: Forest Ranger,* Mr. Hamlin Garland has taken advantage of the current popular interest in the conservation of our national forests, and has still further proved his capacity as a press agent by securing a preface for his book from the pen of the chief actor in the conservation drama, Mr. Gifford Pinchot. Unhappily for the reader of *Cavanagh,* there is more interesting matter in Mr. Pinchot's one-page preface than in all the fifteen chapters of the story whose theatrical clap-trap make one regret that so solid and fine a reputation as the late Chief Forester's should have been used to advertise what is so obviously a hastily written pot-boiler. *Cavanagh* is a travesty on the West—a country which Mr. Garland should understand by this time—unredeemed by so much as a single page of sincere description such as gave a charm to "The Captain of the Gray Horse Troop," for example, which Mr. Garland wrote all of ten years ago, or of the vivid sketches of "Main Traveled Roads," which first interested us in his work and gave us high hopes for his future. The characters in the novel so far as they live at all are such tawdry prigs that if they could be taken seriously they would awaken misgivings in the mind of the most sanguine advocate of the conservation policy.

Greek Lands and Letters. By Francis Greenleaf Allinson, Professor of Classical Philology in Brown University, and Anne C. E. Allinson. Boston: Houghton, Mifflin Co. $2.50.

The authors have done their work well, a work of love. We cannot demand of them that they should have visited every loved spot in Greece, nor can we exact from them a complete picture of Greece. That requires a work of many years. The wonders of the Meteora and the gorge of Tempe may be passed by as outside our sphere. For we are steeped in the classic world. Our frontispiece is a beautiful colored painting of the Propylæa. Hardly less beautiful is the two-page view of the Akropolis with the savant Renan in the foreground. At a dim distance the authors of the book stand at the end and look out on Hymettus. Other illustrations include the remains of the sixth or seventh century temple of Corinth. A map shows the whole of Greece and the coast of Asia Minor, where one can trace the remains of the Seven Churches. Now is presented the most beautiful Hegeso, the dearest figure in the Kerameikos, bringing out her adornments for either life or death. At Kalauria the fugitive Demosthenes was by Antipater's minions brought to bay. His taking off was dra-

matic. Asking that he might pray in the temple, his last request was granted, and coming out after using poison he fell headlong on the temple steps. Our story, which might be prolonged, must be curtailed. Aegina, near by, played a brilliant part in early times, but the fierce rivalry of trade drove it from sea and land. *Vae victis!*

The Old Egyptian Faith. By Edouard Naville. Translated by Colin Campbell. 16mo. Pp. xx, 321. New York: G. P. Putnam's Sons. $1.50.

The present volume belongs to the "Crown Theological Library," and is by one of the most competent scholars of the French school of Egyptology. Of the five chapters the first is introductory, and tells us that the primitive Egyptians were not negroes, but of the Caucasian race, and must have begun to develop a considerable culture before the first dynasty of Menes, whose race was from South Arabia, but had no direct relation to Babylonia. They were worshipers of Horus, and so may be called Horites. The second chapter describes their burial in a sitting posture; also the burial by dismemberment, showing the change to mummification, with the religion related thereto. In the third chapter the development of religion is carried on till we reach that marvelous King Khuenaten, whose monotheism M. Naville credits to a political motive, to overthrow the priests of Thebes. The Book of the Dead gives a subject with quotations to the fourth chapter. The fifth chapter treats of the myths, and the sixth of rites and ceremonies. All this is illustrated with nearly twenty engravings. There have been of late several volumes on Egyptian religion, by Wiedermann, Erman, Budge, Renouf and Petrie, but there is room for this, which, if less analytical, has its special value and gives the views of a most competent scholar on a subject that might fill many volumes without exhausting the subject.

The Undesirable Governess. By F. Marion Crawford. New York: The Macmillan Company. $1.50.

"Governess wanted, to take charge of two girls 14 and 15 respectively; family residing in Yorkshire and London. Must have first-rate degree and references. Charm of manner, symmetry of form and brilliancy of conversation especially not desired, as husband and three grown-up sons much at home. Apply by letter to J. F. P. O. Hanton, Yorks."

Such an advertisement in an evening paper would not only attract the amazed attention of any governess looking for employment, but it would give her a shrewd inkling of the sort of *menage* that stood back of it. A jealous mistress would be the first unpleasant certainty, and four disagreeably susceptible men would be the second. Mr. Crawford knew how to tell a story, and in this lightest of farcical romances he relates the finding and losing of the undesirable governess by Lady Jane Follitt, and the process of her growing desirable, with his unimpaired skill. Motors and airships dash and float thru the pages and drop the characters into untried and even perilous situations and places, one of which is a private madhouse for aristocratic lunatics, as the exigencies of the plot demand their participation. "The God from the machine" may descend from a motor-car or from an aeroplane as well as from a luminous cloud-chariot, in modern fiction, and *The Undesirable Governess* is modern enough to serve as a curtain-raising farce preluding a hair-raising tragedy in any theater of the present day.

Bianca's Daughter. By Justus Miles Forman. New York: Harper & Brothers. $1.50.

Bianca's daughter is described in the first chapter as: "The girl who wanted to live," and in spite of many woes she never becomes "the girl who wants to die." Indeed, she has a fair degree of courage as well as the avidity for happiness characteristic of the very young. The novel is not without dramatic moments but it is an unsmiling and slightly hysteric muse that inspires the author. Bianca's daughter, Vittoria, gives an impression of vitality and vivid charm, as her biographer intended; but her melodramatic father, with his cherished hates and contemptible weakness, does not seem possible from any standpoint, artistic or human sense. He is thoroly repulsive, as Mr. Forman, no doubt, again intended, but the great wrong done him by the unfaithfulness of Bianca, his wife,

is minimized to the point of immorality. The choice of happiness rather than honor, is never a dignified or noble one and its defense should not engage such literary skill as that of Mr. Forman. The loving and suffering daughter may barely be forgiven for saying to her beautiful mother's portrait: "You did right to go!" but the author has not her excuse and we shall not pardon his partisanship.

With the Professor. By Grant Showerman. New York: Henry Holt & Company. $1.50.

A collection of gently discursive essays on the college professor, his habitat and folk-ways, has an interest quite apart from any philosophy it may contain. Professor Showerman writes from the chair of the Latin language and a predilection for classical learning is to be expected: but his kindly spirit does not lend itself readily to polemics, and the essays are so genial and judicious, so sweet in temper and so sane in tone, so courteous in presentation, that the most belligerent of utilitarians must confess their charm. He manfully defends the humanities fallen from their high estate in an evil age sold to the "practical," but he argues without heat or arrogance; in fact, his tone is wistful as tho he, too, were seeking what are to be the real humanities in coming education.

A Documentary History of American Industrial Society. Edited by John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner, and John B. Andrews. Volumes iii and iv, Labor Conspiracy Cases, 1806-1842. Edited by John R. Commons and Eugene A. Gilmore. Cleveland: The Arthur H. Clark Company. $5 each.

The real dominance of the factory system, says Professor Commons, in his introduction to these two volumes, is in the period since 1880. Due chiefly to the extension of markets thru transportation changes, and to improvements in process thru invention, we have passed out of the period in which the workman had an interest in the tools he used or the commodity that he made. He now owns only his labor; the whole trade union movement records his attempt to secure a price for his one possession. In the history of that movement, no idea is of greater consequence than the right of workmen to combine—a right without which there could be no collective bargaining. The documents which illustrate the growth of this idea are printed here. They are the records of those cases in which workmen were prosecuted for conspiracy under the common law doctrine that any co-operation to fix a price or to maintain a wage is unlawful. The cases have been little known to students of either economics or law, and their collection here has been attended with much labor and research. They reveal the slow development of public opinion toward the admission that the law of conspiracy ought not to be applied to labor combinations. They relate principally to combinations among the shoemakers, since unions appeared in their trade earlier than elsewhere. But they are suggestive as to the whole range of industrial thought and aspiration in the half century in which labor was finding itself. The next economic history of the United States can be better written because of these documents.

Consciousness. By Henry Rutgers Marshall. New York: The Macmillan Company. Pp. xv, 685. $4.

Those who have read Mr. Marshall's "Instinct and Reason" will hail with satisfaction the appearance of his new volume on consciousness, which furnishes a better and more complete groundwork for his system of philosophy than was contained in his earlier volume. Indeed, like many another philosopher, Mr. Marshall may be said to have worked backwards, and to have reached the foundations after having finished the superstructure. It may be that his work as an architect has taught him that this is the true method of procedure, for what architect would plan a foundation unless he first knew the size, weight and nature of the edifice that was to rest upon it? It cannot be said of *Consciousness* that it is exactly easy reading. The argumentative form, in which much of it is cast, requires close and attentive following. The theories set out and the logical reasoning by which they are supported are, however, well worth the trouble, and there is something very fascinating in the boldness and completeness of Mr. Mar-

shall's system. Consciousness of the humblest amœba that responds to a stimulus, of vegetable life that adapts itself to its environment, and even of what we are accustomed to call unorganized matter, all have their place in Mr. Marshall's scheme; while animal consciousness and human consciousness in all its varied manifestations—subliminal and multiple selves, dream life, hypnotic and other trance conditions as well as social consciousness, and a world, or even a universal consciousness, all slip into place with a readiness that suggests that a theory which offers an explanation of so much deserves at least most careful and serious attention.

Europe's Optical Delusion. By Norman Angell. London: Simpkin, Hamilton, Kent & Co.

American Addresses at the Second Hague Peace Conference. Edited by James Brown Scott. Boston: Ginn & Co. $1.50.

The Great Design of Henry IV. Edited by Edwin D. Mead. Boston: Ginn & Co. 50 cents.

These three latest books on phases of the Peace movement will be of interest to most peace workers. Mr. Angell's little red volume has already attracted an extraordinary amount of attention in England and Germany. It presents with much clearness and cleverness an argument hitherto little used by peace advocates. It attempts to prove—and we think with success—that in a war between two world powers the victor suffers about as much as the vanquished thru the collapse of securities and the destruction of markets, and the people of both nations are inevitably the worse off. Mr. Mead's volume on the *Great Design of Henry IV,* the first great scheme in history to federate the world, will be especially welcomed, as it presents in concrete form the text of the "Great Design," taken from the last volume of the Duke of Sully's "Memoirs." An excellent and critical introduction by the editor precedes the story of the Great Design, while the remarkable plea of Edward Everett Hale for the creation of "The United States of Europe" follows. In Professor Scott's volume we have at last the full text of the speeches of three of the American delegates at the Second Hague Conference—Joseph H. Choate, Horace Porter and James Brown Scott—delivered in support of the great propositions that came before the conference, namely, the immunity from capture of private property at sea, the limitation of force in the collection of contract debts, arbitration, the prize court and the judicial arbitration court. Professor Scott deserves the thanks of all peace workers and students of the Second Hague Conference for collecting these addresses. They shed much new light on the momentous problems that came before the world at that memorable gathering. Why the speeches of the other American delegates were omitted, however, is not quite clear. One's admiration is kindled anew in perusing these speeches at the brilliance, ability and profundity of the American delegates. Mr. Choate's lofty eloquence and ripe statesmanship were never better employed than in these pleas, while the keen lucidity of General Porter, and the wealth of scholarship of Professor Scott are marvels of parliamentary dialectics. All three books should be on the peace shelves of our more important libraries.

Songs of Cheer. By John Kendrick Bangs. Boston: Sherman, French & Co. $1.

The rapidly growing literature of optimistic suggestion is enriched by this volume of cheerful verse by one of the most cheerful of our humorists. The lines that take our fancy particularly are the following, but there are plenty of others quite as good:

A PHILOSOPHER.

To take things as they be—
That's my philosophy.
No use to holler, mope, or cuss—
If they was changed they might be wuss.

If rain is pourin' down,
An' lightnin's buzzin' roun',
I ain't a-fearin' we'll be hit,
But grin thet I ain't out in it.

If I got deep in debt—
It hasn't happened yet—
And owed a man two dollars, Gee!
Why I'd be glad it wasn't three!

If some one come along,
And tried to do me wrong,
Why I should sort of take a whim
To thank the Lord I wasn't him.

I never seen a night
So dark there wasn't light
Somewheres about if I took care
To strike a match and find out where.

Literary Notes

....It is announced that beginning with the July issue *The Forum* is to be published by Mitchell Kennerley, tho it will be continued to be owned by the Forum Publishing Company, of which Mr. Isaac L. Rice has been the president since its formation twenty-four years ago.

....The Puritan Press, Oak Park, Ill., publishes as a compact pocket volume, an admirable *Congregational Manual* which tells a minister or a layman how to conduct any ecclesiastical business connected with the Church, even including parliamentary law. It is a marvel of condensation, full of facts and concludes with a compendium of forms, statements of doctrine and drafts of letters missive. It will take the place of manuals by Drs. Dexter, Quint, Ross and others, and we commend it to members of churches Congregationally governed, of various denominations, and it would be useful to others.

....A eulogy on Edward VII is contributed to the London *Standard* by Rudyard Kipling. He uses the irregular anapestic pentameter which has of late been his favorite medium of political advice and reproof. The closing verses, quoted below, give a pretty complete definition of the constitutional functions of a British sovereign:

And God poured him an exquisite wine that was daily renewed to him,
In the clear welling love of his peoples that daily accrued to him.
Honor and service we gave him, rejoicingly, fearless,
Faith absolute, trust beyond speech and a friendship as peerless.
And since he was master and servant in all that we asked him
We leaned hard on his wisdom in all things, knowing not how we tasked him.
For on him each new day laid command, every tyrannous hour,
To confront or confirm or make smooth some dread issue of power;
To deliver true judgment aright, at the instant, unaided,
In the strict level ultimate phrase that allowed or dissuaded;
To forsee, to allay, to avert from us perils unnumbered;
To stand guard on our gates, when he guessed that our watchmen had slumbered;
To win time, to turn hate, to woo folly to service and schooling
His strength to the use of his nations, to rule as not ruling:
These were the works of our king. Earth's peace is the proof of them.
God gave him great works to fulfil, and to us the behoof of them.
We accepted his toil as our right, none spared, none excused him;
When he was bowed by his burden, his rest was refused him;
We troubled his age with our weakness, the blacker the shame to us;
He heard that his people had need of him, straight way he came to us;
As he received, so he gave, nothing grudged, naught denying,
Not even the last gasp of his breath, when he strove for us, dying.
For our sakes, without question, he put from him all that he cherished.
Simply as any that serve him, he served, and he perished.
All that kings covet was his, and he flung it aside for us.
Simply as any that died in his service, he died for us.

Pebbles

THOUGH T. R. pleads for war to cease
With all its roar and rattle
He seems to say, "I love you, peace,
But, oh, you fine sham battle."
—*Christian Science Monitor.*

DECLARING that the ancient Greeks were never bald because they didn't wear hats, the men students of the Ohio Wesleyan University at Delaware, Ohio, made a bonfire of their hats, and danced around it. The joke in this celebration is on the fathers who have to buy new hats. Ha, ha, but it is funny to be a father.—*Atchison Globe.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

A Time to Mourn

WHEN King Edward so suddenly died, all Britain was at first stunned, stupefied by the unexpected blow. It was a composite feeling of grief and dread; of grief because the people that dearly love a lord reverence a king; of dread because in the political crisis both parties depended on the King's experience and wisdom to bring relief. So a few days were needed that they might recover themselves, accept the loss, allow their dread to subside, and settle their souls into the attitude of simple sorrow until the day of interment should come, after which they should turn to their new King, be content with the forms of decent and conventional mourning, open their shops, pursue their business, and proceed to amend their unwritten Constitution, which no Supreme Court can interpret, and maintain, but which any Parliament can at any time amend.

Friday last, the day of burial, was little other than an apotheosis. Ancient kings of various nations were worshiped when they died. Millions of Englishmen gathered in the streets to do their last honors to his memory. King George and the Emperor William knelt before the coffin and prayed. Was it for the repose of his soul? Hardly, tho it looks like it, for the new King must take oath that he rejects the superstition of Purgatory. More likely the two royalties, like the people, were simply doing an act of worshipful reverence toward one whom they had looked upon as above human judgment, more than man, if less than God.

Why is it that men thus reverence a king? He is flesh and blood like us, has parts and members like ourselves. Edward was no saint. He had his faults, and the people knew them fairly well; but strangely enough, the faults of princes are condoned, as if what were a fault in us were no fault in them. They are treated as something apart from and above the ordinary canons of judgment. They are of other dust from us. To their virtues we are very kind, to their failings very blind. And even so it is with poets and statesmen and soldiers of great eminence. We put a halo about them; we write biographies of them which might be memoirs of pious saints. Because Poe was a poet and Wellington conquered Napoleon at Waterloo there goes into history of them *nil nisi bonum*.

So kindly is human nature of those who have in some distinguished manner served them. And Edward served his generation. He took the duties of a king very seriously and performed them well. Doubtless much that is said of him is magnified in the telling, but why not? That again is human nature. We will not blame Kipling for usurping the chair of the Poet Laureate with the extravagancies of his lamentation, and his confession of the burdens which the people so thoughtlessly laid upon their sick King. It is not melodrama; he feels and believes it all in the first excess of loyal pain, while the King lies in state; but now the funeral honors are paid, the funeral flowers and verse have been laid on the grave, and the sane British people will assuage their grief, will remember that they rule and not their King, and they will return to their marketings and their making over of their rickety old political Constitution, and they will have a better king than ever, because they are a better people

and so have better real rulers—will have more rights, more liberty, will toss more fossilized medievalisms into the scrap heap, with hereditary power reduced, and the substance of royalty more dissolved into a mist, a memory and a vanishing wraith.

Hartford and Mohonk

Following the New England Arbitration and Peace Congress held two weeks ago at Hartford and New Britain, Conn., came last week the sixteenth annual Lake Mohonk Conference on International Arbitration. The Hartford and New Britain Congress, tho officered and managed exclusively by New England people, was national in spirit like the Philadelphia Conference of two years ago. These conferences together with the New York Conference of 1907, and the Chicago Conference of 1909 indicated that from now on there will be in all probability national conferences held in different parts of the country every year. Thus the United States will have with England, France, and Italy national annual peace conferences in addition to the various local celebrations of the 500 or more peace societies scattered thruout the world.

The one unique feature of the New England Conference was the pageant of the school children and the various nationalities at New Britain, in celebration of the centenary of the birth of Elihu Burritt, whose famous motto "Above all nations is Humanity," floated on the banner, under which the procession marched. This feature of the celebration was reported fully in our last week's issue by a specially illustrated article. We have only space here to note the general excellence of the speeches at the various sessions of the conference, especially the far-visioned address on the bearing of the two Hague conferences already held on the third Hague Conference of 1915 by Edwin D. Mead, of Boston, and the eulogy at the grave of Burritt by James Brown Scott, of Washington. The platform was the best in style, substance, and statesmanship we remember ever to have read, emanating from a peace conference. It not only recognized that international organization—Tennyson's dream of the Federation of the World—is the prerequisite for universal peace, but it actually pointed out the fact that we now already have the beginnings of the international legislative, judicial and executive departments of the "United Nations." The conference even had the courage to indorse the Bartholdt bil now before Congress calling for the appointment of a commission to consider "the most important means of advancing the co-operation of the nations toward international organization, in order that our recommendations to the nations and to the Third Hague Conference may be well considered and far-reaching."

If the platform of the Mohonk Conference contented itself too largely with indorsing propositions already initiated by Knox, Taft, and Roosevelt, still in the distinction of delegates and the importance of papers read, it far surpassed its New England predecessor. Never has the argument for vast armaments as peace preservers been more ably refuted than by President Butler in his inaugural address. "Civilized men it appears," said he, "are to be starved or shot into submission." And Mr. William Jennings Bryan's eloquence never appeared to better advantage than when he inveighed against this great navy policy which would "scare" us into peace. Indeed, it was the well-nigh universal opinion of the delegates that Mr. Bryan's interpretation of what the Prince of Peace taught about war was in stricter accord with the plain teaching of the Gospel than a distinguished clergyman's Rooseveltian apology for force.

The Canadian Minister of Labor, the Hon. Mackenzie King, also received great applause when he suggested that the forthcoming centenary of peace between Canada and the United States that takes place in 1914, should be officially celebrated by the two governments by the erection of a great bridge or monument at Niagara Falls. The Rush-Bagot treaty of 1817 between the United States and Canada has made it unnecessary to fortify the boundary line of over 3,000 miles ever since—an example to all the world of the priceless advantages of an agreement for disarmament.

By far the most important event of the conference, however, was the official announcement by Secretary Knox thru James Brown Scott, that the great Judicial Arbitration Court or Court of Arbitral Justice is an accomplished fact and is likely to be in actual existence, if not in session, within two years. Those who have followed our discussion of the creation and composition of this court in our issues of four weeks ago and last week will not need to be told that this is perhaps the greatest step yet made in the movement for the substitution of law for war. It is said that England, Germany, France, Russia, Austria-Hungary, and Italy have already accepted the proposal and as soon as Japan is heard from—which is expected any day—all the great world powers will have entered the court. Thus, if the eight great world powers agree to disagree in a court of law instead of on the field of battle, is not the reign of universal peace well-nigh inaugurated?

Mr. Albert K. Smiley, who has called these great conferences together for the past sixteen years, can now feel that his labors have not been in vain. Without the United States this proposition for a permanent judicial court would not now be before the world; without the supporting sentiment behind them, our State Department and President would never have taken the initiative in proposing it, and without Mr. Smiley's conferences there would not have been the sentiment. Mr. Smiley is now eighty-two years old. He should be crowned with the Nobel Peace prize. The younger men can wait.

The Democratic Split in the South

THE period of a generation and a half has passed since the Civil War. The soldiers of the blue and the gray linger on the limits of life. It is time that the South as well as the North should look to the political future, and no longer live on its memories of the past. Not a little has been said as to the wisdom of building up a Republican party in the South, and that such a party will be built up we do not doubt, and out of the votes of the agricultural whites; but hardly, as at present appears, from the increased vote of colored citizens admitted to the polls. At present it looks as if negro voters in the South were looking to the Democratic party, strange as it may seem, and impossible as it will appear to the political leaders.

Let us take Tennessee as an example. About all that those in the North have known of Governor Patterson is that he was the whisky candidate and that he has been emptying the prisons by a thousand pardons. What is not generally known is that the negroes, even the most intelligent of them, almost in a mass voted for him. What was the reason?

The fair treatment of the negroes is at last coming to be a question that interests white Democrats; and in Tennessee as in other States there is a liberal and an illiberal division in the party, of which Governor Patterson represented the liberals and Mr. Carmack the illiberals. These terms have to do solely with their relation to negro rights, and not to prohibition. Meanwhile there has grown up in the Republican party the effort to build up everywhere a "Lily White" Republican party, which has no use for the negro, and which has removed them from public office. In these conditions the younger intelligent negroes, finding themselves without recognition in their own party, and exploited by the whites to obtain office, began to wonder how best to subserve the interests of their race, and are in large numbers pitching their tents with those who are willing and able to give them a fair deal to the extent of protecting them in the matters of common life. This does not mean office, but protection in their common rights. The Democrats being split into two wings, a liberal and an illiberal, they give their help to the former.

When Mr. Patterson beat Mr. Carmack for the nomination, the illiberals sharpened their swords and spears and charged the liberals with fraternizing with negroes; and as a master stroke of folly, the Republican candidate, in his eagerness to get Democratic votes, charged Mr. Patterson with fellowshiping low-down negroes, who loved their bottles better than their wives. Be as-

sured that the liberal Democrats, who badly needed votes just then, were not slow to spread this sweet morsel of information wherever there were negro voters, and as a result they flocked to the Patterson standard, not, we are assured on the best authority, because they wanted free whisky, but because they wanted to be treated as men; for practically every intelligent negro is the bitter foe of the saloon. But protection to life and the progress of the race in Tennessee did not seem to concern those who were leaders in prohibition.

We have spoken of protection of common life, and we may illustrate what we mean by Governor Patterson's administration. There is a park in Nashville owned and controlled by negroes, because, while allowed to pass thru the public parks, any attempt on their part to use them as pleasure grounds would cause the utmost friction. Now, this negro park is about half a mile from a cemetery for white people, and some white residents objected to so many negroes alighting near by to go to the park; and they managed to get a law thru the Legislature forbidding any park within a mile of any cemetery. The sole purpose was to close this park, but Governor Patterson vetoed it. Take another illustrati n: Under illiberal Democratic rule, schools for higher learning were maintained at public expense solely for white youth, but under this administration for the first time a normal school has been established for colored teachers. In defense of Governor Patterson's pardons it is alleged that previous administrations pardoned only white prisoners, while Governor Patterson has pardoned many negroes on his own initiative whom on investigation he adjudged weak and helpless. It is not strange that the negroes vote for a Democratic Governor, and we cannot blame them if they leave their old party, which does nothing to help them.

This Democratic division is going on in other States. In Georgia it is Governor Brown against the hostile Hoke Smith; and in Mississippi it is Senator Percy against Governor Vardaman. The illiberal Democratic wing, altho sometimes defeated, is yet very strong, and headed by the Tillmans and Jeff Davises, is as a rule in the saddle; but the liberal wing is growing stronger and stronger. In Maryland they have defeated a law to disfranchise negroes. The negro, in the meantime, removed from political preferment, and with a vote for which none are publicly bidding, but which all are willing to accept, finds himself much in the position of a homeless waif on a cold, stormy night. He cannot rest outside, and he looks from place to place for a shelter. On finding an open door he enters and offers to render such little service as he is able to give.

Health in Country Life

THE usual rule is to think that health is almost a necessary concomitant of country life. It is supposed that fresh air, simple food, exercise in the open and intimate touch with Mother Nature will assure good health better than any other possible combination of circumstances. We are preaching the doctrine of back to the country and more and more of our people are spending a considerable portion of the year outside of the cities at least if not actually in the country. The spring exodus is now upon us in the course of the present month, so that certain dangers of country life may very appropriately be pointed out at the present time, and besides the large number of our readers who dwell in the country may well be reminded of the necessity for diligent care with regard to special sanitary regulations that represent the best possible safeguard against certain risks more or less intimately connected with country life.

The most important feature of sanitary regulation in the country is undoubtedly that of the disposal of sewage. Here lies the danger of the communication of disease, and unless great care is exercised there are many more risks in country life than in city life. It must not be forgotten for instance that in spite of the large death rate from typhoid fever in certain cities typhoid is a rural and not an urban disease. It spreads practically always thru drinking water. It is true that in recent years the sporadic epidemics in our cities can usually be traced to milk. The ultimate reason for these, however, is that the milk containers, pans and pails

on the farms are washed in water flowing thru the dairies which are contaminated by the excreta from cases of typhoid fever or are handled by those who have been in contact with typhoid patients. Of course, it implies gross negligence for anything like this to happen and risk the spread of the sewer disease with its many fatalities. Literally, whenever a patient dies of typhoid fever some one ought to be hanged. Somewhere between a typhoid fever case and the drinking water of healthy individuals there has been very serious and what may well be called criminal negligence. Of course, occasionally the handling of milk by those in whose houses typhoid fever occurs is the cause of the bacillus getting into the milk and being distributed for long distances. This is, however, more criminally negligent than in the cases where water is the medium of communication.

The rule for people who have taken up country life either as pioneers or permanent residents or for their vacations is that they must know absolutely the source of their drinking water and must assure themselves that there is no possibility of its being contaminated by excreta. In many country places this is extremely difficult. For instance, whenever there are shallow wells as the source of the drinking water (that is, non-artesian wells less than fifty or sixty feet in depth) it is quite impossible to be absolutely sure that sewage does not get into the underground streams which supply the wells. Even a shallow cesspool eight or ten feet deep will sometimes seep thru long distances and seriously vitiate currents of well water at a considerable distance away. This has been proved to be the case over and over again. It is particularly likely to happen if much water is mixt with the sewage. In the old times when farmhouses and country houses were not provided with bathtubs and did not have their laundry tubs connected with the sewer pit the excreta did not penetrate so deeply nor seep so far. Now all this has been changed and while bathing facilities are eminently hygienic measures and their provision a consummation devoutly to be wished, they add to the danger of the diffusion of sewage material thru the soil.

There is but one absolutely sure precaution that will serve as a prophylactic against this danger. That is the boiling of the water that comes from a water supply at all suspected. In this regard it must not be forgotten that not infrequently people living in a particular neighborhood may have acquired a certain immunity to typhoid fever or to the bacilli of it in their water supply. Some of them have had the disease years before, only an occasional person living in the otherwise healthy country conditions may prove to be susceptible. The number of cases of typhoid fever may not be a good index then of the danger from it for a newcomer in a particular locality. City people with less resistive vitality who come out for the summer and whose digestive tract is not used to disposing of somewhat contaminated water may suffer where other people remain free from the disease. City physicians have patients come back from their vacations with typhoid fever and often find it extremely difficult to explain the origin of the cases except on some such theory as this, and the theory is by no means so far fetched as it might seem to non-medical minds, for immunity is a very special individual quality.

Of course, other sources of water as, for instance, small springs, may prove just as dangerous unless one knows exactly where they come from and thru what neighborhoods they pass. Here once more the only absolute safeguard is boiling the water. Some people seem to fear because boiled water lacks some of the taste that we are accustomed to in water ordinarily that it may also be lacking in some quality necessary for health. There is no reason for this fear, however. We have grown accustomed to the taste of certain organic material in water because as a rule rain that falls and passes over the ground or seeps thru it dissolves these harmless organic materials. They exist only in traces, however, and while enough to produce a particular flavor have no effect that we know of on the human constitution. Rain water, especially such as has fallen after some hours of rain has cleared the atmosphere of dust, tastes like distilled water or like boiled water. One reason for the flatness in the taste of boiled water is the

absence of air in it. If the water is allowed to stand for a time, however, with a cloth cover over it it will absorb air and regain something of its more pleasant taste from the oxygen of the air.

As we have hinted, after water the most important source of danger in the country as in the city is from milk. One should know something about the sources of the family milk supply and the conditions under which it is gathered and distributed. Uncooked vegetables represent the other source of danger, but they are seldom responsible for infectious disease. There seems to be no doubt that they do gather in the dust which comes to them certain microbes that are the cause of some of the colicky indigestions that so often follow the eating of uncooked vegetables during the hotter, dryer, dustier months. Pickles and cucumbers probably owe more of their banefulness to some people to the microbes that gather on them than to any substances within them. At least certain recent Russian investigations would seem to indicate that. In a word the danger in country life is in the food and drink. With a little care for cleanliness it can be avoided and then the country becomes the ideally healthy locality that it is supposed to be by tradition.

A Fine Show of Kings

If kings and kinglets are enough like the human race in general to think and ponder—and some of them are—there must have been sober reflections among the monarchs that rode behind Edward VII's remains.

Nine kings in line: as assemblages of kings go it was a likely lot of kings. Two or three of them were known to the world as men of force and influence. The others were gentlemen, well brought up, who have never made any trouble to speak of; and with the help of official programs and insignia of identification they were recognized by the curious multitudes that had never before heard of them, and will have forgotten them before the days of ceremonial mourning are over.

It was their day and their occasion. They were the show; and as a show they were *au fait*. In fact, as the American traveler in civilian garb who brought up the rear is supposed to have ejaculated, they were a "perfectly bully" show.

But therein lay their grief. Sadder than the death of their finest was the passing of their royal substance. In all the mighty throng that filled the streets and open places there was none so poor as *not* to do them reverence! As the world now and then observes Twelfth Night, or marches behind the banners of Knights Templar, so it gazed on the glory of kings, and for the hour gave itself up to the swelling emotions of solemn pomp and ancient ceremony—knowing that all was show!

A hundred years ago—so strange as it may seem—the world yet stood in awe of kings. It feared the king, and in a measure hated him, for the glare of revolutionary fires had not faded from eyes that had beheld their fury. That a century would see the dethronement of kings, great and small was the belief alike of publicists who desired and those who deplored such consummation. The most reckless imagination did not picture a time when the world would cherish its kings as it cherishes castles and abbeys; old armor, old silver and laces; as treasures come down from a world that is no more, and that can never again exist.

Alas and alack! The king is dead! Long live the king!

Mr. Taft and the Tariff

In a "statement by President Taft," published as an interview in *McClure's Magazine*, the President explains that in the tariff revision he did not secure all the reductions he desired, because combinations of sectional interests stood in the way. He finally signed the bill, he says, not because it was a perfect tariff, but because it was the best he could get, and because he did not believe himself justified in holding up the business of the country for months longer by a veto, on the chance of getting a better one:

"It was perfectly clear to me, at the time, that I could achieve a temporary personal popularity by vetoing this tariff bill. It was just as clear that if I did so I would cause such a split with my party in Congress that the entire program of progressive legislation, to which I had dedicated the whole strength of my Administration, would be put in jeopardy.

As it was, I kept the friendship and co-operation of the conservative Republicans in Congress—the only section where opposition might have been expected to develop—for my general program of legislation; and, at the same time, I secured in the tariff bill itself, the means of bringing about what I stand for, and what I believe this country wants, a fair protective tariff, based, not on guesswork, but on actual evidence."

That is to say, he secured provision for the tariff board, which is to ascertain the costs of production at home and abroad. For the investigation which he desires this board to make he has asked Congress to appropriate $250,000:

"A thoro investigation of this kind will take between two and three years. It is not unlikely that, in the light of accurate statistics, we may find that certain schedules in our tariff are too high. If we do, I shall at that time not hesitate immediately to recommend their revision. This is my idea of the proper function of a tariff board. Others have favored another plan. Senators Beveridge and La Follette have urged the choice of a board which would itself prepare and present a schedule of rates to Congress. I do not believe this plan to be feasible—my chief objection being that it would not result in legislation. The House of Representatives is sensitive of its right to originate revenue measures, and resents the delegation of this to bodies outside itself. As a matter of fact, this very plan of a tariff board was tried in 1882, and failed utterly. I believe that the work of a tariff board should be to secure and to present evidence, not to frame a tariff. With this evidence before it, Congress will act fairly and wisely; and the United States will have, under this method, a tariff established on a thoroly scientific basis—as it should have had a quarter of a century ago."

The President's estimate, here exprest, of the new tariff is less favorable than that which he has given in certain public addresses. It is clear that the bill's defects were so manifest, in his opinion, that he considered the expediency of using his veto power. If he believed that the revision was not a just one, his veto should have been attached to it. He sought to prevent a split with his party. He now has the defective bill and also a split. It is a split that menaces the success of his party and of his Administration. It is due primarily to his friendly support of those who controlled the tariff revision, to his approval of the bill by means of his signature, and to his praise of it on various occasions since it became a law. A strong and convincing veto message would have helped him, his Administration and the Republican party. We do not think it would have prevented the enactment of the other bills on his program. They are not in a highly promising condition at the present time, altho the conservative element had its way, and his support, with respect to the tariff.

His plan for the work of the Tariff Board is an excellent one, but he has not yet obtained the needed appropriation. He knows, of course, that the conservative Republicans, whose friendship and co-operation he kept, do not want a thoro investigation and an authoritative report concerning production costs here and abroad. He should insist now upon the support of Congress for this project, both because justice requires such an inquiry and also for the reason that he can help his Administration and his party by making it. But if the money and the explicit authority for such an investigation shall be granted at the present session, it will not be necessary to wait two or three years for a report. Competent persons can ascertain the production costs, with respect to a few of the schedules which are believed to be most unjust, in less than one year.

❧

A Question of Casuistry

The action of Stenographer Kerby in disclosing the facts about the draft written by Mr. Lawler as if in President Taft's name brings out an interesting question of casuistry. It is beyond question that the relation of a stenographer to his employer is confidential. It would be very extraordinary circumstances that would justify a stenographer in breaking that confidence. His position is much like that of a lawyer to his client, a physician to his patient, or a priest to a penitent. And yet that confidence may sometimes be broken at the command of a court of law. But it is not because he answered questions before the Congressional committee that Mr. Kerby is blamed, but because he disclosed to Secretary Ballinger's foes what was done in Secretary Ballinger's office, and did it with the expectation that it would be of use to them; and that then, at their advice, when he was not likely to be called as a witness, he published the facts in such a way as to

make it sure that he would be summoned to the stand. On the face of it, thus far, that was treachery, just as Secretary Ballinger characterized it. Yet there is another side. Secretary Ballinger did not hire Stenographer Kerby. He does not pay him his wages. He was hired and paid by the United States Government; that is, by the people. He says that his act was not one of treachery to Secreatry Ballinger, but of loyalty to the people who had a right to know what Secretary Ballinger was sedulously concealing. There is some force in that; but, on the whole, it seems to us that he was to blame, that the people had engaged him thru Secretary Ballinger, and that his act was disloyal, and yet not so utterly and unquestionably treacherous as the Secretary regards it. It is not quite clear that it was pure loyalty to the people that dictated his disloyalty to his immediate employer; there appears to be in it a spice of ill will, if not malice.

The Bequest to Princeton

The gift by the will of Isaac C. Wyman of an indefinite number of millions to Princeton University will do more than one great thing for that institution. It will make it a real university, something more than an undergraduate college. It will establish what may be the most amply endowed postgraduate department in the United States. It will in some way settle the feud within the faculty, the trustees, and among the alumni as to the policy of the university. There will be no question as to the acceptance of the bequest, and the consequent establishment of a non-vocational graduate school very nearly along the lines of Dean West's developed plan; for that is particularly indicated in the will of Mr. Wyman. But will the democratic spirit of the university be thereby imperiled, as was feared by President Wilson when the acceptance of Mr. Proctor's gift was under discussion? That question will hardly be raised again; but we may be sure that it will be in the minds of those who control that no aristocracy of scholarship must be fostered, if, indeed, such a thing is possible. Scholarship is essentially democratic. It is in the reach of the humblest. No titled degrees of scholastic nobility, nor any seclusion of buildings ten minutes away, nor imposing processions of hoods and gowns, can separate the graduate from the great people.

A Royal Prayer

With the accession of a new King of England and the religious rites that have accompanied the burial of King Edward and the coronation of George V, we may recall the prayer with which Nebuchadnezzar, King of Babylon, opened the inscription which recounts his service of his divinity in the erection of temples for worship:

"O Eternal Ruler, Lord of the Universe, grant the name of the King whom thou lovest, whose royal name thou hast proclaimed, may flourish as seems good to thee! Lead him in the right way! I am the Prince that obeys thee, the creature of thy hand. Thou hast created me and hast entrusted to me the sovereignty over mankind. According to thy mercy, O Lord, which thou bestowest upon all, give me the love of thy supreme rule! In my heart implant the fear of thy divinity! Grant me whatsoever may seem good before thee, for it is thou that dost control my life."

This prayer is worthy to find a place in modern liturgies.

Birds' Nests

The value of birds about a country home can hardly be overestimated. They count into the economies of country living more and more, as the battle with insects grows fervid. George E. Hoxie, of Westerly, R. I., believes that any farmer will find it advantageous to take a great deal of pains, and some expense, to cultivate bird acquaintance. He has on his homestead over twenty bird houses, and last year every one of these was occupied with either bluebirds or swallows. Around his buildings there were also four nests of barn swallows and seven nests of eave swallows, these raising altogether about two hundred young birds. Beside these there were, within 500 feet of his house, ten robin nests, one of oriole, one of waxwing, one house wren, two chipping birds, two ground sparrows and one king bird—totaling over three hundred insect eaters and sweet singers, belonging to Mr. Hoxie's family alone. He reports that, in his belief, these birds paid a fine sum into his annual income; with all the rest,

giving him a big yield of apples last year, when apples were a rarity. The special foe to the apple crop in 1909 was aphidæ or lice, and these were a legitimate prey for a large number of birds. In fact, almost nothing else could get at them, unless it were bees and hornets. A recent writer says that he would feed a whole bird colony just for the music, "even if they did not help his crops"; adding that, after all, the nicest thing about the whole matter is that the birds themselves are happy. It would be a good thing this spring if every country home could plant out a mountain ash tree, or a wild cherry, or a hedge of Tartarian honeysuckle, just for bird food. It is no small thing to have a choir of red-winged blackbirds or wood thrush singing all summer in your trees for nothing but board and lodging.

Schoolboy Foresters

Making foresters of our schoolboys is a short cut to something better than preservation of our forests. It includes the expansion of our State fisheries, and the preservation of the game that counts heavily into the food reserves of the people. In the early years of our country fish constituted a most important part of diet, and the discovery of the Newfoundland and Labrador fisheries had a most important economic effect on the whole of Europe. The early colonists found fish enough in the streams and wild fruit enough in the fields, including berries, to supply them with nearly all their food. The almost entire elimination of this food supply was a national disaster. What we want now is not only to increase the tillable power of our soil, but to work our way back toward a natural supply of food. It may surprise our readers to know that the production of oysters around New York and Long Island has, in a very few years, increased from one million to twelve millions. The State of New York alone, last year, propagated and placed in the waters of the State over five hundred millions of fish. Twenty-five years ago there was not a forestry school in the United States, and there was but one scientific forester in the country; today the Government is sending out trained foresters, not only for the States to employ, but for corporations and private parties. Now that food prices are rising so rapidly, the people must consider the restocking of their streams as vitally important; equally important the prevention of the drying up of such streams. It is all one question, the preservation of our forests, the restocking of our streams, and feeding the people. Mr. Whipple, State Forester of New York State, mentions among other benefits furnishing of lumber, preserving water supply, cooling the temperature in summer, moderating it in winter, supplying pure air by exhaling oxygen and ozone, supplying windbreaks affecting local rainstorms, forming healthful parks for the people, and allowing the restocking of streams, and thereby an enormous increase of food.

With the death of Dr. H. H. Jessup only one is left, Dr. Bliss, of the older missionaries of the American Board in Syria, of the period before that mission was transferred to the Presbyterians. Yet even Dr. Jessup and Dr. Post and Dr. Bliss and Dr. Van Dyck and Dr. Thompson, his associate in the great task of translating the Bible into Arabic, and Dr. Calhoun were not the veritable pioneers; they were Mr. Bird and Dr. Goodell. Dr. Jessup was a missionary in Syria for fifty-three years and was active in the founding of the Syrian Protestant College in Beirut, of which Dr. Bliss was president until succeeded by his son. He was a strong man, positive in his beliefs, and greatly respected by the people. His death follows not long after that of his honored associate, Dr. Post, the famous missionary surgeon, but the college remains as their permanent monument and a mighty influence thruout all the Arabic-speaking nearer East.

There seems to be an impression fostered in Japan that it is not dignified for a Japanese youth to come to this country for the purpose of study unless he has money enough to support himself, and that if he tries to pay his expenses by domestic service or other labor he should not be regarded as a student. The whole plan of restriction by our Government, tho aided by that of Japan, appears to us

unfriendly and ungenerous. Our American students are not ashamed to earn their way by very humble service, and equally Japanese youth should not be repelled who work here, tho poor, to gain Western learning. In this connection we may mention that a late Japanese edict gives citizens of other nations resident in Japan the right to purchase or lease land, provided a similar right is given to Japanese in their own country.

It is a pity that the heresy-hunter still persists in his mischief. Last year three young men graduated from Union Theological Seminary, whose answers at their licensure disturbed some of the examiners, but two of them finally escaped the reach of their accusers, one by going into Y. M. C. A. work, and one by going to China. But one of them, Archibald Black, was ordained as pastor of a church in this city, and now he and the presbytery which ordained him and the seminary which graduated him, in which his father is an honored professor, are sternly presented to the General Assembly for condemnation by a secretary of the American Bible Society and a secretary of the American Tract Society. Have they not learned wisdom from the result of the trial by the Assembly of Professor Briggs and Prof. H. P. Smith?

Those who read "Tom" Watson's bitter tirade against the negro and negro suffrage may recall that a few years ago when he was Populist candidate he was seeking the votes of Georgia negroes, that as chairman of the State convention he left the chair to second the nomination of a negro as a member of the executive committee from the States at large. He then declared himself pledged to wipe out the color line in politics and give negroes the rights which the Democrats denied and which the Republicans were too weak to enforce. That is the kind of man he is. His latest ebullition is against foreign missionaries.

The nucleus of Halley's comet passed between the earth and the sun on schedule time during the night of May 18, but in the morning the tail, or part of it, was still to be seen in the east as before instead of in the west as was expected. Whether the curvature of the tail was greater than it appeared to be, so that it lagged behind the comet's head or passed to one side of the earth, or whether the tail divided or shrank at the time, is not yet known. There were no unusual atmospheric disturbances or meteoric displays anywhere, but this does not prove that the earth did not pass thru the tail, for astronomers were generally agreed that no effects would be perceptible from contact with so tenuous an appendage.

If a man wants to be a Methodist bishop, he must get out of the pastorate into the secretaryship of a board of the Church, or, still better, a presidency or at least a professorship in a Church college. Finding the board of bishops weak, the Southern Methodist Conference has just elected seven bishops, of whom one was a secretary, two professors and four college presidents. And yet it is the plain preachers that do the electing.

Another pugilist has been killed in California in a "bout." Nothing else was to be expected when men fight to a finish and a knockout. Such an event ought to suggest to the Golden State that its ore is base, its laws a disgrace to the nation. Just now it is advertising to the world its brutality in a severer fight between two bigger brutes.

Dr. Sargent, of Harvard, finds that the present day undergraduate is an inch taller and four or five pounds heavier than the undergraduate of thirty years ago, and he lays it to athletics. We doubt that. Why not lay it to the generally believed fact that their mothers are taller and more healthy than were their grandmothers?

Just now in many chief cities of Russia the Jews are being forcibly driven out who have been allowed to live outside the pale, or Jewish limits. It is a horrible cruelty, and they should come to this country, or go to Argentina, where they will be allowed to live where they please and be treated like other people.

Insurance

A Safe and Sane Fourth of July

For several years The Independent has advocated a discontinuance of old methods in celebrating the Fourth of July. This does not imply that The Independent lacks patriotism, but in view of the tremendous fire losses, the casualties and fatalities from tetanus and otherwise, which have too long been positive menaces, it has appeared that the time was at hand for radical changes in the methods of our celebration of the day. A quiet Fourth seems now to be probable in New York City under Mayor Gaynor. Certain of the New England cities have followed the lead of New York's Mayor, and in Newport, R. I., and in Melrose, Mass., at least action has been taken looking toward the safe and sane celebration of Independence Day. Chicago, Cleveland and some sixty other cities that are pretty generally scattered geographically have adopted anti-explosive laws that were tried out last year. The same is more or less true of Washington, D. C. Nearly the whole of New England is committed to conservatism in this matter. The Governors of many States have been enlisted in this reform movement, including Governors Comer of Alabama, Shafroth of Colorado, Pennewill of Delaware, Brady of Idaho, Deneen of Illinois, Sanders of Louisiana, Fernald of Maine, Crothers of Maryland, Draper of Massachusetts, Warner of Michigan, Eberhardt of Minnesota, Hadley of Missouri, Morris of Montana, Dickerson of Nevada, Fort of New Jersey, Burke of North Dakota, Benson of Oregon, Ansel of North Carolina, Vessey of South Dakota, Patterson of Tennessee, Prouty of Vermont, Hay of Washington and Davison of Wisconsin. Even the children in Bloomfield, N. J., are in favor of a quiet Fourth if we may judge from the result of a recent straw vote taken by them there, and so the good work goes on. The retailing of fireworks in the City of New York has been prohibited by an order issued by the Fire Commissioner. The Mayor was not at first disposed to favor the issuance of this order, but succumbed to the representations of the ladies of the Society for the Suppression of Unnecessary Noise and sundry other insistent persons. The figures that have been presented from year to year by the Chicago *Tribune,* tabulating the fire losses and other casualties which have resulted from the traditional unrestricted use of fireworks in honor of the day, have been so appalling that other cities will doubtless follow in the near future in the footsteps of those which have here been named. The New York *Tribune,* in some recent comments made upon proposed new methods of celebrating July Fourth, made many valuable suggestions looking toward the improved celebration of this national holiday. Among other suggestions made in the *Tribune's* article were the revival of the old mummer idea, at one time a feature of the celebration of the day in New England, when the ragshags parade was a morning feature of the celebration of July Fourth. The flying of dragon kites was another suggestion, based, no doubt, upon the Japanese custom of kite-flying. Still another suggestion favored was what was happily called a water day, one feature of which is a trip to the seaside, or as a substitute there was a walk in the woods or in the suburbs. The substitution of a barbecue for the dangerous and noisy Fourth methods of celebration was another proposed plan. Then there is always the possibility of reading the Declaration of Independence to fall back upon. If the old method of celebrating the day could be divorced from injuries to young persons through the careless use of firecrackers and toy pistols and other fireworks, and from the fire losses which have always resulted and which will always result, it might not be desirable to change the old means of celebrating, but under existing circumstances The Independent is heartily in favor of some plan that shall reduce, if not eliminate, the appalling life and fire losses that have taken place for many years, and, as the day is now celebrated, are always likely to obtain.

FINANCIAL

Stocks and the Situation

SALES of stock on the New York Exchange last week were only 1,689,600 shares, against 2,953,000 in the preceding week, and a recent level in the neighborhood of 4,000,000 or 5,000,000. But in this dullness prices do not decline. The advance last week, for the four stocks in which more than half the business was done, ranged from 1 to 4½ points, and there were gains for substantially all of the active securities. There have been several causes of this dullness, which is more or less in sympathy with conditions in some branches of industry. Crop prospects are not wholly satisfactory. Probably the crop of winter wheat will fall 30,000,000 bushels below that of last year. The surplus on hand largely exceeds that of one year ago, but high prices discourage exportation. In the steel trade the pace was too hot. Overproduction at the iron furnaces, accompanied by a marked decline of price, has compelled a reduction of output. The railroad companies dislike the bill pending at Washington, and they cannot foresee what the final provisions of it will be. Uncertainty is added to hostility. They have increased wages, but their plans for increasing rates have excited formidable opposition. The political situation does not encourage speculation or investment for an advance. It is plain that at the November elections the Republican party will suffer considerable loss; some expect that it will lose the House. The tariff has not been settled; some think there must soon be another revision, partial or complete. Capitalists, manufacturers and many other business men do not like tariff agitation. It appears that certain persons whose operations have recently swollen the volume of Stock Exchange transactions have withdrawn from the field and are waiting; also that they have been led to do this by some of the reasons just mentioned. But competent and unbiassed students of the situation will not say that it shows any fundamental weakness. On the Stock Exchange, for example, in a remarkably dull and narrow market, prices are maintained and some of them rise.

Increased Dividends

A STATEMENT published by the *Journal of Commerce* shows how dividend disbursements have been affected this year by the return of prosperity. Since January 1, twenty-three steam or electric railroads and sixty-three industrial corporations have increased, begun, or resumed the payment of dividends, and the additional payments thus indicated for the full year amount to $57,624,776, of which $15,003,706 is assigned to the roads, and $42,621,070 to the industrials. Dividends paid by these companies in the first five months of the year (amounting to $297,549,674) exceed by $46,000,000 those paid in the corresponding months of 1909. It is predicted that before the end of the year the list of eighty-six corporations will be increased by more than twenty. The largest addition to the railway dividend fund has been made by the New York Central. In the list of industrials, the Steel Corporation and the American Tobacco Company are the leaders.

*

....Statistics published in Germany indicate that the increase of wages there since 1895 has exceeded the increase of prices, which has been about 27 per cent.

....By a vote of 88 to 16 the lower branch of the New York Legislature has passed a bill placing telegraph and telephone companies under the Public Service Commission.

....By the efforts of the Interstate Commerce Commission a railroad war over import freight rates, which would have involved the entire Atlantic seaboard, has been averted. The controversy related to differentials in railroad rates from North Atlantic ports to the West.

....The City of New York is about to receive about $20,000,000 in special franchise taxes from street railway, gas, electric light and other public service corporations, owing to a settlement of suits to collect a little more than this sum. These taxes were imposed by the law of 1900, but have remained unpaid.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JUNE 2, 1910 No. 3209

Survey of the World

The President's Traveling Expenses

There was an acrimonious debate in the House on the 26th concerning the customary appropriation of $25,000 for the President's traveling expenses. As the present fiscal year's appropriation has been exhausted, the committee proposed that the appropriation for the coming year be "immediately available." On a point of order raised by Mr. Macon (Democrat), of Arkansas, these words were stricken out. Thereupon Mr. Tawney, chairman of the committee, attacked the Democrats, saying that they had urged the President to accept their invitation to visit their States, and after accepting his hospitality (on his special train, during his trip in the South), had turned about and criticised him in the House for spending money in traveling. "Is this Southern hospitality?" he asked. "Can there be a meaner man than he who invites another man to accept his hospitality, and then, when that man becomes his guest, turns around and kicks him because he accepted the invitation and criticises him, and in effect even charges him for his board?" Judge Bartlett, of Georgia, who entertained the President at his home in Macon, asked where board was charged, and Mr. Tawney replied that he thought it was in Georgia. Judge Bartlett said this was not true, also that he had paid fare on the President's train. Mr. Tawney then read a list of the thirty-six Democratic Senators and Representatives who had invited the President to visit their States, and of the Southern Representatives who had been guests of the President on the train. Answering a question, he admitted that the list had been given to him by the President's secretary, Mr. Carpenter. Whereupon Mr. Hardwick, of Georgia, whose name was on the list, said that he had paid his fare for 56 miles. He exprest surprise that the secretary should have sent the list. He couldn't believe that it had been done with the President's consent. Mr. Fitzgerald, of Brooklyn, criticised the President for spending so much time away from Washington.—— On the following day the President made public this letter, which he had sent to Mr. Tawney:

"My Dear Mr. Tawney: I am deeply grieved over the phase which the discussion of the appropriation for the traveling expenses of the President took yesterday. I think it is a legitimate argument in favor of such an appropriation that Congressmen and many others press the acceptance of invitations to visit their sections and districts, because the urgency of such requests indicates the opinion on the part of the people that one of the duties of the President is to visit the people in their homes.

"But the intimation or suggestion that the acceptance by Congressmen of the President's invitation to travel on the train with him in their respective districts or States was a reason why they should not vote their free opinion on the question of such an appropriation is to me a most painful one. In traveling upon the train they were not receiving my hospitality—they were only making a little more elaborate the cordial welcome they as Representatives of their districts wished to give.

"The feature of the discussion yesterday which was especially distressing to me was a suggested reflection on Southern hospitality. The intimation that somewhere in the South board was charged has no foundation in fact, and I never heard it intimated until I saw it in this morning's paper. In all my experience, and I have enjoyed the hospitality of many sections and countries of the world. I never had a more cordial, generous, open, and lavish welcome than I had in the Southern States during my trip, and the slightest hint that puts me in the attitude of a critic of that

hospitality gives me great pain. I am going to take the liberty of making this letter to you public. Very sincerely yours,
"WILLIAM H. TAFT."

Mr. Tawney published a statement saying he had never reflected upon the proverbial hospitality of the South, and that with respect to the charge for board his remarks had been incorrectly reported. On the same day Secretary Carpenter resigned and was at once appointed Minister to Morocco. The President said his secretary had asked to be relieved because his duties were affecting his health. Mr. Carpenter had been Mr. Taft's secretary for twelve years, beginning in the Philippines, and the President had frequently exprest appreciation of his services.——As the appropriation will not be available until July 1, the President until that date will pay his traveling expenses out of his own pocket. It is estimated that they will exceed $5,000. He traveled on the 29th to New York, where he reviewed the Decoration Day parade. He expects to attend the Bryn Mawr commencement on June 2, the commencement at the Ohio Northern University on the 3d, the commencements of two colleges in Pennsylvania on the 18th, the Yale exercises a few days later, and the meeting of the League of Republican Clubs in New York on the 24th. The commercial organizations of Augusta, Ga., exprest to him by telegraph their desire to contribute $5,000 to meet the deficiency in the appropriation.

Flying from Albany to New York

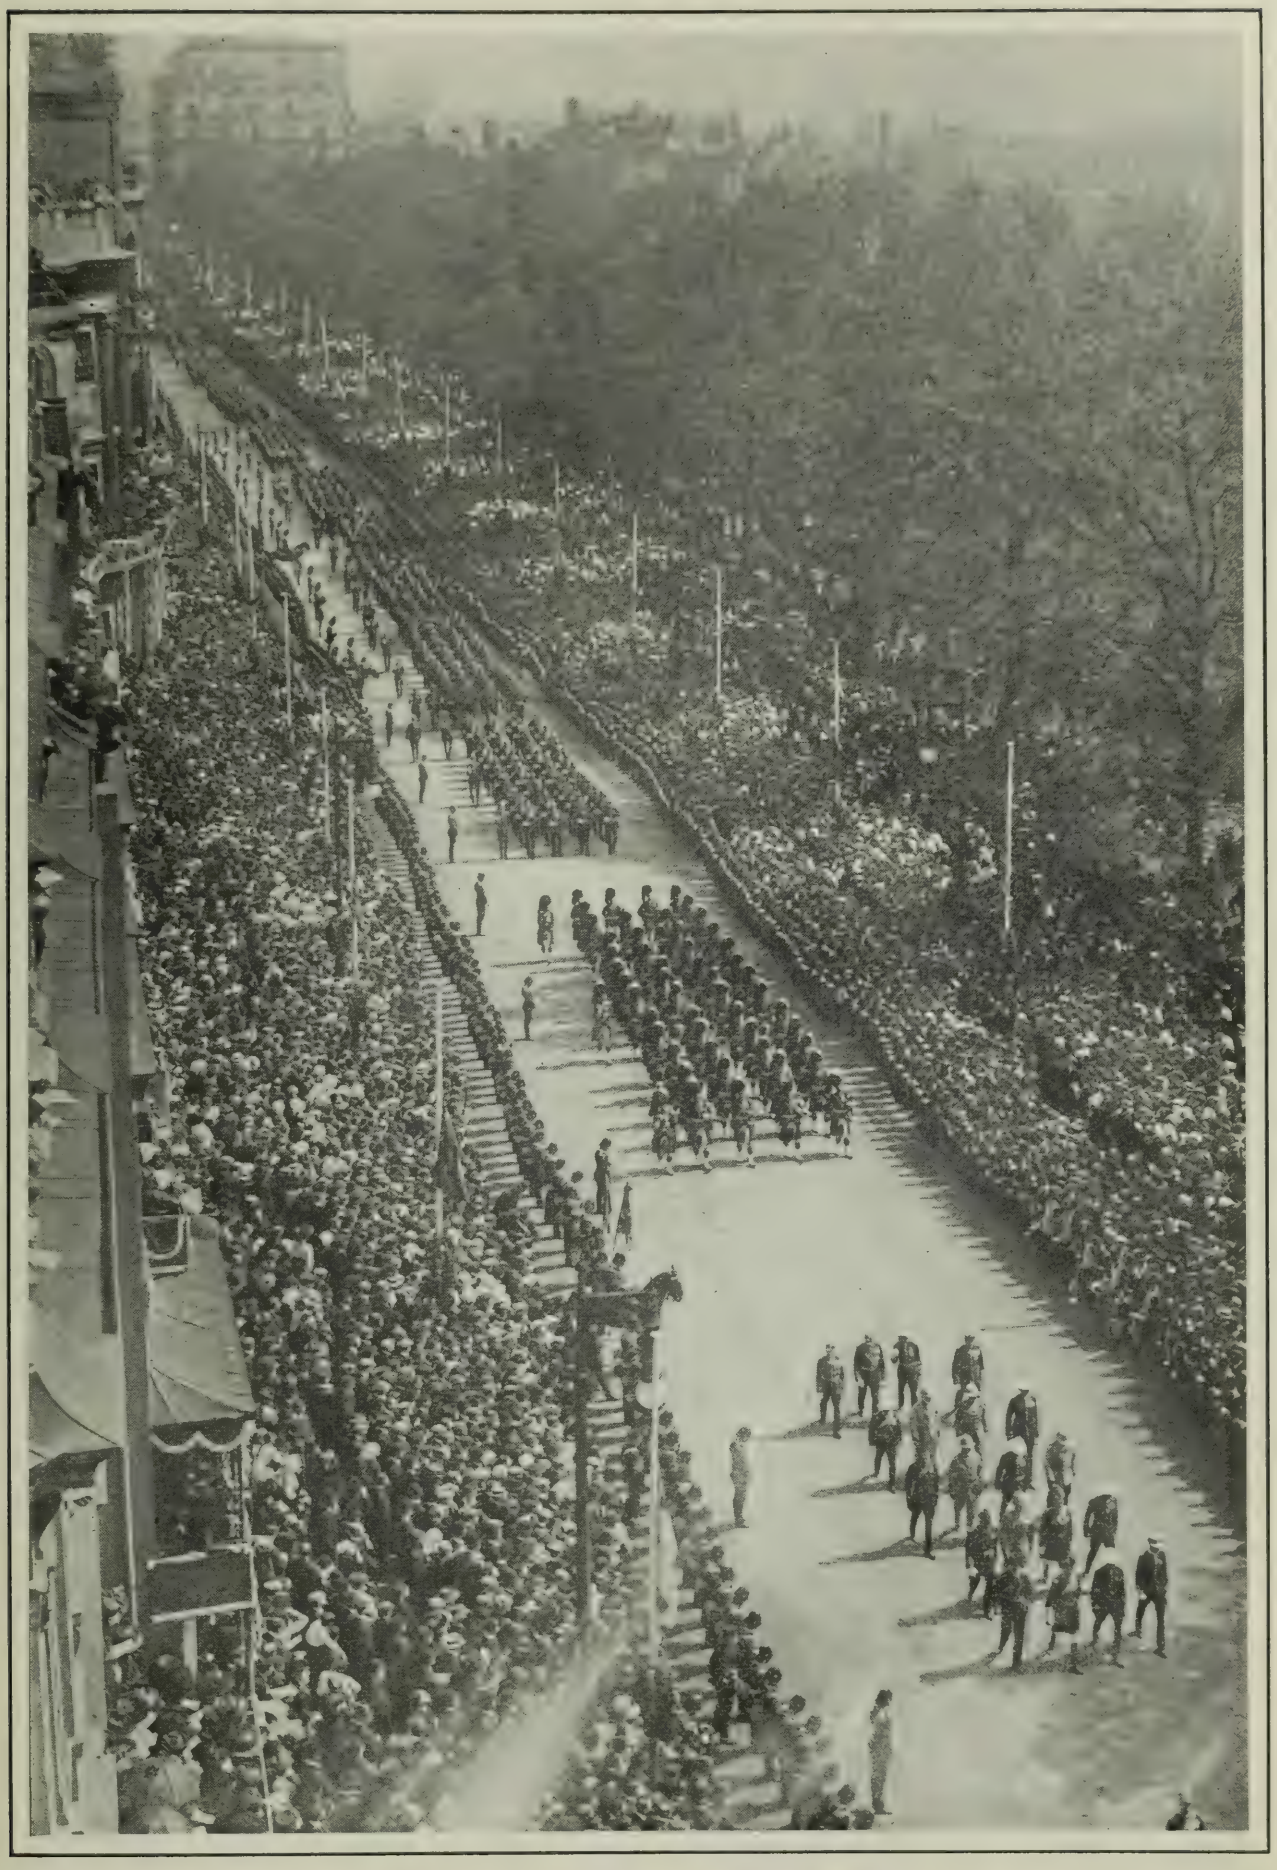
Glenn H. Curtiss, of Hammondsport, N. Y., flying from Albany to New York City on the 29th, made what is in some respects a new record for aeroplanes of the biplane type. Starting from the tide flats of Van Rensselaer Island, Albany, at 7:03 a. m., he rose to the hight of about 1,000 feet and remained at nearly this elevation for 40 miles. Swinging over the Catskill Mountains, his elevation at one time was about 5,000 feet. Later, he was within 40 feet of the surface of the Hudson River. In the neighborhood of Storm King Mountain, near West Point, he encountered eddies and gusts of wind which made the flight perilous, severely testing the machine and his skill. His first stop, to obtain gasoline, was made near Poughkeepsie, where he remained for a little more than an hour. His second stop was at 214th street, New York City. He had then traveled 137 miles and had really finished his journey, for the terms accompanying the offer of a prize of $10,000 by the New York *World* were that the flight should be from one city to the other, two landings being allowed in the course of it. He stopped at 214th street for oil, and, after resting for an hour, he rose in the air again and passed southward over the city, at times being 1,000 feet above it, landing on Governor's Island, in the harbor, at noon. His flying time for the entire distance of 150 miles had been only two hours and forty-six minutes, or an average of a little more than 54 miles an hour. The average for the fastest railway train between the two points is less than 50 miles. Curtiss's machine is the smallest biplane ever used for such a flight, measuring 30 feet by 30, with planes 4½ feet wide and 4½ feet apart. He used a propeller having a driving power of 350 pounds, and an engine of 50 horse power. This flight makes a new record for speed over so long a course. It is exceeded in distance only by Louis Paulhan's recent flight from London to Manchester, 185 miles, but that flight was really in two parts, with a whole night of rest lying between them, and the average speed was less than 45 miles an hour.

Bribery in the Illinois Legislature

Additional confessions relating to the purchase of votes for the election of United States Senator Lorimer, of Illinois, were made last week, and the number of legislators indicted was increased by four. All this was due to an inquiry concerning the award of a contract for supplying furniture to be used by the Legislature. The lowest bidder was unsuccessful, and it was suspected that bribery had determined the choice of his winning competitor. Senator D. W. Holstlaw (Democrat), of Iuka, a director of four banks, who had been a member of the committee that awarded the contract, was indicted at Springfield, on the 27th, for

CURTISS STARTING FROM POUGHKE EPSIE AT 8.22 A. M., SUNDAY, MAY 29.

perjury, because of his testimony before a grand jury. He had just returned from Baltimore, where, as a delegate from Illinois, he had attended a church missionary convention. On the following day he confessed not only that he was to receive $1,500 for his action concerning the furniture contract, but also that Senator John Broderick (Democrat), of Chicago, had hired him for $2,500 to vote for Lorimer, and that he had received $700 at the end of the session as his share of the "jackpot," or corruption fund, mentioned by White, Link and Beckemeyer, the legislators who confessed four weeks ago. Whereupon Broderick was indicted, and with him Senator S. C. Pemberton (Republican), of Oakland, and Representative Joseph S. Clark (Democrat), of Vandalia, who are accused because of their connection with the furniture contract. The agent of the successful bidder, a Chicago manufacturing corporation, had confessed to the grand jury. Immunity was granted to Senator Holstlaw. One of those indicted four weeks ago is Lee O'Neil Browne, leader of the Democratic minority in the House. It is charged that he hired Link, Beckemeyer and White to vote for Lorimer. When his case was taken up in court, at Chicago, last week, his counsel sought to defend him by asserting that the purchase of a legislator's vote for a Senatorial candidate was not a crime against the State of Illinois, because in so voting a legislator acted as an officer of the United States. If the sale of his vote was a criminal offense, he insisted, it could be considered only by a Federal court.——While Holstlaw was confessing to the grand jury, on the 28th, Senator Lorimer, in Washington, was defending himself in a long speech which he read from manuscript. He denounced all the confessions, and all the published accounts of them, as lies and forgeries. A large part of the speech was an attack upon the Chicago *Tribune,* which printed the first confession, and which, he asserted, sought in this way to destroy a new bank which he was organizing. He desired to "hurl the malicious, heart-



less and satanic lie back into the foul mouth that uttered it." Not a dollar, he declared, had been paid to any man for a vote in his favor. The *Tribune* and the Newspaper Trust had attacked him simply because he would not submit to their dictation. Governor Deneen, Senator Hopkins and Mayor Busse, he added, had formed "a misfit combination" to conspire against him. He asked for an investigation, and probably one will be made by the Committee on Elections.

Confession at the Sugar Trust Trial

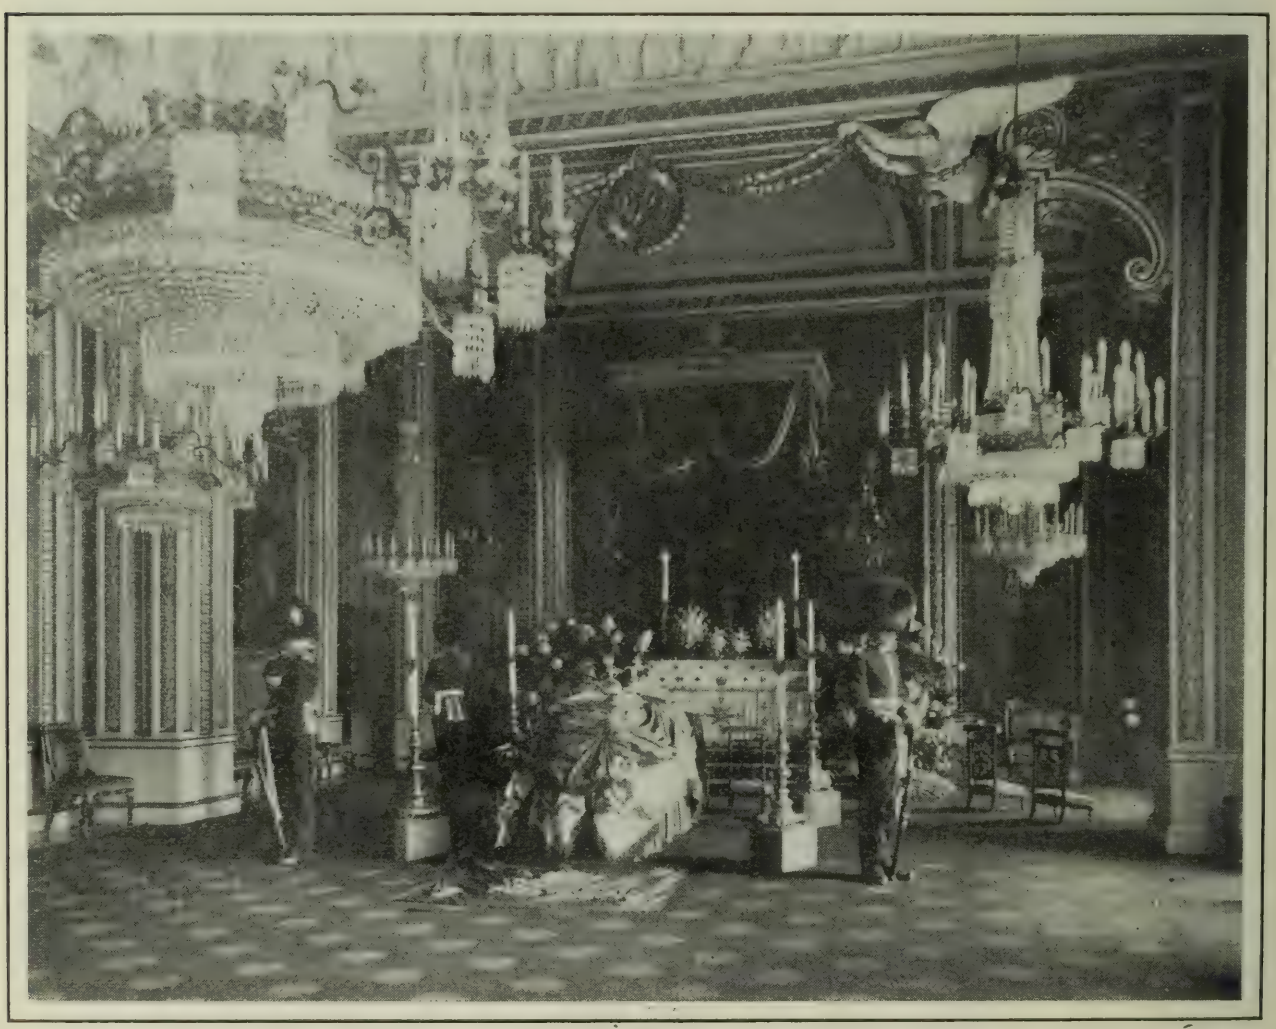
At the trial, last week, of Secretary Heike, Cashier Bendernagel, Superintendent Gerbracht and three of their subordinates in the service of the Sugar Trust, for defrauding the Government, the defendants were surprised by the appearance on the witness stand of Oliver Spitzer, recently found guilty and sent to the penitentiary at Atlanta. Spitzer was the Trust's dock superintendent at the great refinery in Williamsburgh, and had been employed by the Trust for twenty-nine years. Having served a few months of his two years' sentence, he was so tormented by his conscience that he decided to confess. He says he did not expect a pardon. President Taft gave him one, however, four days before he testified. On the witness stand he said that the cheating in weights had been going on since 1894. At first bags of lead were used, then packages of paper, and finally the steel springs which the Government's detectives found. He himself had invented this last method of falsifying the weights; he had bored the holes in the seventeen weighing machines, had bought the springs and had devised a red light alarm to warn the employees when a Government officer was approaching. But he insisted that no superior officer had directed or instructed him to cheat; he had merely followed a prevailing custom on the docks. He did point toward the late H. O. Havemeyer, president of the Trust, however, when he testified that at first he had declined to confess because confession would have "taken him into a cemetery." He admitted that in this remark he referred to Mr. Havemeyer. Gerbracht and Bendernagel, he said, had increased the wages of the employees who assisted in the cheating. By Spitzer and other witnesses, and by Heike's letters, it was shown that both the correct weights and the fraudulent weights were used in the Trust's office, the first for paying shippers and for refining, and the second for the payment of tariff duties. There was evidence that Secretary Heike was fully informed as to the differing weights, and that allowance for the cheating was made in balancing the books. After Spitzer had testified, three of the defendants—Harry W. Walker, assistant dock superintendent, and Jean M. Voelker and James F. Halligan, checkers who had used the steel springs—gave up the fight and pleaded guilty.

Nicaragua's Revolutionists

At the beginning of the present week, the revolutionists at Bluefields were completely surrounded by the Government forces. The steamship "Venus" landed 500 soldiers a few miles away, and on the 27th the Bluff, four miles from the city, with the custom house situated there, was captured by assault. For two days there was hard fighting on land in the rear of the city, where the revolutionists repelled the Government's army. American gunners were very prominent in the defense, and it is said that 250 of the Madriz soldiers were killed by the machine guns. After the loss of the Bluff, however, an impression prevailed that Estrada must soon surrender. Having been forbidden by the United States to bombard the city, the Madriz gunboats could not assist the land forces. Our Government speedily took measures to protect American residents. The "Prairie," at Philadelphia, started for Nicaragua, and will land about 500 marines at Bluefields. Owing to disclosures concerning the departure of the "Venus" from New Orleans, some predict that our Government will intervene and insist upon a new election. Publication of the correspondence between President Madriz and his representatives in this country shows that the authorities at New Orleans were intentionally misled concerning the mission of the steamship and the character of her cargo.——Altho

THE FUNERAL PROCESSION OF KING EDWARD VII.

The photograph shows the Royal Horse Guards, First and Second Life Guards marching to Westminster.



the offer of mediation was accepted by Ecuador and Peru, both countries have continued to prepare for war. It is reported that, in accepting the offer, Ecuador imposed conditions which Peru rejected.——President Taft intends to visit the Isthmus and inspect the canal in the latter part of November next. Work at Culebra has been delayed because 2,000,000 yards of material are sliding back into the cut.

The Prussian Franchise Bill

A severe blow has been dealt to the prestige of the German Chancellor, Dr. von Bethmann-Hollweg, in the withdrawal of the bill for the reform of the Prussian electoral system. The bill excited the furious resentment of the Social Democrats and other radical parties because it failed to grant them anything like equality of representation in proportion to their numbers. They began to agitate against it by means of mass meetings and street demonstrations in all the large cities of the empire, which not infrequently resulted in conflicts with the police. On the other hand, the bill when it was sent to the Upper House was amended in such a way as to make it still more conservative. The Chancellor in withdrawing it stated that a continuance of the bitter agitation against the election system was most likely to continue until the Government submitted new legislation representing an endeavor to carry out the Kaiser's promise made in the speech from the throne.

Persia as a Storm-Center

It is apparent that the Near East has of late taken the place of the Far East as the scene of international intrigue. Germany is insisting as strenuously on the "open door" in Persia as we did in Manchuria. The German ambassadors in London and St. Petersburg have protested recently against the refusal of Great Britain and Russia to

THE BODY OF EDWARD VII LYING IN STATE IN THE THRONE ROOM OF BUCKINGHAM PALACE.

allow Persia to avail herself of any foreign capital for the development of the country and the strengthening of the Government. The German bank at Teheran stands ready to loan money to the Persian Government at lower rates than the Russians are furnishing it for, and the German company which has the franchise for the railroad thru Asiatic Turkey is anxious to get an outlet on the Persian Gulf. There are rumors that American capital is to be used for the completion of this railroad. Its importance lies in the fact that it will provide for the first time a land route to India. This project was a double menace to the interests of Great Britain; it would deprive the British steamship lines of a large part of their trade and it would break the monopoly of the Mediterranean route, which England has secured at so great a cost. German influence was dominant in Constantinople in the days of Abdul Hamid. The Kaiser always posed as the friend of the Sultan, and German officers drilled the troops which conquered Greece. When the Young Turks came into power it was supposed that Germany had been eliminated from the Near Eastern problem, but it appears to have been merely eclipsed. The German Government has now apparently convinced the Porte that Turkish as well as German interests are threatened by the Anglo-Russian dominance in Persia and the two countries seem to be now working together to break it up. It is reported that the Turkish Ministry has changed the route of the projected railroad to Bagdad, the German concession, so that it will not go to either Alexandretta or Aleppo, but go eastward from Adana, the scene of the recent massacres, by a northerly and inland route. Still, it cannot become a route for thru traffic unless it can get an outlet on the Persian Gulf or be carried on to India. In either case it would have to pass thru that part of Persia which has been defined by the Anglo-Russian convention as within the British sphere of influence. In the meantime the British merchants on the Gulf are complaining that their trade is being ruined thru the inability of the Persian Government to maintain order in the southern part of the country. At the port of Bushire the imports and exports, which two years ago amounted to $7,500,000, have fallen to half that. The caravans into the interior have to pay an extortionate tribute to the tribal chiefs and are often robbed besides of all their goods. The British merchants are anxious to have their Government interfere in the south as Russia has in the north. If their demands are complied with it will mean ultimately the destruction of Persian autonomy and the division of that country between the two Powers, which is obviously what Germany fears. The situation is further complicated by the Mesopotamian irrigation scheme. An English company proposes to restore several million acres of the Tigris-Euphrates valley to its former fertility, but this plan is necessarily dependent upon the completion of the Bagdad railroad or some substitute for it.

Foreign Notes

Ex-President Roosevelt was given the honorary degree of doctor of laws from Cambridge University on May 26. After the Latin eulogy by the public orator and the conferring of the degree by the Vice-Chancellor, Canon Mason, Master of Pembroke College, the students lowered from the gallery a Teddy bear and were highly amused when Dr. Roosevelt reached up and patted it on the head.——The conflict between the Irish factions, the Nationalists led by John Redmond and the United Irish League by William O'Brien, has reached the fighting pitch. At Newmarket the O'Brienites attempted to break up a meeting of the Redmond party, and an all-day riot ensued, in which bottles, stones and revolvers were the weapons. Many buildings were burned, and one man was killed and several injured.—— It is regarded as practically settled that Lord Kitchener will be the next Viceroy of India.——The Radicals, who have for a short time had control of the Danish Government, were defeated in the elections of May 20, and the Cabinet of Premier Zahle will resign as soon as the King returns from London. The Radicals in the recent election advocated a reorganization of the National Diet and a repeal of the defense act of 1909.——

EX-PRESIDENT ROOSEVELT TALKING TO KAISER WILHELM DURING THE MANEUVERS AT BERLIN.

A submarine disaster even more serious than that which occurred in Japan not long ago was the sinking of the French submarine "Pluviose," when maneuvering near Calais. It was run over, while partially submerged, by a Channel steamer two miles out from the harbor. It sank immediately in 30 fathoms of water, and it was impossible to raise it for some days. The three officers and twenty-four men imprisoned in it perished thru suffocation or drowning.——The French courts, alarmed at the increase of crime, have adopted more severe measures. Heavy penalties are being enforced for financial offenses, and the guillotine has been re-established as a penalty for murder. Three men were guillotined in France and Algeria on May 24, before crowds of spectators. ——In Madrid the accidental explosion of a bomb killed the anarchist who was carrying it for the purpose of assassinating King Alfonso on his return from London. It is reported that the plot included also the assassination of King Manuel of Portugal.——Since the Cretans continue their agitation for annexation to Greece, the protecting Powers have under consideration the reinstatement of the garrison of foreign troops, or, as an alternative, the abandonment of the island to the Turkish Government, to establish its authority as best it may. France and Great Britain have proposed to the other protecting Powers, Russia and Italy, that the Cretans be required to admit Mohammedan deputies to the Cretan Assembly. Recently when the Mohammedan deputies protested against the action of the Assembly in swearing allegiance to the King of the Hellenes, they were insulted and expelled.——Prof. Robert Koch died at Baden-Baden on May 27, of heart disease, in the sixty-seventh year of his age. He was the foremost of contemporary bacteriologists, and received in 1905 the Nobel Prize for his discoveries. To his researches we largely owe our knowledge of the facts that some of the most fatal diseases that afflict mankind are due to germs, and that the injurious effects of these may be counteracted by antitoxins.

For an Album

BY JOHN GREENLEAF WHITTIER

[I have before me an album for which Whittier wrote upon its first page these dedicatory lines fifty-seven years ago. They were written for a young lady, a neighbor and distant relative of the poet, and they have never appeared in print.—S. T. PICKARD.]

LIKE a virgin heart, unwrit
By the pen of passion yet
By familiar touch or look,
Unprofanéd lies thy book.
What shall fill the spotless pages?
Lover's vows or thoughts of sages?
Shall it Friendship's altar prove,
Or the burning shrine of Love?

Human Love, I give thee warning,
Is the shadow of the Morning
On the meadow, on the water,
Ever growing short and shorter,
Narrowing in the sun, and gone
Ere the weary noon comes on.
Human Friendship is the shadow
Of the Evening on the meadow,
Ever deepening, ever growing,
While the sun is downward going,
Till o'er all the rosy light
Flow the silent waves of night.

Love of God is more than these—
Shade of Eden's holy trees—
Palms the storm has never tossed,
Sacred shelter never lost.
In thy Duty's little round,
Seek it while it may be found,
While thy path of life is wet
With the dews of morning yet,
Ere the night of death shall fall
And the darkness cover all!

J. G. W.

AMESBURY, 16th 3d mo. 1853.

Vacation Experiences

[There is opportunity for an interminable triple debate on the question of which is the most enjoyable: (a) to look forward to a vacation; (b) to be having one, or (c) to tell about it afterward. It depends on circumstances and still more on temperament. At any rate category (c) is not to be despised as is evidenced by the generous response to our request for vacation stories. We hope that all of our readers who have not sent us their experiences will have such enjoyable vacations this summer that they will be moved to share their pleasure with the rest of THE INDEPENDENT circle next year. We may imagine a very big camp fire around which all our readers are seated on folding stools, boxes, wagon seats, logs, blankets and the solid earth, in attitudes graceful or comfortable, or both, or neither, while "That reminds me" comes spontaneously from each one in the ring. That is the spirit in which we would wish these frankly personal letters to be read. If our subscribers do not like this sort of "amateur night" vacation number they should stop writing to us that they do like it. Then we will hire some professional writer to take a vacation and narrate it in the usual professional way.—EDITOR.]

Vacations on the Instalment Plan.

When I have seen the call for vacation letters in years past, I have thought with regret that I certainly could not write on that subject, because I had never taken a vacation. For over twenty-five years I have lived in the same spot, brought up a large family, made butter, many thousand pounds in all, and helped as I could with any farm work in progress. Leaving my work to seek rest and change elsewhere, was not to be thought of.

However, as I suppose I am not very different from other people, and as all seem to agree that one *must* have vacations to keep refreshed in mind and body and so fit for work, I began to wonder if I could have had some "unbeknownst," as it were. Then it came to me as by an inspiration. I had been taking my vacations on the instalment plan, and that is why life has always seemed so fresh and interesting.

The instalments have been of all kinds and lengths, and taken at all sorts of times and seasons. I am not sure that an account of them would be of use or interest to any one else, but possibly it would.

The first, last and most frequent escape from the cares and worries of every-day life came thru reading. I cannot remember when I did not read. Since I have been keeping house, nearly every evening when I was well and the family alone, I have read aloud. To give one's self up to Scott, Dickens, George Eliot, Bayard Taylor and their like, is to travel farther from a rocky New England farm than one could get in any other way. Gibbon, Froude and Lamb rocked the babies with me. The news of the day, *The Youth's Companion* and THE INDEPENDENT, usually go to the table with me, and are shared with the others in bits, till I can lean back and finish the "nooning" with a short story or article.

Of longer duration and at longer intervals, I have taken quite a different vacation. It might not appear like one to the casual observer, but that is what it was. To leave the work-a-day part of the house and stay for days in the "other room," where the few best things are, the prettiest pictures, and the bookcase behind the door; nothing to do but lie still and be waited on, and look at the new treasure beside one—and no one but the maker ever found painting or sculpture so charming—is surely rest and change. So long a rest, and so great a change, that the first return to ordinary life seems like coming back from a far country, and the rooms have a strangely odd and unfamiliar look.

Perhaps, too, it would not seem like a vacation to every one, to work for a few minutes in the kitchen garden; but it does to me. I am convinced that many of my ancestors must have been gardeners. Why else should it give me such pleasure to watch and tend the growing things; such delight to see

currants and blackberries bending under their loads; such solid satisfaction to carry my trophies in to supply the table? Even when there is no time to work among the plants a few minutes' walk thru the garden before dark is a great comfort.

Then there are the instalments that come in the time of greatest stress of farm work—haying time. They come in the shape of riding the horse-rake. I never longed to ride horse back, but I feel an enjoyable exhilaration as I mount my wheel and roll away. A professional pride in the work, too, is part of the pleasure; it has always been my work, and no one else can do it quite so satisfactorily. But the real vacation part consists in the much prized hour or two that I have all to myself; nothing to break in upon my thoughts; leisure to take my fill of the beautiful landscape spread out before me; often to watch the showers go circling past to north or south. I have counted five or six in sight at once. All these, blended with the scent of clover and notes of birds and the ever-changing forms of summer clouds against their deep blue background, give a refreshment to the soul that goes deep and lasts long.

I am afraid my story is growing too long, so I will only mention the flower-hunting rambles taken with the children as they grew old enough, the long drives across the beautiful country when the time came that they must be carried "away to school," and brought home again, and the delightful visits to those who have set up household altars for themselves.

In fact, as I look back over my life it seems too full of pleasant change and restful intervals to need any set and planned vacation.

MAINE.

How We Climbed Evans.

We were women in the thirties but our souls were young as we set forth that August afternoon in quest of adventure. My companions were seasoned mountain climbers with many peaks to their credit. The boulder fields of Long's and the glacier heights of the Arapahoes were to them twice-told tales. As for me, I could rough it with any one. We had all been in camp in Platte Canyon, so from there we made our start. Our goal was Mount Evans, 14,321 feet high. We obeyed the mountain dictum as to dress, the rucksacks were on our backs and our blankets, army style, over our shoulders.

It was 4 p. m. when we began our journey up Elk Creek. The hot sun beat down into the canyon and made our twenty pound packs weigh untold tons. Till the shadows began to lengthen on the hillside, we walked leisurely enjoying the wild flowers and fruit and the music of the creek's waters. Moonlight found us enjoying keenly the cool breezes which came down the canyon. The packs had lightened and our steps had quickened. Here and there in more open spots in the canyon we passed a ranch and unwittingly stirred up the dogs on guard. We had been seeking the home of

THE THREE TRAMPS.

one, Dean, a whilom guide. When we dared to face the yelping dogs we gleaned facts for the way at the ranches passed. Eleven o'clock found us still below the Dean ranch, so we determined to camp for the night. Between the road and the creek we built our fire and cooked our supper of bacon, tea, bread and cheese. Around the blazing fire we curled up for the night. Even with a pair of woolen blankets and a continuous fire we were none too warm. The coyotes' distant howl was the only disturbing sound that night. By dawn we had breakfasted and were again ascending the canyon. At the Dean ranch we received advice for the surest mountain trail. Evans loomed before us with snow filling its great crevasses. We set forth jubilantly and all day climbed steadily upward. After the first few miles no trail was found so it was little wonder that in the tall timber and deadwood we should go astray. When at last we emerged on a swampy plateau short of timber line we found ourselves about four miles north of Evans. It was 4 p. m., rain was falling and the wind rising. Safety lay in getting down to the nearest habitation for the night and making another attempt next day. For four hours we plunged down the rough mountain side and at last reached a small ranch. We begged leave to sleep in the barn but were offered the tiny attic of the cottage. It was the only available dry spot as rain was falling heavily. We munched bread and cheese and rolled up in our blankets on the board floor. We had done about twenty-five miles of mountain work that day, so it was little wonder that we slept like the dead. Once again we were on our way by dawn, but this time down the canyon to the guide's ranch. There we rested until he made all arrangements to accompany us. That afternoon we drove by another and more circuitous way over an almost obliterated road to a sheltered spot at the foot of Evans. There we spent the night sleeping warmly in our blankets by the great camp fire.

We were stirring betimes next morning. Breakfast over and the horses hobbled, with chocolate and raisins in our pockets we began the climb. It was rough going. Marshy plateaus, willows, fallen timber, ice, snow and mountain streams were inevitable. As we were on that side of the mountain where there is no definite trail it took us till high noon to make the top. Great was our reward. There spread before us were snow-capped peaks by the hundred. Gray's and James's, Long's and the Arapahoes, Pike's and the Ten Mile Range, all awed us into silence. The keen winds cut thru us. As we reached timber-line a sudden mountain storm broke over us. Despite the heavy thunder and lightning we sought shelter in the pines. As the mercury fell the rain became sleet and then snow which carpeted the mountain side. The storm spent we plunged downward. The first patch of tall willows drenched us to the skin, so we elected a more roundabout way home. This proved fatal, for our guide, driven from his customary haunts, lost himself and us in the storm-swept hills. For hours the valleys and hills, the close timber and dead wood, the swollen creeks and marshy ground knew us intimately. We walked and climbed steadily until at 7 p. m. good fortune brought us into the valley where our camp lay. For hours we had walked as mere automatons and feet and legs moved independently of volition. The horses hitched, we wrapped ourselves in every available dry thing and set out for the ranch. Here we ate like wolves before divesting ourselves of the wet things and crawling into comfortable beds. By sun-up we were again on the road. This time we sought an indistinct trail over Green Mountain and down Slaughter House Gulch, reaching Platte Canyon four miles below camp. Here were warmth and cheer and a good dinner to round out our adventure.

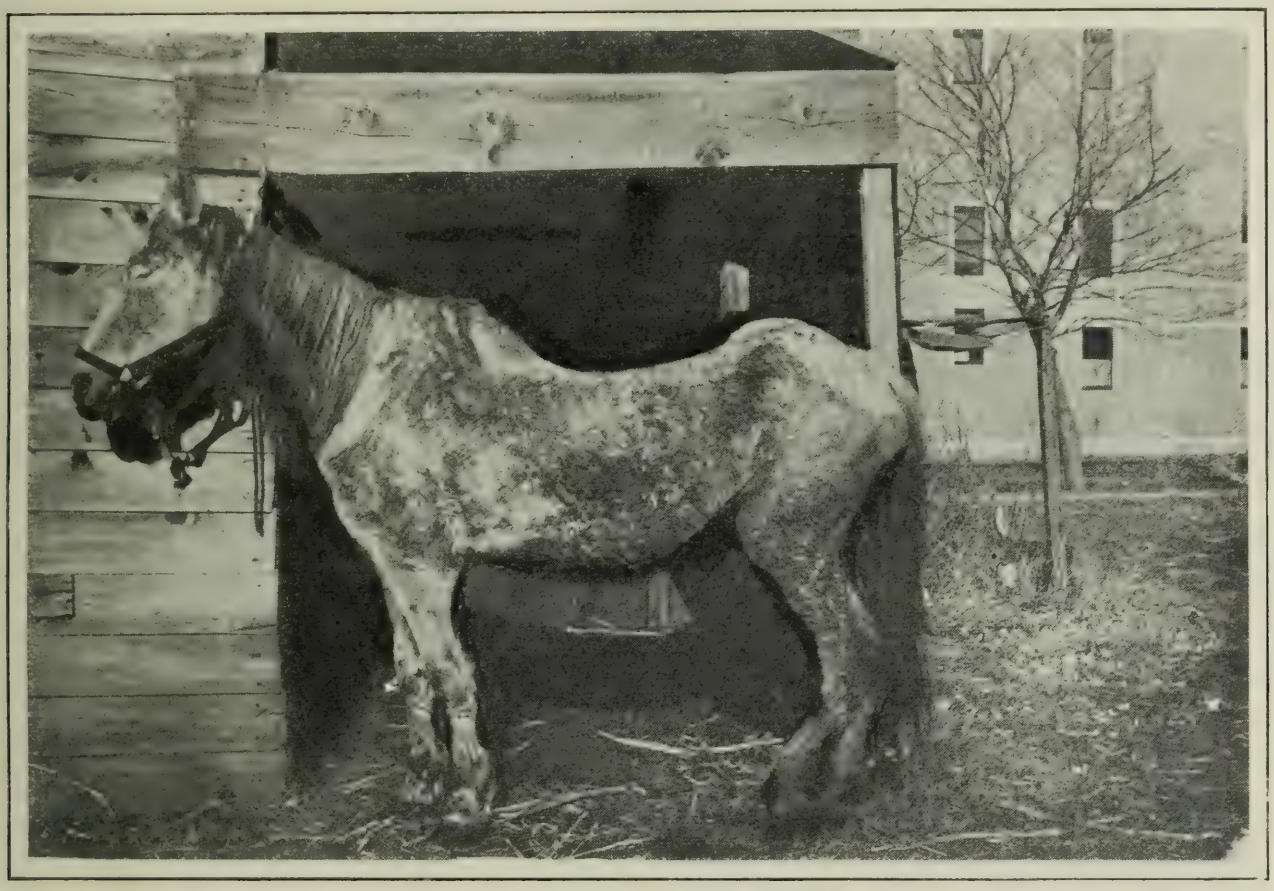
Denver, Colo.

The Attractions of Country Life.

When my chum Nellie and I graduated from a Chicago high school we had never been outside the city limits. We had listened with longing hearts as other students talked of visiting in the country or going to the mountains or seashore for the summer, but we knew that our parents' slender resources had been taxed to keep us in school, and now we were eager to find not an outing but an occupation .

When talking of this my Aunt Mary, whose home was on a farm ninety miles away, impulsively said, "Why, girls, I'll promise you both an outing and occupation if you are willing to work and will go home with me. My neighbor, Mrs. Macy, and I need help this summer and can give you an opportunity to practise what you have learned in your school's cooking department. I warrant a few months of country life would be good for you both!"

'Twas soon settled, and next Monday we three were speeding westward, Nellie and I feasting our eyes on the green fields, the winding streams with their fringe of trees, pastures with fine herds of cattle or horses, and cosy farm houses that make this country in June a vision of beauty. Space forbids details. I can barely hint at the experiences and benefits that summer brought us. How we girls found the air purer, the fruit sweeter, the flowers more abundant and beautiful, and the people and life more real than aught we had known before. We often worked to the tired point; but how we reveled in cooking with such abundance of fresh eggs, rich milk, golden butter, fine, crisp vegetables and well-ripened fruits; what pleasure we found in keeping those sunny, roomy houses in order, in learning to gather and put up fruit, and in various other duties. Nellie called each day's work "a picnic," but we found many other pleasures.



Mrs. Macy's son Jim, lately

from the Agricultural College, was an enthusiastic botanist and soon found we were too. Then followed many pleasant strolls together, hunting for specimens, or, better still, we skimmed the country roads for miles around behind Jim's spirited driving team that so often needed exercise. By autumn we were so in love with country life that we gladly became "country school marms."

Six years have flown. Nellie is now a successful teacher in our nearest town while I am truly,

FARMER JIM'S HAPPY WIFE.

IOWA.

AS "JOE" UNDOUBTEDLY LOOKED AFTER THE TRIP.

Six Hundred Miles in a Buggy.

We were two college fellows out canvassing in Northern Ohio and wished to close the summer with a lark of some kind. As we had more time than money, and horses were reasonable and old buggies cheap that summer, a cross country drive was decided upon and Newburgh-on-the-Hudson selected as our objective point. We accordingly bought a strong horse—"Joe" we called him—a decrepit old buggy and a makeshift harness. A heavy horse blanket found one day in the road was added to the outfit. Clothes were carried in two valises in the bottom of the buggy.

Our course was laid across Northern Ohio and Pennsylvania, meeting the Susquehanna River about fifteen miles south of the New York line. This we followed for fifty miles and then turned east on a splendid pike which led us to our destination. Fifteen days were consumed in the trip, one being spent in rest. We wished to go as cheaply as possible and as a result were in bed only two nights out of the fourteen. The others were passed camping out in the woods or along the road or sleeping in the hay. After walking and driving all day a hay mow was an ideal place for a restful sleep, and our usual supper of bread and milk seemed as good as a course dinner. The country people charged us nothing for stabling the horse or for a bed in the hay, and frequently refused pay for the simple provisions obtained from them. Every one seemed to be interested in our long trip and desirous of helping us along. There was plenty of fruit thru the country to be had for the picking, and milk and bread and butter and other simple things could be obtained for a trifle, so that our living cost us less than ten cents a day apiece. Oats for "Joe" amounted to about twelve cents a day.

The total distance covered was 625 miles, making an average of nearly 45 miles a day, much of which was over mountain roads in a bad state of repair. The greatest distance covered in one day was 54 miles, the shortest 30 miles. This may appear like a hard trip for a single horse and it must be acknowledged that "Joe" was tired out when he pulled us into Newburgh. But after a week's rest he had recovered his old spirits and was sold for just what we paid for him.

The trip was not devoid of difficulty or excitement. This horse of ours was a country chap and had never seen an electric car. On the second day out we met one suddenly at a turn in the road and were promptly turned over in the ditch and dragged thru the grass and mud at a rate which put the car to shame. There was scarcely anything left of the buggy but a memory. We hauled all that could be found into a neighboring town and were allowed fifty cents on it in a bargain for another old vehicle, which made the rest of the trip without serious mishap.

In many places the mile posts were inaccurate and misleading. It was the source of continual amusement and some annoyance to be told by one guide post "——ville 5 miles," and about three miles further have it announced by seemingly as good an authority that the village was still five miles distant. In some parts of the sparsely settled country the few men we met seemed to have no better conception of distance than the silent monitors by the wayside.

THE GYPSY QUEEN.
Otherwise the author.

One evening we were driven out of our camping place in an open woods by a wild cat, which made the night hideous by yelling at us from the treetops. "Joe" absolutely refused to stay in that vicinity. Another time a big cat and kitten stopped within a few paces to inspect us in a leisurely way and it was then that we most keenly regretted having taken no firearms.

As an inexpensive and healthful outing this trip was a great success and took us thru a country of unsurpassed scenic beauty. The pictures imprest upon our minds during those two weeks will never cease to charm and delight.

Below is a statement of expenses incurred:

Horse	$50.00
Harness	1.50
First buggy	6.50
Second buggy	8.50
Repairs en route	.75
State maps	.50
Maintenance (horse) en route	1.75
Maintenance (men) en route	2.13
	$71.63
Received by sale of horse	50.00
Net cost	$21.63

W. L. DUBOIS.

BUFFALO, N. Y.

Gipsying.

It was the month of August when a number of college students, consisting of eight girls, including myself, two of the girls' brothers and a chaperon, started for a week's outing as a mimic band of gypsies.

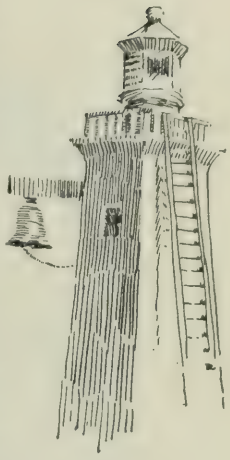
We fitted up two huckster wagons for the purpose. The coops were removed, the floors in the back of the wagons were covered with straw, and plenty of bedclothes; in the front were placed a few old chairs, and at the sides were hung convenient bags and several lanterns; the chests in the front of the wagons, which the hucksters use for groceries, were utilized as receptacles for our food supplies. In regard to dress, we imitated, as nearly as possible, the typical gypsy. To prevent an overamount of baggage, as well as to enhance the reality of the trip, each one was allowed but one luxury, manicuring instruments, powder puffs, etc., were classed as such.

Thus it was that we, the imitative nomads, started out, and it was surprising how soon we entered into the gypsy spirit. The balmy air, together with the jolting of the wagons, gave us at once that lazy and satisfied feeling, with all ambition thrown to the four winds, and we felt that we were indeed the children of Nature.

We made but few stops save to cook our simple meals in the cool shade of a tree, or near a forest, with its outstretched leafy branches always ready to welcome us to its sacred precinct. The birds sang to us, the fields and their crops seemed planted and cultivated for us alone and not for the owner. The evenings were spent around a campfire, telling stories, popping corn, and roasting marshmallows. And when bedtime came our beds were ready for us on the straw in the wagons, and the boys bivouacked in hammocks which they hung between the two wagons.

In this manner we traveled from day to day, enjoying the varying landscape, and with an occasional excitement, such as a storm, a begging experience and an effort on the part of some farmer to trade horses with us. But the meeting of a real band of gypsies, and their proposal that we travel together, we consider the best reminiscence of the trip.

LOUISE ESPEY.



RISING SUN, IND.

Ideal.

A vacation demands the following ingredients: Pleasure (including rest and recreation), 40 per cent.; economy (including old clothes), 50 per cent.; and education (things worth seeing), 10 per cent. And but one form can give these ingredients in the proper proportions—a cruise. Get a boat—very inexpensive when several share the rental; eat whatever you want, cooking it yourselves; and sail along the shore of Connecticut. Start anywhere east of Hell Gate, and stop when your time allowance has run out.

Rest—you can have all you want; anchor when you will, and sleep the whole day if you are so inclined. Sail, fish, watch passing vessels (and they are many and varied, both day and night), according as the spirit moves you. And do not forget to wear old clothes, thereby extending the life of your business and other suits perhaps for another season. And, oh, the comfort of old clothes!

Education (which also borders on the 40 per cent. ingredient)—Long Island Sound is lined with places of interest. You can see countless homes of beauty which are the millionaires' summer residences. You can go up the Housatonic River and get a taste of New England quietness, or visit South Norwalk and Bridgeport and see her bustling side. Stop off at New Haven and see the famous Yale University, when freed from the ant-like students of her campuses. And, a little further down ("down," for you are going east), you can see at least three towns that claim to have first housed her, tho finding that the official recognition is given to Saybrook. On the way you can twist thru the miniature Thousand Islands, behind one of which islands Captain Kidd is reported to have hidden from the passing British, lowering the topmasts of his vessel because they extended above the treetops. And all along there are interesting things to be seen.

We must only mention the safety of such a cruise. The shore is everywhere indented with small but safe harbors and gentle but deep streams which come down from the hills. So that no storm can ever arise too quickly for you to be unable to reach an absolutely sheltered anchorage. And, lastly, there are the countless hills which rise from near the shore, from which you may get an aeronautic view of the distance covered each day and to be covered the next day.

Rev. George Roberts, Jr.

Saranac Lake, N. Y.

This Ends Well.

We married. We settled down. For a number of years after this interesting event, business was king. Seven days in the week the public was master. Our only outings an

SOLID COMFORT.

occasional flight to a nearby wood lot. One winter's night there was a crackling, roaring, blazing, and the ties that bound us were burned. 'Tis an ill fire that burns nobody good. Our first vacation was begun.

There were preliminaries extending thru some months, then we boarded a train, speeding gleefully westward, considering a section in a tourist car a palace of delight. A camping tour of seventeen days, to and thru that great wonderland—the Yellowstone National Park—followed. We drove a distance of some three hundred miles, storing in our minds pictures of the beauty and grandeur and awfulness of Nature, to be recalled if ever again we're fettered by civilization.

Is our vacation ended? By no means. We're right in the midst of it, peacefully squatting on a homestead on a high, rolling prairie in western Idaho.

We are a modern Robinson Crusoe and his Friday. Have built our dwelling above, around and beneath us. Our bedstead, tables, chairs, wardrobe and haybox are all homemade.

There's a shelter, too, for our team, Tex and Prince, for Hendrick, our lordly rooster, and our thirteen hens. Only hens we ever owned, and they lay. How that first egg filled us with pride, such a nice egg, so big and undoubtedly fresh! We are miles from a railroad, and twenty from the church of our choice, but the team are good roadsters, and the everlasting hills, the mountains, glorified at sunrise and sunset, declare His presence and perpetual care. We duly observe the holidays as they come. Christmas made christmassy, the New Year watched in, Lincoln's and Washington's birthdays faithfully celebrated. Mail ventures thrice weekly within two miles, always bringing letters, papers and magazines. "INDEPENDENT come today?"

"Yes."

We'll survey the world, criticise the contributors, disagree with the editor, and when the year draws to a close send in our subscription for 1911.

MINA P. COWLES.

BADGER, IDAHO.

The Time of Our Lives.

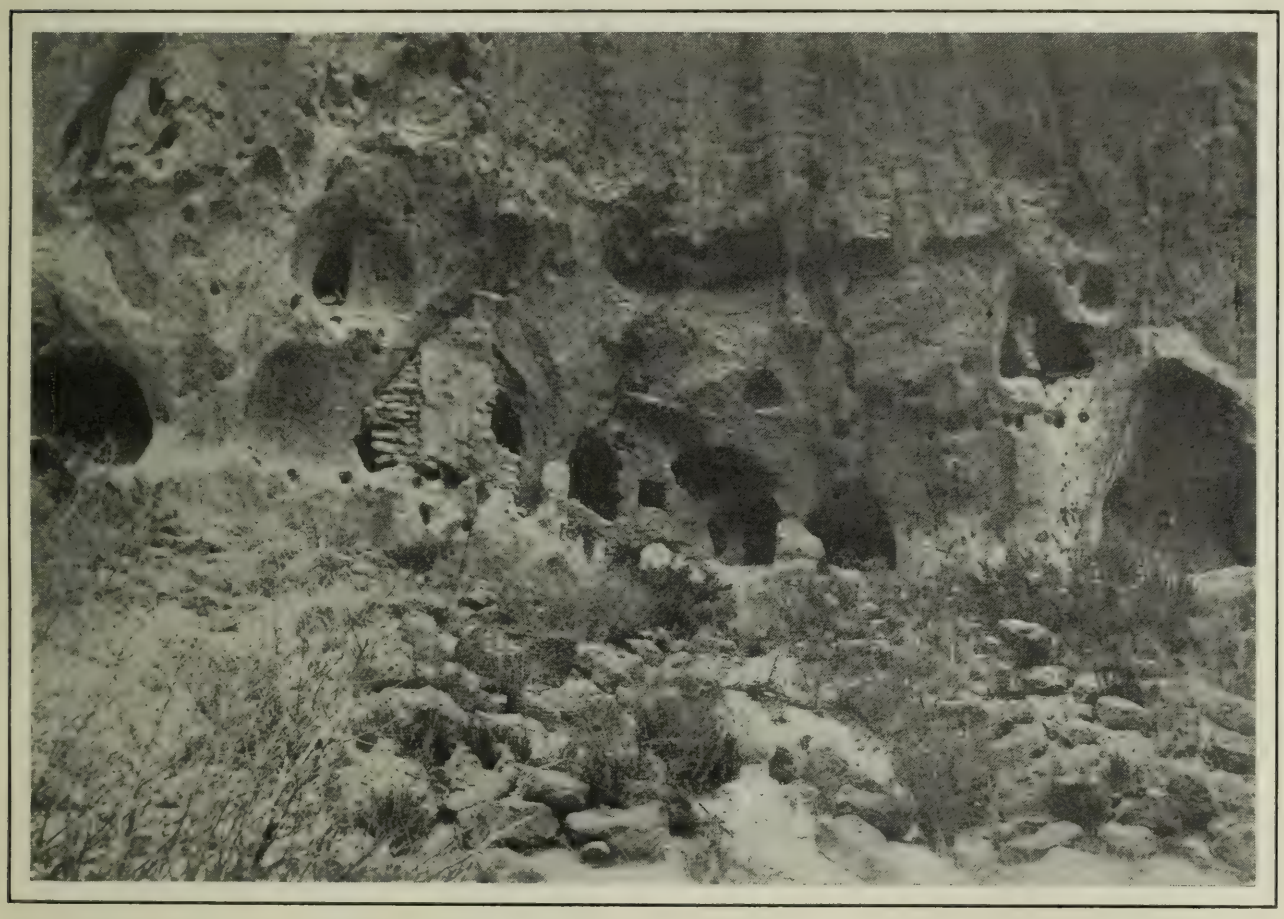
There were two of us. We were students in college and purposed to have a vacation that would be an epoch in history. We settled on a trip of five hundred miles in an open boat and a camp on a desert island far from civilization. There would be no delicacies, no books, only open air and Nature and fish. I knew a little about sailing and my chum knew it all. The boat was only eighteen feet in length, sloop-rigged and not a very good goer. Getting out of the river into the lake she went aground and we had to get out into the water and lift her off. The first day out was all that heart could wish, and we decided to sail all night. My watch was from eight to twelve. Mate's from twelve to four. By two a. m. mate had boxed the compass with that boat more than once surely and had lost both his bearings and his temper besides coming within an ace of an upset. It was the opinion of the little compass that we were headed for shore, so I put the helm over and we cruised about for daylight. Until noon we were lost; then, rounding a point to get out of a pocket, with the wind on shore, we came as near going on the rocks as we could and escape, which we had no hope of doing after we struck the surf.

Three days later, as the sun was going to its rest, we found our desolate isle. The tent was soon up and all hands turned in. Alas and alas! We had not dreamed of such a reception. Sleep was impossible. We covered our heads, roasted and smothered, got into the boat and anchored out, but it was no use. The dawn was a welcomed deliverer. Now for fish. After we had trolled entirely around the island and had not felt a single strike, the mate pulled in his three lines and there was a bass on each hook. He evidently had dragged them along some distance as they were drowned.

It rained a little that day, then drizzled for three days and poured for two more. On the seventh day our allotted time for camping had expired, and we piled everything, soaked and dripping, into the boat and sailed forth to find a dry spot somewhere, if such a thing could be reached. In a rough farm house a motherly woman put us to bed and dried our clothes while we slept the sleep of the innocent. When the deluge had subsided our little craft pointed its bow out into the great lake headed for home. Two hours later the pennant had gotten itself jammed into the main halyard block, a dangerous situation, so I climbed the mast, held on with my legs and teeth and tore out the obstruction. At noon a calm of two hours delayed us in midocean. Then came adverse winds and rain. It was midnight when the murmuring surf told of the approaching shore and we dropped anchor. The few provisions left were uneatable the next morning because dissolved in water, and we missed both breakfast and dinner. All day long we tacked in a choppy sea, and toward evening the bowsprit broke, but finally the wind died out and we settled for a seven mile row, which completed our trip as planned, at three o'clock the next morning.

I hear some one say, "That was a cat-and-dog kind of a vacation." Well, some people are not far up on vacations. They think they are vacating when they sit on a hotel veranda and talk, or stand on a dock and catch baby perch, or read some inspiring romance of freedom, wherein a woman finds it by deserting her husband and three children and running off with another woman's husband. How lovely! We sailed our five hundred miles, made a venturesome dash of sixty miles across one of the great lakes in an open boat,

were lost at sea, came within one of drowning and ten feet of wrecking, were devoured by mosquitoes, dissolved in rain, benumbed with cold, hungry and faint, but we pulled that expedition off according to plan and had the time of our lives. G. FREDERICK.



LOS ANGELES, CAL.

In the House of the Cliff-Woman.

The gentle lady who presided over the long camp-table had half promised during our first supper hour that some phantom American, some prince or priest of a thousand years ago, would walk and perchance talk with us if we unrolled our blankets for the night in the cliffroom well up in the overhanging canyon wall opposite.

No marrow-chilling encounter occurred, however. The light on the floor that traveled in reverse course as the moon wheeled up over the mesa's rim and on into the west was ghostly pale, but inarticulate; while the barking of the great owl that awakened complicate echoes on the bare escarpments of the gorge, while sufficiently articulate, was modern and embodied. Both were a bit spookish, but not of the type we especially craved. The splendid Navajo rugs that covered us could, in any waking hour, raise the apparition of primitive spinners and weavers and stately wearers now for a full score of generations resolved to dust, but after nightfall their soft fabric was conducive only to dreamless, untroubled slumber. Cliff-wraiths were elusive.

We were drinking brook water from snow mountains—where the Rito de Los Frijoles cuts its deep gorge down thru the Jemez plateau in northwestern New Mexico—and tramping all day over the tableland that was once more populous than any section of the territory today. Pueblo ruins and mounds dot all the ridges that lead down from the higher mountains to the deep cut of the Rio Grande. Arrow and lance points of obsidian and porphyry, with drills and awls and firestones, lie scattered along the wash beneath each mound. Here and there a prayer-plume holder or tiny receptacles for sacred meal and medicines may be recovered. Fragments of pottery with true lustrous glaze bear indisputable evidence that the cliffmen practised arts their children, the modern Pueblo Indians, have long since lost.

CAVE DWELLINGS OF THE RITO DE LAS FRIJOLES. .

Down on the floor of the canyon is a great communal city, now partially excavated, and in its ground-plan reminding one instantly of the Roman Coliseum. The radiant rooms, many circles deep and many terraces high, built of shaped tufa blocks, form one of the most interesting of American antiquities.

"Myriads of people have lived and died hereabouts — certainly among them all there should be a few restless spirits, uncontent with quiet

residence in the limbo of cliffmen departed. If they could only be 'spoken,' what interesting facts they might give us concerning the doings and gossip of the canyon some time since."

The doctor seemed just a trifle impatient at the failure of the former residents to fulfil their duty as cicerones.

"Let us live up faithfully to our part in the matter at any rate," I replied, "and give them every opportunity." So night by night we climbed the ladder, fitting into groves that prehistoric ladders had worn, to our well-appointed house, with its lava grinding boards and pestles in the meal-bin, its flintstones and tinder near the fireplace. A ridge in the floor indicated "but and ben" in a way to delight the heart of a Highlander. We slept "ben the hoose."

Here the mother-chief guided the affairs of her cliff family. When her daughters were married new rooms were scraped out of the soft sandstone, plastered and equipped with the simple outfit then necessary—perhaps the groom brought it into the family as part of his trousseau. When the available cave room was exhausted and still other husbands were acquired, other rooms that are now a bank of tufa-block débris along the cliff-face were built in terraces in front of the cavate dwellings. In this, her "castle," the matriarch nightly gathered her brood—may their slumber have been always as refreshing as ours in her house tonight!—and from it she carried them forth and buried them on the knoll beneath the great pines yonder, and was in turn carried thither herself—how long ago!

To me the American past is a region quite as fascinating for vacation excursions as the European or Oriental past. And the perfect climate of the Southwest is far more recuperating.

A. P. VAUGHN.

LAS CRUCES, N. MEX.

Vacation in a Kitchen.

John was going to Europe, and, as the American Banana Company paid his expenses and did not offer to pay mine, why, I must content myself at home. What should I do for six whole months? Had I always been strong enough to do my own work I might easily have laid by the cost of a trip to Europe, but I could only hope that the money had been some good to the thirty or more girls and women who had helped me in one capacity or another, and wish I had a present to give each to show my gratitude to them, and then I would wonder if I had a single friend among them, and was glad to count a few of whom I felt sure, tho circumstances kept us apart except for a brief electric touch now and again. I had not been the most efficient mistress, and often and often had wondered how it seemed to be the other party; now I would find out. So I took John into the secret, and after a week's visit to Aunt Sophia in another State went into a minister's kitchen, agreeing only to cook. The house was perfect except the servant's sleeping room, which was small, with only one window and the back stairs, which were winding, steep and dark. It was not always easy to keep my proper place, but I tried, and the work was less difficult as I became accustomed to it. The mistress was an angel, young, beautiful and always kindly. The main requisites for a good mistress are promptness in payment, faithfulness in doing her share, and truthfulness of character, and in these things she never once failed whatever my shortcomings. How I loved the children! Sometimes I wonder if the couple who came to be married when all five of the ministers in town were away from home and were obliged to wait for a train are yet united. Before three months passed I had to give up the venture, but was satisfied with the experiment, and Milady's sincere "I like you" makes one of the sunny spots of the past.

MRS. G. D. E.

BROOME COUNTY, N. Y.

A Typewriter's Vacation.

Overwork had brought on its usual results. I was nervous and irritable. The nights were spent tossing to and fro on my pillow, falling into a heavy sleep toward dawn, from which I wakened unrefreshed. I had no appetite, and what little food I could take refused to assimilate. I looked at the heaped-up work on my desk with a sigh.

Clearly I needed a vacation. A sea voyage or a trip to the coast would probably be what the doctor would prescribe, but I could not afford either. My earnings are not large at any time, and for the last month the outlay for medicine and doctor's bills had exceeded my incoming revenue.

Something must be done, but what?

Picking up the morning paper, I glanced over the columns. There I found the following advertisement: "Light, pleasant work; good wages; no experience required. X. & Co., No. 7 River St."

I sallied forth. A half hour's ride on the street car brought me to the factory district. After some trouble I located the object of my search in a large brick building near the river's edge. Making my way to the office of the building, I found several others there in search of work. To my statement that I had come in reply to their advertisement, the one in charge informed me that the work was picking strawberries—i. e., hulling them—that our wages would depend upon the rapidity with which we worked. They paid one cent

a box, sixteen cents a case; a good worker could make from a dollar to a dollar and a half a day. Seeing that I hesitated, he added, "If you do not like the work you can stop at any time."

After thinking about the matter very carefully for a few moments, altho it may have seemed longer, I thought I would try the experiment, so I followed the guide and other applicants upstairs. We were ushered into a large room with many windows. After removing our wraps we seated ourselves at a long table, a number of which were in the room. An auburn-tressed young woman with a complexion that a belle might envy took our names and brought each of us a case of berries. Large crocks in which to place the berries after they were hulled were set at intervals down the table.

The windows were wide open, and the fresh morning air poured into the room. Boats steamed past so close that it seemed as if we could touch them with outstretched hand. In one corner of the room were several immense cauldrons where was brewed not "toil and trouble," but strawberry jam, if one could judge from the odor, for a delightful fragrance filled the air. A white-capped cook who gaily hummed an air would, now and then, run up a short ladder and peer within.

I soon became interested in my work and entered into a contest of speed. While I hulled the berries I endeavored to make the acquaintance of my fellow-workers. They were of different ages, half-grown girls, maidens, young matrons, old women, all dressed plainly, but with neatness. There was one white-haired old woman with pink cheeks who was a perfect picture. In conversing with the others I found out that she was one of the fastest workers in the room—could hull 32 boxes in an hour.

After a short rest at noon we resumed our labors and worked until the supply of berries gave out, which this day happened to be about three o'clock. In this work there seemed to be no fixed rules as to going and coming. I inquired of the aforesaid auburn-tressed young woman who kept account of the number of boxes we picked over, and was informed that she was no boss, that we could do as we pleased. We could collect each day for our work, or wait until the end of the week just as we chose.

The berry season did not last long, much to my grief, for I seemed to gain every day. There was actually no worry connected with the work; the mind was given only enough occupation to keep it from preying on itself.

After this I essayed various other branches of hand work, wrapping gum, labeling, etc. My last experience was quite strenuous, the hours of work being from 7 a. m. to 5.30 p. m. The factory was located about twenty blocks away, and I walked both going and coming. The doors of the factory were opened at 6:30 a. m., and when the janitor unlocked the door he usually found me waiting on the step. I shall never, I am sure, forget the delight of those early morning walks thru the deserted streets. Several times when I started out the moon was still shining; then it would gradually fade away as the eastern sky took on the rose and gold of dawn. Then the long walk home, in the twilight after the day's work was o'er.

THE CREEK WHERE WE CROSSED.

The sheriff is on the bridge with a member of our party, not in his arrest, however.

I shall have to admit that after ten hours of labor and a pedestrian tour of forty blocks I was physically exhausted. And the sound of the machinery, which in the morning was a pleasant hum, before the day was over seemed to crash down thru my brain. My only object in life after I got back to my room was to get to bed as soon as possible. But oh! such sweet slumber! If I wakened at all it was only to feel such a delicious sense of repose, then off to sleep again.

After several months of such work I felt able to return to my own line of work. And I doubt if a sea voyage would have done me as much good, physically or mentally, as simply a change of work, while my outlook on life was broadened by a fuller acquaintance with my fellowman.

Minneapolis, Minn.

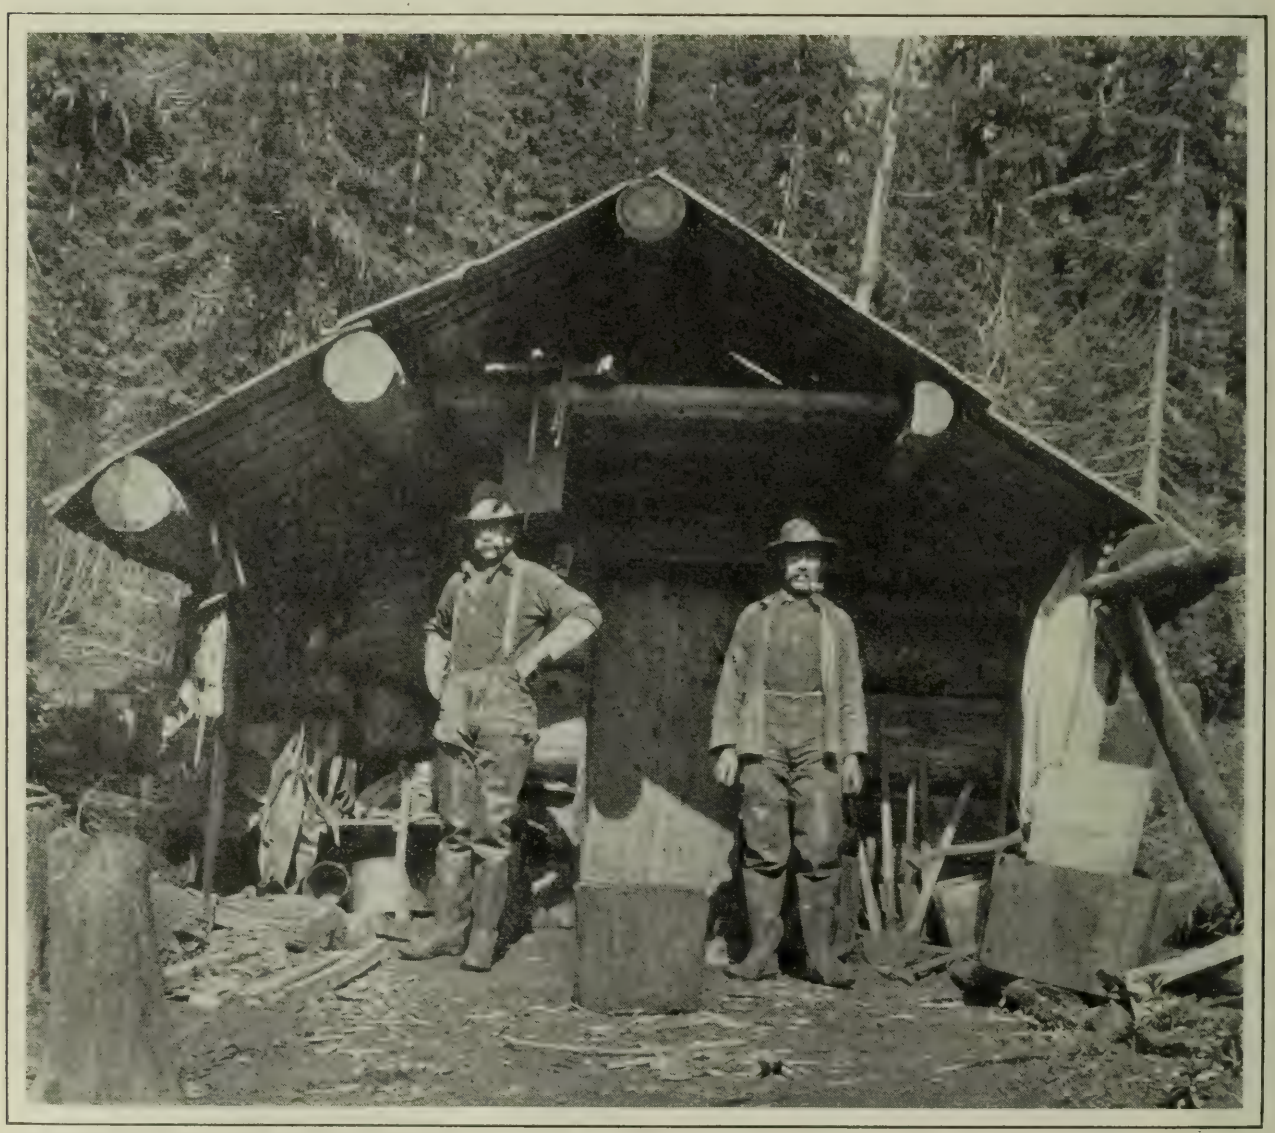
A Story with a Moral.

I do not on general principles approve of stealing, but one of the jolliest times I ever had was raiding a watermelon patch.

One night late in summer a party of young people were gathered at the home of my uncle.

When tired out with games we sat down on the porch steps to rest; one of the boys said, "All we need now is a good watermelon." "Let's go and rob Joe's patch," another suggested. It was known all thru the neighborhood that Joe raised fine melons, but it happened that no one in this party knew where he had them planted that year. Joe thought he was safe in saying that if those of the party who were planning to rob him could find the patch, they were welcome to all the melons, if they wanted so many. This was said rather in the manner of a dare. Up to this time no one had thought seriously of going, but now some of the boldest spirits prepared to start. In vain the more prudent tried to dissuade us, but our hearts were set on having a lark.

Our pilot was a boy who was well acquainted with Joe's father's farm, and so had a pretty good idea where the melon patch might be found. The moon was shining, so we had no difficulty in following the road and crossing the creek on the rocks below the footbridge. One house on our road was that of the sheriff. This we passed in perfect silence, in mock fear that we should be arrested. After a walk of about two miles we reached the corn field in which the melon patch was supposed to be. The girls climbed on the fence to wait while the boys went to hunt the melons.



After what seemed to us watchers on the fence a long time, our heroes returned victorious, tho their faces were badly scratched by the corn blades. They carried two large melons which Will, who was an authority on the subject, had pronounced ripe after thumping them with his thumb and finger.

The melons were cut with great ceremony and pronounced to be delicious, altho one of them was pretty green. After we had finished eating them we carefuly hid all the rinds —except the pieces that we carried back as trophies—so that the existence of the melon patch might not be betrayed to others who should pass that way.

A platform was now improvised, and one of the girls recited "Seein' Things at Night." After this we returned to my uncle's, but not with such light steps as we had set out. As a result of the escapade several of the girls were unable to attend church the next day.

GENEVIEVE LAREW.

GREENVILLE, W. VA.

THE TRAPPER'S CABIN.

The extended roof is for protection from the deep snow.

THESE ABORIGINES ARE THE AUTHOR AND HIS FAMILY.

Trapping in Montana.

Trapping for furs and prospecting for gold, in many instances, go hand in hand. The trapper traps during the cold months, when furs are good, and when spring increases the mountain stream to help him his hunter's eye has frequently located a "placer," "diggings" or "prospect," where he spends his summ s, sometimes very profitably. When he comes out of the mountains with furs he buys a "grub stake," and returns to come out again with his "diggings," only to return with another supply of food for the winter's trapping. The hardships, exposure and isolation of a trapper's life are hard to realize.

"Jack" is a trapper in the Clear Water country in the mountain range that divides Idaho and Montana. He is a tall, powerfully built German, weighing 210 pounds and measuring six feet two and strangely adapted to the life. He is a valuable friend, possessing a fine head, good heart and a trace of early religious training.

Several log cabins to be built is the first step; seven or eight in number, about eight miles apart. A supply of wood is laid in at each cabin, then a return trip to town for the winter supplies, consisting of food, ammunition, steel traps and, in this case, reading material. This supply is carried from the nearest railroad point on pack horses and distributed among the cabins. The horses are then brought out.

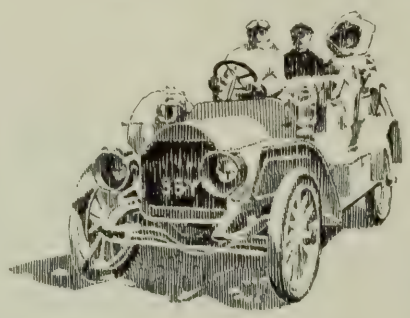
Now all is ready, and back into the mountains goes Jack for the long winter. He hates to go, yet there is the magnetic pull of the mountains, and once started he is happy, happier than elsewhere. It is sixty miles over the narrow, winding mountain trail ere he reaches his first cabin.

The traps are set and baited. It takes, on the average, ten days to make the circuit of the cabins, relieve the traps, reset them and stretch the skins to dry. This trip is made partly on snowshoes and partly on skis. The snow becomes very deep.

Bear, mink, weasel, marten, lynx, wildcat, mountain lion, beaver, otter, coyote and timber wolf are caught in these snares. Sometimes a bear or other animal is met in the trail; then a Remington automatic No. 35 does the work. The wild animals rarely attack a human being, but are fearless when molested or cornered.

VICTORIA N. HARTLEY.

QUARTZ, MONT.



In a Canoe.

I think no outing will afford so large returns in pleasure for so small outlay of money as a canoe trip on one of our inland rivers. Last summer two companions and myself spent two thoroly happy weeks in a trip of this sort. We started on a small branch of the Scioto, entered the Scioto at Columbus, followed it to Portsmouth, and from there went down the Ohio to Cincinnati. Our outfits consisted in a flannel sleeping bag apiece, two large rubber blankets, buckets, tin cups, plates and spoons for each, and fishing tackle and rifle. We

did not attempt to carry large amounts of supplies as the small towns were plentiful and we could purchase as we needed. We made our trip in a leisurely fashion, lingering in the pleasant camping places or good fishing holes. By having three in our canoe, we could alternate so that no one need paddle until the exercise became disagreeable.

Do not think that the trip grows monotonous. The ripples occur quite often enough to keep up the excitement. Shooting a swift rapid in even a small river is a matter that requires a clear head, steady hand, and some skill at reading the stream bed from the face of the current. One learns to keep the canoe head in the swiftest, roughest looking part of the stream, for there the channel is clearest. One must watch for counter currents, remembering that the minute the canoe gets broadside over it goes. There is a tremendous drop in some of these streams, and the canoe shoots along at an amazing rate, while the steersman must sit with every faculty alert to deal with the unexpected features.

On my first canoe trip I made the mistake of paddling with arms and legs exposed, and in consequence was soon actually suffering from sunburn. Since then I prefer to wear light shirt and long trousers. Have also learned by experience to cut down the outfit to actual necessities for the many portages around dams make a heavy outfit a great nuisance. Two years ago my wife went with me for a two days' trip down the Great Miami. I am sure no school boy would have gotten more fun than she did out of "roughing it." As she is only an indifferent swimmer, we made her doubly safe by having her wear a life preserver when shooting rapids. We had one spill on this trip, but the sun soon dried our clothes and the episode only added to the fun.

If the nights were too damp for outdoor sleeping, we could always obtain permission to sleep in some one's haymow. A jolly trip we had, full of good sport, and rich in health returns. J. W. PAGE.

DELAWARE, OHIO.

A Veranda Vacation.

It is my firm belief that the maximum of profit and pleasure at the minimum of expense may be had by a veranda vacation.

Last summer circumstances prevented leaving the city even for an entire day. So we determined to make the best of what we had —a veranda. It was provided with awnings and held several large comfortable chairs, a hammock, and a small table. Whatever breeze there was came that way, and, even on a close day, we had no room so comfortable.

As soon as the necessary morning duties were ended—and we lived the simplest of simple lives, we appeared on the veranda with papers, magazines, writing materials and sewing. Here we remained in peace and comfort till luncheon called. In the heat of early afternoon, the hammock invited for a nap. Later, tennis, a walk, or a trolley ride furnished change and exercise. After dinner we found the veranda ideal for dreamy dozing or sparkling conversation—as the spirit moved.

On the veranda we received our callers, interviewed marketmen and agents, prepared the dinner vegetables. The children reveled in a large sand box on the ground to the right, and a place to dig and shovel for a small garden on the left. These did not add especially to the beauty of our tiny front yard, but kept the youngsters happily occupied. Rainy days they had their toys on the veranda.

Absolutely the only extra expenses we incurred were the fees we paid for renting the latest books from one of the department stores, our magazine subscriptions, and the trolley trips, which included frequent visits to the public library for various works not new, which we had never before found time to read.

At the close of the summer we took stock, as it were, of our assets. Perfect health, the natural result of many hours of sunshine and fresh air combined with a simple diet; rested nerves, due to the absolute freedom from worries; neglected correspondence and other writing literally brought up to date; the family sewing and mending in better shape than ever before; a most satisfying remembrance of all kinds of desired reading accomplished, and a pocketbook almost as plump as on the 1st of June. Never before had we so much to show for a vacation. A. K. M.

NEW YORK.

Alaska Hunting.

A son of ours spent several years hunting and trapping in Alaska, 300 miles northeast of Dawson, near the Stewart River. He had fine hunting, altho he had to give most of his time to the trapping business.

The Alaskan moose is the largest of the deer tribe, going up to 1,000 pounds in weight. In the fall he wanders in small herds of five or six among the timber of the mountains. In summer he seeks the swamps and swales for cooling off.

The caribou ("Megaleep" of the Indians) prefers a traveling herd of over a hundred. The huntsman goes above the timber belt after them in the spring. When they make their winter crossings on the ice they lift their feet, like high-stepping horses, over three or four feet of snow. The megaleep leaders keep a funny kind of school for their youngsters, teaching them to jump and to follow their leader! The native sleigh dogs are no good in hunting caribou. They only frighten them away; so they have to be left well tied up.

Years ago when food was dear in Dawson a couple of hunters made $1,500 in two months from their caribou. They are easy game when on the high ridges.

Hunters find it a trick worth knowing to have the foresight to locate the moose licks beforehand. In this way eight were killed in a short time just below the falls of the Stewart, a hundred miles above the McQueslin.

It's in the fall that the easy money is made. The moose seem to come to you then. You watch by a lake, or the borders of a swamp, thru the night. The moose come there to feed; you knock them over. That's all there is to it!

Hunting in this region seems, my son says, "to many a kind of play-work. When one considers what a single well-aimed bullet may bring down in dollars and cents, it is pretty inviting, to say nothing of the sport!"

The "mountain-sheep" has to be hunted among the highest mountains, and for its rarity it is all the more eagerly sought.

LOUISA A'HMUTY NASH.

NASHVILLE, OREGON.

Canoeing on the Canals.

The worst of a vacation is that you have to decide upon where to go before you go, and the best of it is that in trying to reach a decision you get more fun than sometimes you find in the actual experience. We traveled from Maine to Florida, and from the Atlantic to the Pacific (thru railroad folders and summer books), and before we were thru we were veteran tourists by land and sea. Then we dumped the free literature in the waste basket and said, "Let's go canoeing."

A canoe is the cheapest vehicle for traveling (for it eats neither gasoline nor oats), and the easiest for shipment and transportation (even the canal companies cannot exact toll from it if you know how to avoid the tax), and the most satisfying from a health and pleasure point of view. But you can't go to sea in a canoe, and you can't take a coastwise trip in it, and on many of our large rivers a canoe journey is fraught with danger.

We had no intention of repeating the story of the "three men in a tub" who went to sea without compass or chart. Somebody had been telling us about one of our old abandoned waterways—no, not abandoned, but so near to it that you sometimes needed a microscope to find any life on it. The patient mule was still there; the tow-path with its moss-covered border; the ancient canaler with his corn-cob pipe and high top-boots, and the dilapidated ark which seemed as much out of date in this age of steam, gasolene and electricity as the horse cars do in one of our large cities.

A canal has a queer way of roaming about the country in the most picturesque style, meandering here and there to avoid obstacles, and apparently taking the longest route between any two given points instead of the shortest, thereby proving that it is not of this day and generation. Our canal was so crooked that our compass seemed to make a complete circuit of the horizon every hour. But there was rest in the very thought of taking circuitous routes. We had been chasing the

THE MOUNTAIN SHEEP.

elusive train for so long that it was a mental relief to find something that never even remotely suggested any form of rapid transit haste.

We loaded the middle of the canoe with a small canvas tent, a camping kit of cooking and carving implements, and a few extra clothing and some provisions. When fully loaded the craft weighed less than seventy-five pounds. Unfortunately all canals start from some busy town or city and take in all the other towns and cities on the way, but between there are Elysian scenes which make the heart glad. Our canal was fifty miles long, with another extension of forty miles. Two weeks of paddling up it meant vigorous exercise or lazy idling by the way. We took the latter course and pitched our tent wherever we pleased and stayed until tired of the monotony of doing nothing.

A canal has no tide; therefore it is eminently adapted to canoeing. It has no waves, and the wind does not affect it. It roams thru towns, where ample provisions can be obtained, and consequently you are never far from your base of supplies. It meanders across country, where your good farmer can be depended upon to furnish you with fresh milk, eggs, fruits, vegetables and chickens. Famine and starvation are unknown factors in the case. A canal abhors a hill or elevation as much as nature abhors a vacuum, and it will travel many miles out of its course to get around any kind of a rise. But if it must climb an elevation it does it quickly and in the shortest time possible. When you are locked up a canal or hauled up an inclined plane by one of the primitive cable railways you don't think much of the climb (that is, if you don't have to pay the toll out of your own pocket, but if you climb up the elevation with your canoe on your shoulders you appreciate what every foot to a mile means in railroad vernacular. We climbed twenty locks and inclined railway planes in our vacation trip of two weeks, and at the end we were stronger and healthier for it.

We found the lock-tenders were prejudiced against canoes. Motorboats and canal-boats went through the locks in the conventional way, but we climbed up the locks and paid nothing for the privilege. "Here, youse, that's against the law!" was the repeated warning. "What is?" we asked. "Youse got to pay." "For what?" "Why, for going up the canal." The canal is a public highway between locks, we informed him, and all kinds of boats had a right on it. "Yes, but you can't go thru the locks without paying," was the reply, accompanied by a dubious scratch of the head. "No, that's so, but we didn't go thru the lock. We went around it."

We soon found that this argument went, for there was no ground on which the company could tax us. That is a legal point that has been abundantly threshed out. After a time we pacified some of the more obdurate lock tenders by giving them a quarter to help us up with our canoe. Once we came up against a series of three inclined railway planes together, one succeeding another so fast that our courage forsook us. We got up those planes for half a dollar by waiting for a canal-boat whose captain consented for the aforesaid half dollar to load the canoe on his craft and lock it up with his own boat. The lock attendant didn't see the trick at first, but finally he complained, "Say, youse goin' to pay for that canoe?" "Pay for nothing," snorted the canaler. "That's part of my cargo." And cargo it went, but the lock-tender never seemed sure of his point.

We pitched camp every night at some attractive point under the trees and hauled our canoe out of the water. One night it rained so hard that our tent leaked like a sieve, but

A BAD SPILL.

we crawled under the canoe and escaped drowning. Once we struck a snag in the canal and punctured the canoe. We were delayed a day in patching up the hole with canvas, gum and some good cement. So long as we stuck to the canal we had no accident, but at one point we took a side trip on a lake which furnished the canal with its water, and we had a nasty spill in deep water. But we were good swimmers, and righted our craft and swam ashore with it.

Tired of paddling, we tried the mule act, walking the tow-path with all the patience and sobriety of the afore-mentioned animal. It was good exercise for the legs. On one stretch we hitched up to a canal-boat and covered five miles for a quarter. At another time we were short of provisions for dinner and were very anxious to reach a town where stores could be found. A motorboat chugging thro the canal gave us a line and carried us to our destination within half an hour.

We met several other canoeists bound in the opposite direction. We stopped long enough to exchange experiences. Once we exchanged something more than courtesy. We had our camp pitched, and dinner was nearly ready, but our cook had overlooked the sugar. Now what is good coffee without sugar? Just then we espied a canoe rounding the bend of the canal, and we hailed it: "Hello, got any sugar aboard? We've got coffee, but no sugar." There was a hearty response: "We've got sugar a-plenty, but no coffee." "Come ashore, then, and have a cup." They landed and spread their lunch on the ground. We had roast chicken; they had green corn and some baker's fresh pies; we had delicious coffee and marmalade; they had pickles and olives. Well, the remembrance of that combination lunch makes the mouth water at this very minute!

High bridge and low bridge meant nothing to us. We traveled as free as the bird. We drifted or paddled as the mood seized us; we stopped to pick huckleberries and blackberries by the way; we studied the birds and squirrels which in the early morning visited us. One day we saw luscious watermelons in a farmer's fields. We asked to have one. "I'll give you as many as you can eat and carry away in your canoe if you'll help me with my haying this afternoon." His hired help had deserted and a storm was threatening. We made hay that afternoon and pitched and raked until our backs were bent. We earned the watermelons, and we did not hesitate to exact full payment. We ate three, spoilt a fourth, and carried five mammoth ones away in our canoe. "Hope they'll taste good to you," the farmer said good-naturedly as we left. We promised to return another season at haying time.

We snubbed through the canal and got back home on time with an abundance of reserve strength and sunburn. As we compared notes we tried to make out the exact cost of the trip. The canoe cost us $25; the small camping tent, $5; the culinary and cooking equipment, $5; tips, bribes and canal lock tolls, $2; fresh chickens, eggs, milk, and fruits and vegetables for the two weeks, $5; dry groceries and other provisions, $6, and miscellaneous items of a minor nature, $5; total, $53. That meant about $26.50 for each one, or $13.25 per week. The canoe, tent and camping utensils are good for several more such trips. So, after all, the outing trip was about as cheap as one could make it.

Our trip was up the Morris & Essex Canal crossing New Jersey. Another season we shall try the Raritan River and Delaware Canal, and possibly the Chespeake Canal. But for that matter there are a dozen canals on the Atlantic coast to explore, and we practically have our summer vacations mapped out years ahead, and when we exhaust the canals we will take to river canoeing. In nearly every part of the country there is some canal or small river suitable for canoeing, and any man or woman casting about for a favorable place for spending a vacation could do no wiser than to repeat our experience. Go canaling by canoe if you want health, happiness and a good summer time!—only don't forget the tent and cooking equipments.

GEORGE E. WALSH.

NEW YORK CITY.

With the Indians.

Last year (1909) I rode in from East Clallam on the Strait of Juan de Fuca over a "Puncheon" road to LaPush, Washington, on the Pacific coast of the Olympic Peninsula. Thruout the day we had been engulfed in giant timber which must be seen to be appreciated; but as the sun was going to rest for the day we came out to the village beach of LaPush and there beheld the blazing disk of light giving back its sparkling rays over the placid waters, a sight worth going the whole distance to behold.

Arriving at the place, we found ourselves in the Indian village which is situated there. It was Sunday evening, and we went to the Indian "Shaker" meeting, a Christian service of the crudest type. There in a tight, closed room we saw the Shakers performing. Candles and a cross were on view. But the services! A big, fleshy woman was chanting, "Hi, hi, hi," and all—some seventy-five or more—were vigerously stamping the floor as they waved their hands in gyratory motion, shrugged and contorted their bodies, wried their faces and muscle-trembled in a self-hypnotized condition till the perspiration poured down their practically nude bodies and formed in pools on the floor. And by this performance these simple-hearted folk expect to gain entrance to heaven.

The night following our arrival we also visited a medicine performance. Part of the medicine people were shaking as we had seen them doing at the "church"; but one old medicine man was dipping his hands in water and doing a crude massage on the sick one. It seemed to be a case of heart trouble. Finally the medicine man took his knife and cut the skin in a circular ring about as large as a plate over the heart region. Then he began to suck on the

afflicted parts with his protruded lips as the blood besmeared his face. Suddenly he jumped to his feet as he gripped his hands tightly together and exclaimed: "I've got it. I've got the 'Skokum.' I've got the sick." Then he showed us some hard, black substance of considerable size between his fists. It was a black something, but what? This the doctor burned in the room fireplace, and the patient was well at once—Indian science, if you please.

A telegram called me home the next morning; but I never have regretted the trip.

ALBERT B. REAGAN.

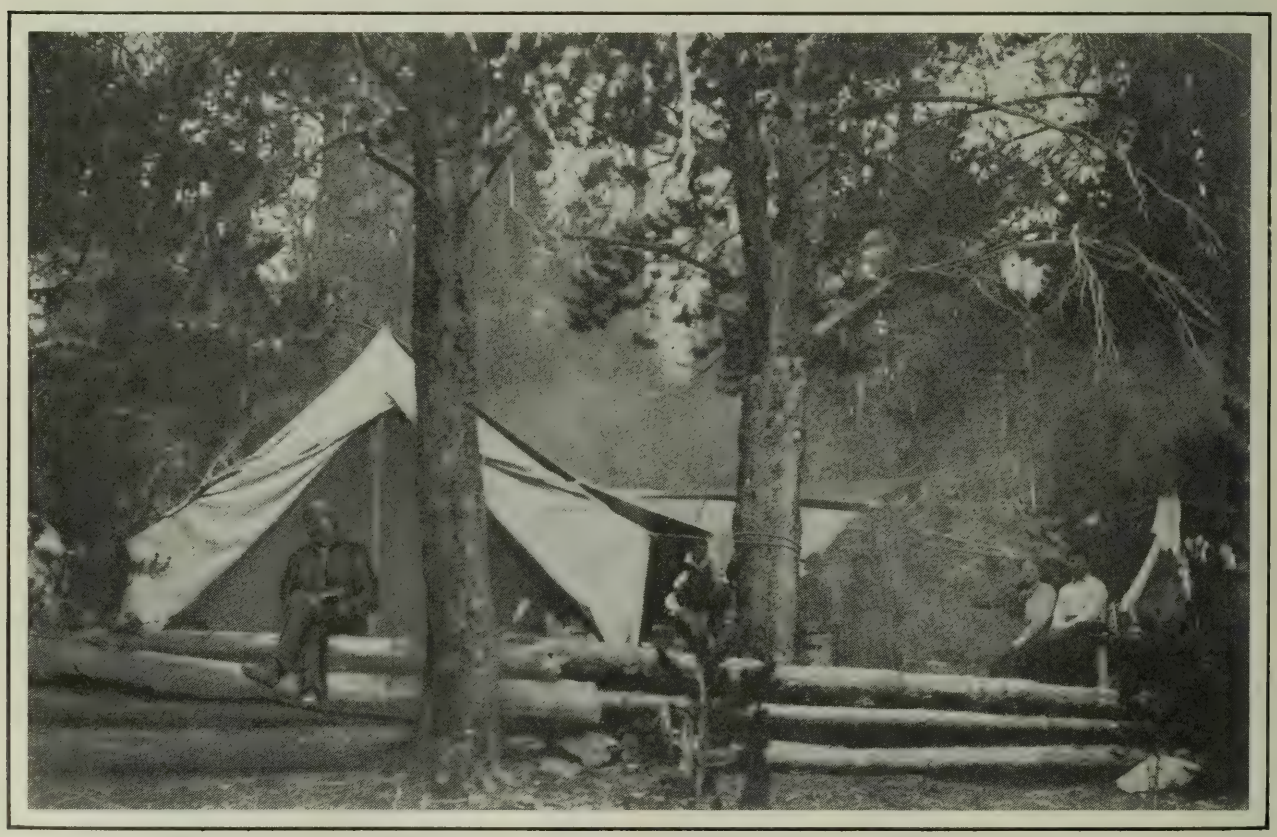
NETT LAKE, ORR P. O., MICH.

On a Mountain Shelf.

On the western slope of Mt. Gabernash, in western Colorado, in the foreground the Frazer River, in the distance the Continental Divide over which we rode in our search for a vacation ground, is a shelf—not of wood nor of stone, but formed by digging into solid old Mother Earth.

This shelf for eight weeks was the home of an even dozen vacationists.

We had three sleeping tents, one cook tent and a dining-room "fly," which sheltered our long table very well in sunny weather. One evening as we were eating a heavy rain storm came up. At first none thought of moving, but when the rain soaked the bread and pudding each took the dish he liked the best and crawled under the table. On nights like this the dishwashers were to be envied.



Right here a camping-out idea: Select the dishwashers early. I belonged to the supper squad. Many a night we washed dishes until half past nine—not because of the lateness of the supper, but of the songs and mock melodramas with which the proceeding was embellished, soubret and villain being the favorite characters of the impromptu performance. Barn dances, waltzes and polkas were performed with dish pans, plates, dish towels or buckets of water, always ending in great hilarity.

Another idea: Doing the camp work is not difficult if it is systematized. In our camp each had his day's duties—and no more. Even to the weekly washing, which was done in a "nature's washtub"—a circle of boulders in the middle of dashing, foaming Frazer River—we planned our tasks. It would have astonished some society friends to have seen us, barefooted, cleansing linen at the river—but we played we were French peasants, and what fun it was!

Nearly every evening after "dishes" all went down to a grassy park in front of the tents and built a large campfire. When we had no company college songs were well mingled with hymns and popular airs.

One night all other campers for miles around were invited to our campfire. An extra supply of food from Denver had come in by freight that afternoon. As the boys had been on a tramp, they did not feel like packing it over the trail from the station and intended to leave it until the next day. When our guests came by the freight house they saw the food, so brought it—all except a box containing forty-eight cans of condensed milk which broke on the way.

When the fire burned low the old standby,

THE CAMP.

the Virginia reel, was started. Our musician played until he had no more breath, then each, singing to the tune of "John Brown Shot a Little Indian," "Up and Down in the Old Brass Wagon," etc., danced until his feet lagged on the ground. Dancing downhill is delightful; dancing up hill can be endured only because of the reward it brings when the turn is made.

When our tents were packed we figured up the cost and found it to be about $32 a person, not including railroad fare.

We reached home in good spirits, with vigorous health and in splendid condition to resume school work. RUTH HARGER.

ABILENE, KAN.

Rattlesnakes.

The scene of my snake story is near Connell, Wash., and the time, June. In this month one finds the rattlers out basking themselves in the sun more than in any other month. (The warmest spot on the hottest day is not too hot for them.) Later in the summer the rocks become warmed in the interior, and this affords the rattler warmth without having to seek some flat pedestal near his den, upon which one often finds him in a coil, motionless, as if dead to the world. But upon approaching he soon warns you to keep your distance, which you invariably will do. However, he is not as vicious as many people think him nor will he bite unmolested. He will usually give his alarm to warn you of his presence, and then stealthily crawl toward a crevice or place of protection. He evidently seems to know that his sudden rattling at your side, often quite unexpectedly, gives you the shivers up and down your spinal column, and thinks that punishment enough for disturbing him from his sun bath. Should you, however, further molest him by trying to keep him from crawling away, then you will see him on his dignity at once. But do not let that frighten you, for he is easily conquered. In our experience with rattlers during the last four summers we have found a very simple way of killing them without harming the hide. The instruments used are a jack-knife and a broom handle, slightly tapering at the end. Two persons, each with a stick, can hold down the snake and put it in any position they wish. The head of the snake is turned, with lower jaw up and upper part of head below. Then by prying back the lower jaw (which is above now) you can see the backbone of the snake just at the neck. This can then be cut—and the snake is harmless, since its head will then hang limber, being separated from the spinal column. Or if you do not wish to go to that trouble, simply hold down the snake's head with the stick and take it by the tail with the other hand, and at the instant that you are ready to snap it, loosen your hold on its head and give the body a sharp snap. You will find its backbone broken about at the same place where you would have cut it according to the above method. This may sound fishy to some of the readers of THE INDEPENDENT, but it is not. It is a true snake story. During our last summer's vacation we killed over 100 just this way, and tanned them. There are any amount of uses to which the tanned hide can be put, but the most popular with us was to make hat bands of them, crossing the mounted head and the rattler on the left of the hat. The flat hide, with the head stuffed, all mounted on green felt with a brown felt-fringed border, makes a most beautiful specimen and can be sold for eight or ten dollars.

THE SNAKE HOUSE.

I must not fail to mention the charm and pleasure that rattlesnake hunting has afforded us during our off days on the wheat ranch where my brother and I and college chums have spent part of several summer vacations. It is not only exciting, but I have found that it teaches one alertness to scale a rim of rocks in search of rattlers; sometimes coming almost upon them before seeing them, and often not seeing one until it has rattled. It is a common thing to happen on a group of them, nestled together like a family of kittens.

The accompanying photo shows us at the front door of our snake house, or rather our taxidermy house, just after returning from a snake hunt.

NOTE.—Washington and Oregon do not have the large variety of rattlesnakes as one finds them in Mexico and other points. The largest here are about 55 to 60 inches long.

A. E. GRONEWALD.

PENDLETON, ORE.

Out for a Florida 'Gator.

We camped on a Florida hummock—Snuff, a mongrel dog; George, the ebony cook, and I. A trio of tortured conchologists. The rare Helix picta we found not, tho we delved a patient week. But, despite coal oil lotions, we were duly found by the spider-legged ticks that clung to us most tenaciously. The microscopic scoundrels, the red bugs, too, flew aboard us, and founded scarlet colonies 'neath our skins.

Today, however, we were to enjoy a respite. "Going 'gator hunting this evening," I informed my colored companion on the afternoon of the 3d of July. "Yassah." By five the burnished tins and pans shone resplendently on a fair magnolia. Far out of reach of marauding razor backs. The crackers, corn beef and cheese, too, were stowed where racoons, skunks, 'possums and the wild cats could but smell them.

We left camp early. Waded and scrambled alternately for a painful mile. No rattler sounded warnings from the riled pools that skirted the thorny path thru the undergrowth. Ever and anon, however, a stubby moccasin slid out of our way. The wicked kin of the cobra, the Florida coral snakes, stared insolently when we brushed past their palmetto coves. Neither species, however, dared venture within range of our mahogany saplings.

We arrived at the lake at nine o'clock. Thomas Mackay, a Northern friend, was already beside the skiff. "Have been on the lookout for you the past hour," he informed us. I handed him my gun, bidding him be cautious because it was loaded. Thomas examined the charge. Then peevishly inquired if bird shot would smoothen the ruffled hide of a 'gator. "Empty the charge into a 'gator's eyes," I said, "and we shall have the saurian's steak for breakfast."

The incredulous Thomas seated himself in the bow of the boat. The negro took the oars. I remained in the stern. The night was ideal for a 'gator hunt. Extremely dark. The moon lay imprisoned behind heavy leaden clouds. Oh, how we wished its silvery flood would not o'erflow the parapets of vapor. Stars could shine. But a moonlit night would terminate our hunt.

A few powerful strokes pushed us many yards from the sedgy shores. The bull's-eye lantern, fastened about the forehead of my companion with the gun, cast its livid shaft of light as searchingly for 'gators as do the huge patrolling lights on warships for foes. We floated listlessly for a silent half hour. How charmingly ticked into eternity these thirty minutes on Lake Jovita. I have always found Lake Jovita a piece of the sapphire sky dropped into a valley of trees. I have always found it exquisite. But never have I seen it so serene as on this memorable eve. Not even the softest zephyr was downy enough to stroke the incomparable smoothness of its features. Only now and then a dimple shone where the trout had drawn some water. We floated as in a dream.

Suddenly there came hushed tones from my companion in the bow. "There is one!" he whispered excitedly. I followed the iron finger of the gun-barrel. "Don't shoot," I quickly ordered. "You mistake the starry bowl of the 'Dipper' for an alligator." He felt chagrined. "What! Stars? Are they stars?" he queried. "Only stars," I softly answered. "But how am I to distinguish the glowing orbs of the 'gator from those diamond splashes of the bathing stars?" he pleaded. "The alligator's eyes shine like glittering coffee diamonds; golden, not silvery, they appear," came my instructions.

I steered the boat into the cool shelter of a bayou. Scarcely had I done so when glowing sparks shone beneath a distant bay tree. "Take aim!" I ordered. My companion was already aiming. Bang! Bang! reverberated the gun. Bang! Bang! thundered the echoes. Weakening bangs were still a-rolling mid the hilly lake shores when we passed underneath the bay tree and found that the gunner had shot wide of his quarry. ORESTES NEWCOMB.

THE EVERCLADES, FLORIDA.

My Worst Vacation.

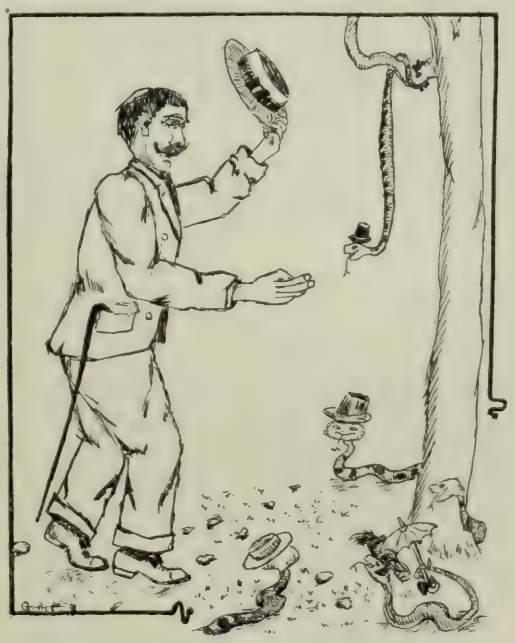
Sophomore exams. were over, and the usual query of "Did you pass in anything?" had been duly exchanged. The left-hand pocket of my blue cadet trousers contained $8.61; the right pocket, a hole. I was offered employment at my old occupation of a railroad telegrapher by the North Line on their Desert Division. This road had a bad name, especially on the Desert Division, but times were hard, and I was compelled to accept it. After an all-night ride thru a country where the sand hills when illuminated by lightning flashes reminded me of scenes in "Faust" or Dore's illustrations of Dante's "Inferno" I arrived at my destination.

I looked around. A sectionmen's house, a small railway station, a row of telegraph poles, sage brush, greasewood and a rattlesnake; not a tree or a spear of grass or growing grain in sight. My duties at the station were merely to handle train orders. No tickets to sell or freight to bill. No train ever stopped there except when necessary to get orders. It was ten miles to the nearest station one way and fifteen the other. The section men with whom I boarded brought their supplies, which were of uncertain or rather certain European flavor, from these places on their hand car. I slept in the little station, which did not even boast of a title, tho the passing siding at this place had a name which was used in train orders. Being so close to the track, of course every train awoke me. I soon learned that I

was expected to be on duty continuously twenty-four hours a day, seven days in the week, since if a night train wanted orders, as they usually did, I had to get up and get them.

I was very popular—with the mosquitoes, which were altogether out of proportion in numbers to the population of the place. The only time one could venture out without meeting their hornet-like attacks was during the middle of the day, when the wind was blowing. My bed was made of pine slabs, with two gunny sacks of hay for a mattress. I built a canopy over it of barrel hoops and mosquito bar. At night I would crawl under the canopy, tuck the edges down and, after killing a half dozen mosquitoes which had followed me in, would sleep until the next train.

Our drinking water was shipped to us in tank cars and stored in a cistern. It was hot, dirty and very strong with alkali. I made a filter by cracking the bottom from a large bottle and filling it with charcoal. After filtering the water was put in bottles and buried in the ground to cool.



Thus passed my sophomore vacation, which will be remembered long after some others are forgotten. Bs.

SCHENECTADY, N. Y.

A Snake That Did Not Run.

Of snakes I have met many, long and short, fat and slender, poisonous and non-poisonous, but most of them have, when approached by danger, in the shape of your humble servant, stuck their tails between, 'pshaw! snakes haven't any legs, have they? Well, then, they towed their tails along behind—and skeedadled. There was one, however, which I remember distinctly as being an exception to the rule.

I was bass fishing one morning, along the Mattaponi, and, in the course of my perambulations along the stream, I came to an old tree lying out in the river. This tree had, in years gone by, been the home of sundry 'coons, but one night the 'coons being chased by dogs, treed therein, and the 'coon-hunters arriving on the scene felled the 'coons' abode, and it landed in the river. The log was hollow, and on the up-stream side of it the water was quite shallow, being made so by the detritus washed down by occasional freshets. Below the log was a deep "hole," and around the off-shore end the entire river raced in a swift channel some fifteen feet wide. Just the place, I thought, for making the acquaintance of one or more of the finny beauties I was after. So I lost no time in scrambling down the bank, out on the log, and soon was "skittering" in great style. I was working gradually along the log, sidewise, when, happening to glance down toward my feet, I spied, projecting about two inches from a knothole, and right beside one foot, a copper-colored head that sent a few unpleasant little shivers along my spine. It was broad, flat and triangular, a little larger than a half dollar, without doubt the largest moccasin head I had ever seen. Needless to say I hastily sought terra firma. But I had no intention of permitting the snake to escape, quite the contrary, for the skin of a moccasin snake as large as that one must be to grow that size of head would be a vacation trophy to be proud of. I went, therefore, to an old dead tree and broke from it a club suitable for slaughtering snakes, then led a personally conducted sortie into the serpentine enemy's country. Yes, the head still reposed about two inches outside the knot hole, all the rest of the snake's body was safely encompassed by the log.

"OF SNAKES I HAVE MET MANY."

It was decidedly improbable that I could hit a mark so small, but nevertheless I raised the club and swatted vigorously. The head disappeared, likewise the lower half of my club; I hit hard, you see, and the sudden collision of the club with the log caused the club to break. And there I was, out on a hollow log with half a club, and the biggest moccasin snake I had ever seen crawling around within, likely at any moment to introduce his evil-minded countenance from the shore end of the hollow, and then——. There remained but one thing to do and I did it.

For some moments I stood on the bank watching for the snake's reappearance. I had by that time obtained a stouter club, and hoped to bag my game should another opportunity offer. Presently I saw him gliding out from another knothole farther toward the end of the log. Swiftly his long cross-wise striped body crawled from the hole into the water, then watching him intently, I saw him turn, and swimming about fifteen inches under water, make straight for the bank—and ME.

I have stalked numerous snakes, as well as game, in my time, but I'm blessed if that wasn't the first experience I ever had of a snake a-stalking me, and well, to tell the truth, the situation was not entirely pleasant. But I determined to defend the fort valiantly and resolved to whale the besieging force as long as my club held together. The fight, however, never occurred, for the bank at that point was slightly overhanging, and after my friend passed under the overhanging part he became lost to my view. Where he went I know not, suffice it to say I waited some time expecting his head to appear on the horizon. But it

came not and as fish don't bite well after ten o'clock, and it was now after eight, and I had not as yet caught a solitary one, I left the serpent to his pleasure.

G. B. BUCHANAN.

WOODFORD, VA.

A Daily Vacation.

In this era of strenuous effort to obtain wealth, a person needs frequent recreation to keep his mind in somewhat normal state. I have come to the conclusion that a vacation for an outing once a year is not sufficient, so I aim to take a daily one, usually from seven o'clock in the evening to nine.

I perhaps take a notion to follow the route over which Moses led the children of Israel out of Egypt. I start at Succoth, a little to the south of Suez Canal, where they crossed the western arm of the Red Sea going south to Mt. Sinai. There I visit the monastery of St. Catharine. From there I follow the track north to Kadesh, a little southwest of Mt. Hor, the neighborhood in which they perhaps roamed about, during the greater part of the forty years.

Next I go into Asia Minor and visit some of the buried and otherwise ruined ancient cities, such as Ephesus and Sardes, where once lived and ruled a man named Crœsus the richest man that ever lived, and deemed himself the happiest man in the world.

It is said that he was much displeased when Solon told him that no man should be called happy till his death, and before he died he became as poor and miserable as it is possible for any human being to be and still live.

Occasionally I take a trip to Washington, D. C., to listen to the investigations of alleged misdeeds of our lawmakers and executive officials; but that arouses my temper; so in order to overcome that unpleasant mood, I take a trip to 130 Fulton Street, New York, to have a hearty handshaking with the editorial staff of THE INDEPENDENT.

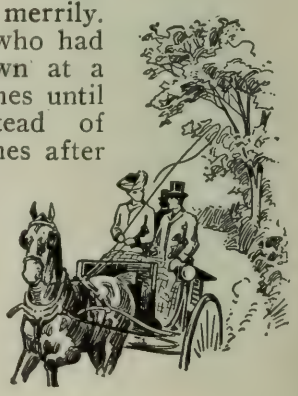
In the summer, on Sunday afternoons, I sit in the shade of a tree that I planted myself, surrounded with my children and grandchildren, telling them of my experiences in life, and of what I have heard and seen of the world.

C. J. CARLSON.

WAHOO, NEB.

The Pleasantest Vacation We Ever Had.

Last year I hailed the Vacation Number of THE INDEPENDENT with pleasure altho I did not expect a vacation for myself. Not because we are too poor, but because my husband is a farmer—who lives to work instead of working to live. I read "A Vacation at Home" aloud. My husband said, "Huh! What's the use? We could go roaming over the world." And I said, "This is a description of Shingle House, Potter County, and the Potter County line is only ten miles away; we will go this summer and see Herman—'an old sweetheart of mine' who did not die when I threw him over, but took heart of grace and married—three times—most excellent wives—one after the other."



My husband mocked my scheme, but when potato bugs came down like the plagues of Egypt, and his soul as well as his body loathed the idea of toil, we started out, all in our best bib and tucker, a luncheon under the carriage seat, up and over the mountain to the wildest spot in Potter County; first we went up a long valley, once a garden of delight. Now the farm houses are falling down and the orchards moss-grow the land—hay land. The sons and daughters are town dwellers. Here and there some aged men and women greeted us, but most of the farms were desolate. Cinnamon roses ran riot and dog lilies hung over the paths, the spring rows skirted blue with forget-me-nots—but life and thought had gone away. Then we followed the top of the ridge thru an old slashing and swung down into Pleasant Vale. "Apple and pear tree fruited deep," fair as the garden of the Lord.

We stayed that night—the little lass and my husband and I, with his poorest relatives. And the cottage was so clean, and the fare so dainty, and the welcome so hearty. We were sorry we never had visited them before—lonely and calm as Heaven itself the hills rose silently around us praising God all the night long.

Then upward and still higher wound the narrow road. Round about the hemlocks stood grave and dignified, reminding me of Socrates. They, too, fronted death, for man was envious of their glory—and now they are laying silent and dead—but they spent their last hours happy. The ferns came close while all the underwood bloomed, and the wood birds sang requiem. Then we come down the long valley. All the trees had been cut, and berry-brush had filled the land, a thousand, thousand acres, and where a red raspberry bush loaded with ripe fruit did not stand, there was a black-cap or blackberry or elderberry, and the ground between was red with wintergreens and squawberries.

And not a berry would be gathered except by the wild birds and animals, and little children starving for lack of fruit in the cities! The hills swung open, and the round intervale all green lay spread before us. A great spring rushed down to greet us noisily. All was peace and contentment. They had food and raiment, our good friends had.

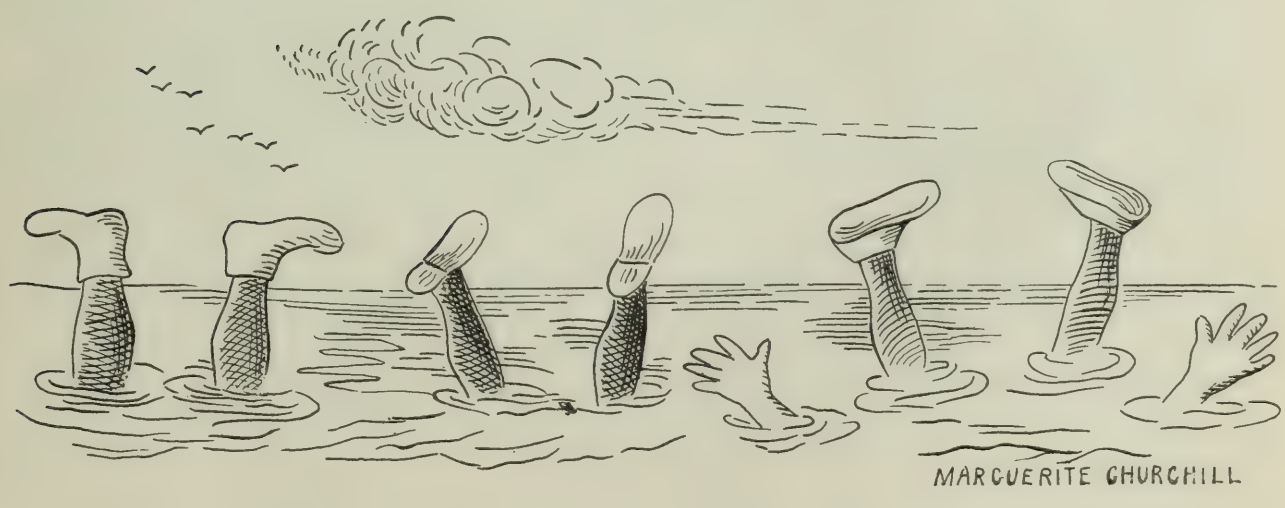
We renewed the bonds of friendship, and the time sped away merrily. The little lass found a girl who had to be content with one gown at a time, and who wore her clothes until they were worn out, instead of throwing them aside sometimes after once wearing.

We started at last, all better and happier for the visit. And we set out on the long drive home another way we had never been before, all too soon. We swung down the river. The "flyer" was shooting

thru the valley like a crazy comet, and "the red devils" tore down the highway. We had left peace and poverty behind us—or was it *we* who were poor. *They* were content with what they had, and they had enough to eat and wear, fire and salt and candle-light, and the good God watched over them.

MARY E. RICE.

SMITHPORT, PA.



Good Night Youself.

While you're all discussing vacation experience, it may come handy to chip in a little fight I had with a four-pointer buck some time ago. I was camping along Eel River, Mendocino County, California, waiting for the salmon fishing to commence. Being a little early in the season and not having had enough rain yet to raise the river so the salmon could come up from the deep water, I contented myself with hunting, smoking and reading the time away. My camp was in an opening well covered with grass which was a treat for my pony (my sole companion at the time mentioned). So one morning I awoke with a hankering after venison, and it didn't take me long to make up my mind to saddle my bronc', take my 40-65 Marlin and hit the trail for my favorite hunting ground, about two miles down the river. Arrived there I made for a rock boulder (I called Hillside View); from the rock I could overlook about 80 acres of a sunny mountain side, a favorite place for deer to come and take a sun bath in the cool of the morning. I didn't have to wait long before I sighted a four-pointer moving between some chaparral bushes; being afraid that he might get away, I cut loose on him with my shooting iron, but hit too far back to make a drop shot and had the pleasure (?) to see the four-footed gentleman disappear in a grove of live oak. I could see everything around the live oak, so not seeing the buck make its appearance outside this natural temple, I concluded that in the meantime he had given up the struggle for existence. However, it didn't take me long to find out, for half an hour later found me circling his nichts kommt heraus place, and after finding the track penetrated into the interior, I came to a place where he had laid down awhile, and left some of his life's fluid behind.

While taking in the situation I gave away to my old habit, meditation, thinking about how cruel it is to have to kill for existence, when I was awakened out of my sentimental review by a snort that was flavored with the sweet tune escaping the foghorn of a Newfoundland codfisher. At the same time I felt something—well, I don't know what to call it. Were any of you gentlemen ever lightning struck? If so that's just about the way I felt. The behorned critter was only wounded enough to arouse his fighting blood, and for a while I thought he's going to trample me into mincemeat. I had lost my rifle in the first encounter, but had an 8-inch bowie, and with this I tried to parry his natural pokers, and as accidents will happen now and then, so it was this time, and ma chere ami crossed the line where there is no return. I had quite a time to load the buck on the pony and get to camp. I had venison for supper that night. After that I bathed my bruises, rolled up in my blankets, took a trip through dreamland, where a hideous monster attacked me with a poker and finally awoke wet with perspiration. Well, you can all spin yarns till the sun peeps over yonder mountain, but I'm going to turn in and saw some wood. Good night.

OSCAR FRIEDRICH.

COLUSA, CAL.

FANNIE BULLOCK WORKMAN.

Recent First Ascents in the Himalaya

BY FANNY BULLOCK WORKMAN, F.R.L.G.S.

[Mrs. Workman, who is a native of Worcester, Mass., is an Officer l'Instruction Publique of France and a fellow of the Royal Geographical Society, London. Major Darwin, the president of the society, said after Mrs. Workman read her paper on the Hispar Journey before it last December: "I believe I am right in saying that the feats accomplished by Mrs. Workman are more remarkable in the way of mountaineering than those which have been accomplished ever before by any of her sex. Whether I ought to make that limitation or not I am rather doubtful, but, at all events, with that limitation it will not be denied." —EDITOR.]

THE Hispar Glacier, 36 miles long, and one of the four largest in the Karakoram mountain range, was the field of our last Himalayan exploration. Previous to visiting it we had obtained a good idea of the splendid scenery surrounding its source, for, ten years ago, on our exploration of the Biafo Glacier, in Baltistan, we had ascended the Hispar Pass. This pass forms the culmination or watershed between the Hispar Glacier, running west to Nagar, and the Biafo Glacier, flowing southeast to Baltistan.

The two glaciers thus meeting in the summit of the Hispar Pass, 17,500 feet, present a natural phenomenon unique in Himalaya, perhaps in the world, namely, an unbroken glacial band running 74 miles from tongue to tongue.

Six years ago, with Petigax and Savoye, Italian guides, I made the first ascent of the Alchori Col, 17,000 feet, at the head of the Alchori Glacier, in Baltistan, with the hope of discovering a new snow passage over which our caravan could be taken to the Hispar. But instead of finding a pass descending to that glacier, I found myself perched on a snow cornice overlooking a precipice of 2,000 feet sheer, below which ran the lonely Hispar, a long, crevassed river, incased northward by lofty, unknown, unnamed mountains.

I turned away, balked by the precipice, but the lure of unexplored mountain wastes held me, as it often does, in its grip, and I determined some day to reach at least the feet of the snow giants, between me and which Nature had here placed such a formidable barrier.

Had we been able to cross the Karakoram watershed at this point we should have had the Hispar and its snow treasures, so to speak, well in hand; whereas, when some years later it was reached, there was a weary prelude of 300 miles of nude valleys and high passes to be played before arriving even at its tongue.

Still, most disagreeable things offer compensations, and such were, this time, that we took to the Hispar a thoroly organized caravan, including two topographers, who were to make a detailed glacial survey of it and its large unknown branches, on the plan sometimes carried out in the Alps and America, but not before attempted in the Himalaya.

That such an expedition involved an immense amount of previous organization and continual work and calculation during the time we were on the glaciers may be seen from the fact that the seventy or more coolies employed had to be

GREAT AREA OF BIAFO-HISPAR WATERSHED PEAK.

fed by us, and the grain and rice requisite for this purpose had, much of it, to be brought from Kashmir, 300 miles, and the remainder supplied by the Mir of Nagar, living 30 miles from Hispar village, the last inhabited spot.

The expedition was divided into two parties. The topographers, with camp outfit, native servants, and about ten coolies, carried on the survey as the nature of their work and the weather admitted of doing. Our caravan con-

ONE OF THE SNOW SCARPS ASCENDED TO REACH TRIPLE CORNICE PEAK.
The ice shelf beneath it was only about twenty feet wide. From this an ice precipice of several hundred feet descended. The upper stratified edge of precipice is seen at right.

sisted of Dr. Hunter Workman, myself, Cyprien Savoye, guide, three Italian porters, native headman and coolies. We continued our explorations and observations of glaciers and ascents of cols and peaks independently, meeting the surveyors from time to time to compare notes.

Our own caravan was also often divided for days, the cook, with large tents, bulk of supplies and sheep being left at a base of perhaps 15,000 feet, while, with light tents, guide, porters and a few coolies we explored and climbed for five or six days, until driven back to the base by bad weather. Such were the conditions of our nomad life on the Hispar for eight weeks.

While investigating a branch glacier which enters the Hispar at 15 miles from its tongue, a fine snow mountain attracted our attention, which, if it could be scaled, would offer a capital station for study of the region and a magnificent panorama.

The question was, Could it be climbed? From a projecting snow mamelon on its west shoulder the final thousand feet looked possible enough, but below this mamelon the mountain fell in ice-falls, seamed both longitudinally and horizontally by gaping crevasses, or in snow-scarps of appalling steepness, to near where it took its rise from the glacier. This was only typical of the character of the whole army of peaks surrounding the Hispar.

On other great Asiatic glaciers one sees mountains with at least some moderate, clean-cut slopes, which tempt the climber to try his luck on them, but such is not the case with these forbidding giants. Studying the Hispar system from any eminence, one is permeated with the fanciful impression that a succession of mighty earth vibrations must at some time have shaken the peaks into the chaotic riven slopes, savage rock precipices, and splintered or corniced pinnacles they now present; not rational, normal mountains any longer, but colossi of rock and snow chaos, with scarcely a ledge or cranny where even a mountain demon could lodge with safety.

On this particular ascent the greatest danger was from avalanches, which scored the lower two-thirds of the mountain from noon until after nightfall. With a few coolies we ascended one afternoon to the top of the glacier, and putting up some *tentes d'abries* sent back the coolies to the lower camp with orders to return the next day at noon. Savoye, the guide, strode across the glacier before sunset to examine the mountain and plan a route, as he was very keen on starting by 2 a. m. and we should have to make our path by lantern-light only.

A few hours' rest in the sleep-sacks and Savoye was heard calling a reveil outside the tents. That coffee made on the small kerosene stoves followed as soon as posible, and sharp at 2 o'clock, after crowding coats and provisions for the day into the rück-sacks, we started forth roped in two caravans. The firmament was brilliant with stars but no waning moon lighted the gray, hardly perceptible snow waste.

Progress was rapid for a few minutes over a gently rising plateau, and then the gradient grew apace and with it came a big icefall composed of tall pinnacles or séracs, separated by bottomless chasms. Savoye turned sharp to the right hoping to contour them, but here, as far as we could see, rose a terrace of long crevasses ready to receive us into their creepy depths.

"Sapristi," quoth Savoye, "quelle route." But his eagle eye spied a narrow snow band, near the center of the first crevasse, and by stepping gingerly sideways this was passed and a dozen steps upward brought us to the next yawning ice-mouth. This proved less accommodating than the first crevasse and offered no bridge at all. After scanning its fifty or more feet of length with the lantern, the only way over appeared to be a jump near its narrower end.

Paying out the rope the guide bounded over, then drawing it taut and cautioning the porter behind me to look out for his end called, "Santez, Madame." How I hated that leap in the dark across the four or five feet of invisible space, but it had to be done, so taking the plunge I landed on the ice-slant where the guide stood. The others followed in turn and slowly, sometimes jumping, sometimes bridging and again finding a way around them, we conquered seven or eight enormous chasms.

Then a steep, frozen scarp awaited us, which was manageable by cutting steps up its ice surface. This ended at the foot of a series of tall white cones which, as Savoye held the lantern aloft, loomed above like a bevy of mountain-spectres assembled in ghostly array to warn us to be sensible and return forthwith whence we had come. But we were bound they should receive us, and as they proved to be solid spectres we cut steps up and down several, wound a way round others, and finally got above the whole bad lot and reached a wide bed of avalanche-débris, which had fallen during the warm hours of the previous day.

Here, where after sunrise it would be folly to tarry a moment, we flung ourselves down after two hours' arduous work to breakfast and watch the wonderful spectacle of dawn in the upper snow world. Dawn is beautiful in the plains of India when heralded by the swish and twitter of innumerable song-birds, but a thousand times more exquisite is the approach of day above all camps and abodes of humanity, beyond even the voice of the high-flying mountain-chough, where only the soft whisper of the breeze from virgin summits breathes its music on the ear. Imperceptibly, as we sat among the avalanches, the curtain of darkness which had held us in bondage was raised, and on all sides peaks, ice-falls and glaciers emerged before our gaze in the solemn magnificence of before sunrise lighting.

While we reveled in the glory of the eternal snows, Savoye, tho ardently discussing cold meat and jam, stood with his eyes riveted on the sharp, almost perpendicular 700 foot wall which loomed in mauve toning just beyond the plowed-up snow-field where we halted. Up this great snow-scarf lay, perforce, our route. At one end of it, which luckily we should not touch, hung great stratified ice-cornices shimmering in weird beauty now, but ready later, when the sun burned upon them, to fall in deadly ice-masses to enhance the tumbled hillocks of snow-débris we were about to leave.

The ropes being adjusted again in fifteen minutes its base was reached where constant step-cutting and serious climbing was in order for over an hour.

Here we climbed straight, there we zig-zagged, as snow conditions demanded, making steady headway, the surface remaining hard even after the first sun's rays fell upon it. It was severe and ticklish traveling and each man had to look out that he did not slither and plunge his caravan down the precipice to a useless end among the fallen avalanches.

Two or three times, when it was possible to halt a bit, the scarp was measused by clinometer, and the angle proved to be quite 70 degrees. The slant was sharper than the camera makes it appear in the photograph. The only steeper gradient ascended this summer was found on the mountain soon to be described. Some mountain-fakers talk of climbing long distances at 85 degrees, but in my opinion such feats are not possible. An angle of 75 degrees may be considered the limit at which a long incline can be taken, and that will prove dangerous and strenuous enough for a hardy climber. Those who talk about long slants of 85 degrees never, I have observed, mention measuring their slopes. Soon after the great wall was ended, easier gradients brought us to the base of the mamelon west of the main peak, and here Nature gave us yet another taste of snow peculiarities in form of a 20-foot ice-wall overhung by a snow cornice fluted with massive blue icicles, below which descended the deepest of chasms. From the opening of the chasm, in all directions barring our approach, ran a series of wide most bizarre crevasses.

One porter suggested that, at last, we must give in to mountain obstacles, but Savoye laughed and shook his head. I won't bore the reader with what we did, lest he think me guilty of too many snow yarns. Suffice it to say in half an hour we stood on the snow-mamelon and saw the last thousand feet of the mountain rise up in moderate slopes above us.

This was a baffling mountain, tho, even to the very top. Arriving on a ledge 20 feet from the apex, we discovered the small final cone, on the side confronting us, to be split into three giant tooth-like cornices. A short snow slant overhanging a deep precipice separated our ledge from the cornice. Savoye, held on a good length of rope

by the porters, began at once to cut his way up this. The surface was of peculiar consistency, half snow, half ice, and very hard to impress with the ice ax. After twenty minutes hacking he returned to us incased in powdery snow from head to foot. He reported that, owing to the quality of the snow, it would take nearly two hours to cut thru the cornices to the top.

In view of the advancing day and the great danger from avalanches on the descent, the question arose, Was it safe to risk it? No, we all agreed, for the mountain was virtually climbed; so, turning, we headed downward, inwardly provoked enough with the preposterous cone and its baffling trio of cornices coming just at the top, and after so many other extraordinary difficulties had been overcome. The avid explorer of new peaks, however, seldom gets all he wants, namely, perfect weather thruout an ascent and the summit, and we had reason to be well satisfied, for the weather was without a flaw, and on the last thousand feet we had secured many fine photographs, and fixed mountains on the Hispar that would aid all the further investigation of that glacier.

The last two-thirds of the descent was what might be termed a race for life in trying to reach the glacier before the usual avalanche cannonade of the afternoon began. Avalanches fell very near us at several points and we had pretty dangerous work to perform in getting thru the now softened ice-falls, but the tents on the glacier were safely reached at 12.30, and the lower camp later on, after fifteen hours of thrilling mountain experiences. Never have I met with a peak of less than 20,000 feet so bristling with uncommon and varied snow obsta-

MRS. BULLOCK WORKMAN WITH GUIDE AND PORTER ON THE SUMMIT OF BIAFO-HISPAR WATERSHED PEAK.
Photographed by Dr. Hunter Workman from a neighboring peak.

cles as was this one, which was named Triple Cornice Peak.

A few years ago, from a high snow col south of the Hispar region, we saw and photographed a tall, ethereal snow-pyramid rising at a great distance above a gap in an intervening range. This we then located as being probably near the source of the Hispar Glacier, and such in reality it proved to be. At about 20 miles up the Hispar it flashed upon our view again, looming above broken snow-fields north of the Hispar Pass, lifting its now more developed, more attenuated snow-spire into the blue heaven like a challenge. What a peak, and from it what a view would be obtained! Poised as it was on a huge snow-pedestal directly above the watershed of the Hispar and Biafo glaciers, its summit on a clear day would command the 75 miles of these glaciers and their surrounding mountain satellites on all sides.

During the weeks of exploring the branch glaciers, it never left my mind, and I decided, when the main work was over and a base camp at the foot of the pass established, to have my try at it.

Thus it came to pass a month later, after weeks of hard research work on the hitherto unexplored Hispar tributaries, and of existing in snow-camps thru storms of fifty and sixty hours' duration, we found ourselves leaving base camp at 15,000 feet, accompanied by Savoye, the porters, headman, one servant, and fifteen coolies, carrying small tents and provisions for three days.

As with the guide and two porters I started ahead to plot out the track, I heard the coolies grumbling, and one who spoke Hindustani remarked on the "*karab rasta*" (bad path). If we were taking the trouble to make them a path at all on an unknown mountain they should have been satisfied, but gratitude is a non-existent word in coolie patois.

ASCENDING ICE FALL.
18,000 feet.

A bitter wind blew down from the Hispar Pass as we filed up to the north of it over hard, purple slopes, at that hour untouched by the sun. Two hours later, when deep in negotiation of a serac-fall leading to a lower ridge of the mountain, the sun shining from a clear sky was so hot that fur caps and heavy coats were consigned to the depths of the rück-sacks.

Making a circuitous path around the ridge, a high snow-basin between the east and west shoulders of the peak was discovered, and this we saw was the place to camp that night, if the summit was to be gained the next day. But getting there was difficult business. An army of wicked gnomes must have been at work plowing up and making a snow hodge-podge of the lower part of this stately peak, for not ten yards of smooth surface was visible amid the maze of pinnacles, ice-fluted crevasses and torn-up slants.

We made the best way we could thru, taking care to

pound our steps in the softening surface for the coolies, still a good distance in arrears. Finally a small plateau, not seen from below, was reached, and from here a very steep 800-foot snow-wall led presumably to the high basin we wished to camp in. Some one suggested lunch, it being near noon, but I replied: "Nonsense; if we stop here the coolies will refuse to go on. The wall must be taken before they arrive."

Zigzagging up in this deep, wet snow nearly to the knees was no easy work, but this task was three-quarters over when the caravan appeared on the plateau. We called down to them to hurry up, nice large steps having been made for them. Our soothing words did not, however, inspire them with confidence, and they refused to move.

At last Savoye said he would go down and help them up. This he good-naturedly did, and after parleying a time with them and the chief, as reward for his kindness, to our consternation we saw three stout Nagaris attack him with spiked sticks. But he was ready for them, and instantly, in self-defense, felled one of them to the snow with his ax. After that they subsided, and finally moved upward, the coolies who had been knocked down limping heavily behind, led by the headman. I would add that, altho the chief often beat the coolies, this was the first time a native was struck by our Europeans.

By 3.30 p. m. the tents were pitched in the eerie basin, barely safe from avalanches falling from the mountain wall between the two shoulders. These two arêtes fell straight from the pointed top of the peak in sharpest inclines over 2,000 feet. The east one was so fringed with cornices that it was absolutely unsafe, and there remained no alternative but to try the south, much steeper one, which had hitherto been deemed too hazardous.

PREPARING TO DESCEND A BRANCH OF HISPAR GLACIER FROM A CAMP NEAR ITS HEAD.

The next morning the sky looked hazy, and we felt there would be a storm before night.

With Savoye and two porters I started out for the mountain, for, if it was climbable at all, we were likely to accomplish it before the storm broke. Dr. Workman later left with the other porter for a lower summit east of camp, for purposes of observation.

A few intermediate snow-fields brought us to a high wall, up the icy surface of which steps were cut to the great shoulder that ran apparently in sky-scraping slants clear to the top, still invisible from where we stood. Cutting each step, we moved upward slowly, for the arête was very narrow and ice-coated at that hour, and the precipices on both sides were already very terrifying. After an hour's continuous upward plodding the arête ended momentarily in a small ridge, above which came an awkward reach of rock gendarmes.

Before attacking these we halted to breathe a bit and take in the entrancing and widening view of glaciers and mountains. Turning my Zeiss glass downward, my eye lit on the tents far below in the hollow. In front of one the native was seated on the snow, enjoying the early sunlight, wrapped in what looked suspiciously like one of our sleeping sacks, and composedly smoking a pipe. I handed the glass to Savoye, who, on looking, exclaimed:

"Ah, the rascal; that's my reserve pipe and my tobacco he is smoking, for he does not own a pipe."

"And sitting in my sleep-sack doubtless," I added, turning toward the mountain.

Who would have thought this purest of snow-pyramids was to give us a tough stint of rock climbing? But it did, and we worked half an hour on rock pinnacles overhanging a wild abyss, which recalled a bad place on Zermatt's Zinal-Rolthorn. As soon as these ended, a solid ice-wall of 15 feet demanded all our skill, for only half steps could be cut, which, when stepped upon, left most of the foot in mid air.

From this the arête led up again in increasing steepness, an endless white line. It was here that I found the incline steeper than on the previous ascent, reaching as near as I could make it out, about an angle of 75 degrees. The weather was thickening in on the Hispar side, and the sun, shining thru a haze, made the surface soft, thus adding to the difficulty of overcoming the terrible gradient. The precipices, too, in gruesome depths, were beyond those I recall on any mountain. One simply had to accept the circumstance of climbing a tight rope, and not look to right or left.

Luckily such slants lead up fast, every step being a gain in hight, and, just as all were getting quite to the end of endurance, the pitch lessened and soon we saw the small summit rising in a sharp-corniced cone beyond some rocks, and not ten minutes away.

We all ascended the cone, but on the very apex, which was a cornice, or snow-hood, only one at a time could stand, held on the rope by the others just below.

The view quite equaled my expectations, except that approaching bad weather marred it somewhat toward the Hispar Glacier. The whole upper Biafo, its wide source, called Snow Lake, and several great tributaries 15 miles in length, lay mapped as no map could show them, at my feet 6,000 feet below. The finest Hispar peaks and a dozen other giants of the Karakoram were visible for a few minutes, and I plainly saw that 28,000 foot colossus K2, whose sheer precipices have frowned defiance at different times on ordinary mortals, and only lately on a royal aspirant.

I saw many other sights beyond the frontier, and points that served later to make our new map superior to any existing, and then mist swept in, in rolling billows, blotting out glaciers and distant mountains, leaving us stranded on a snow-tooth, in a fluffy ocean of cloud. Before this happened, the others had seen us from the lower peak, where they stood, and Dr. Workman photographed us standing on the summit, as seen in the illustration.

Chilled to the bone by the swirling mist, we descended to the slight shelter of the rocks just below, where I finished my observations under cover of coats held about me by the guides, and, after a hasty meal, we left the beautiful, cloud-bound pyramid, the king of the Hispar and Biafo glaciers, that had lured me for weeks, with our hearts full of victory, for at the end of hard work we had conquered.

The descent was difficult and hazardous down the interminable arête, thru cloud and mist, but tuning all our energies to careful manipulation of every movement, we accomplished it without accident, and floundering over the final snow-fields in heavy wet snow, reached camp, where the other two greeted us with shouts of approval.

The hight of the mountain, later computed, is 21,350 feet, and was named the Hispar-Biafo Watershed Peak. Altho not as high, it yielded nothing in thrilling incident and arduousness of ascent, and in magnificence of panorama, to my highest Himalayan peak of 23,300 feet.

Paris, France.

THE WORLD'S CHAMPION BISON.

Mr. Harry V. Radford, who has been exploring in the Arctic regions for the past year entirely alone, except where he met and mingled with the Eskimos, has just sent us the above unique illustration. Mr. Radford has made a special study of the wood bison and his habitat, hitherto practically unknown to white men. He has been over much of their range with pack horses in summer and dog sleds in winter, conducting his investigations under a special permit from the Canadian Government to collect for scientific purposes. Such a permit has not previously been granted to any naturalist or sportsman. On December 1 he shot a magnificent wood bison bull (the first to fall to a white hunter), the head of which appears in the illustration. This bison is the largest of which any record exists, surpassing in size and weight the previous world's record bison, killed by W. F. Hornaday, of the New York Zoological Garden, in Montana, in 1886, and which is exhibited in the National Museum in Washington. The engravings of this Hornaday bison appear on our ten dollar bills. The specimen of Mr. Radford's, shown in the illustration, weighed 2,402 pounds. It was hunted down near Fort Smith in latitude 60°+ N. after an exhausting snowshoe chase lasting most of the day. The temperature at the time ranged at 42° Fahrenheit.

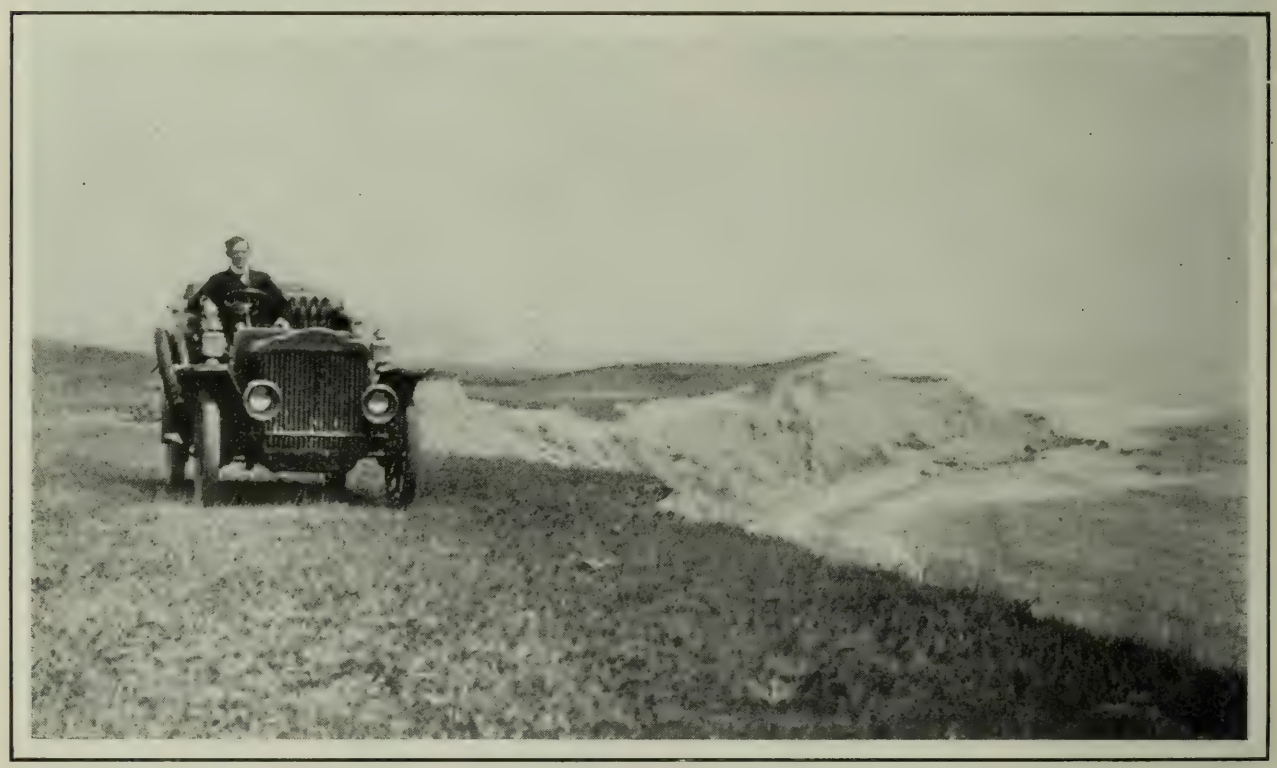
LAKE MONTANA.

THE GLACIER NATIONAL PARK IN MONTANA.

The accompanying pictures admirably show something of the charm of the proposed new Glacier National Park in Montana, just south of the Canadian boundary. The region included in this park is one of the most delightful in the world. To the east of the mountains the plains region drained by the Missouri and Saskatchewan River systems stretches mile upon mile of open grass land that is practically treeless. In sharp contrast to the plains rise the mountains, which seen from the distance, present a rock wall of great steepness. These apparently extend for miles, altho in actuality these walls are cut by long deep U-shaped canyons which have been largely formed by the great glaciers which once flowed from the snow-capped peaks and ridges which form the divide between the waters of the Atlantic and Pacific Oceans. The whole region is the habitat of many surviving wild animals, and the streams and lakes abound in fish of many varieties. In the upper reaches are barren rock areas in which the white goat is found in great numbers. Many big horn Rocky Mountain sheep are found on somewhat lower levels, and in the valleys and on the lower spurs are many deer and moose. A few elk still linger, and over the whole area from high glacier and the perpetual snow line to the valley and flat the grizzly bear is frequently met with. The park as contemplated contains an area of some 1,340 square miles; within these realms there are 250 lakes ranging from ten miles to a few hundred feet in extent. There are more than sixty glaciers and there are numerous plants and rocks in numbers and quantity to satisfy the most ardent student, and views of great variety, beauty and grandeur gratify the artist and lover of nature.



Five Crying Needs in Automobilism

BY WILLIAM FREDERICK DIX

THE development of automobilism in this country during the last four or five years has been toward luxury and increasing cost. The manufacturers seem to cater more and more to the well to do and the wealthy, and to neglect the needs of those of very moderate means. Prior to five years ago there were more advertisements of cars selling under $1,000 than there were those of $2,000 or $3,000 and over. People hoped that as factories were developed, machinery perfected and models standardized, the prices of cars would gradually lessen. Today, however, the majority of cars are advertised to sell from $1,500 to $5,000 and over. The engines have been vastly improved and now are practically noiseless, are very powerful and so simple in control as to be remarkably "fool-proof." The joke of engine trouble on the road has had its day and is obsolete. Limousine and touring car bodies are marvels of luxury and comfort, and the modern motor car is a thing of beauty, elegance and efficiency.

But in five respects there has been practically no improvement, and until modern ingenuity and skill have covered these points, the motorist will have grounds of complaint on the subject.

First—It seems extraordinary that the driver of a splendidly built, modern, gas-engine driven car, capable of developing thirty or forty or fifty horse power, should have to exert all his physical strength and perform a strenuous wrestling match at the hand-crank to get that engine started! Every car driver who goes thru this painful ideal rebels at it. On cold days especially it is about all a man of moderate strength can do to get his engine in motion. It is preposterous that some adequate device has not been worked out whereby some of the power generated by the engine when it is running cannot be saved to start it again after it has grown cold. Most good engines start on compression while the engine and the water in the cylinder jackets are still warm but almost never after several hours of standing. Only one car, so

ALONG THE CLIFF.

BUSINESS CARS.

APPLE BLOSSOMS.

far as I know, claims to be self-cranking. There are one or more self-crankers on the market but they have to be attached to the outside of the car, are cumbersome and expensive and do not seem to have yet made many friends. The modern car should be so built that the driver could take his seat, touch a button or push-lever, and be sure of having his engine start of his own conserved power. When this is possible, thousands of women will become car owners and car drivers. The crank is the greatest obstacle today to women in motordom.

Second—The engine should be able to generate its own electricity. Kerosene lamps are a nuisance. They are dirty, hard to light on windy nights and have to be constantly refilled. If electric lights are used heavy storage batteries or dry cells have to be carried. These take up valuable room and have to be constantly recharged or replaced. There is enough friction all thru the chassis to generate sufficient electricity for lights all over the car, including one on the end of a cord for searching the engine at night.

Third—Quite as preposterous as the hand crank is the fact that the most vulnerable part of the entire mechanism is in the most exposed place! Imagine a battleship carrying all its ammunition on the upper deck under a canvas awning! The pneumatic rubber tire should be abolished. A motor car driver starts out for a trip with a wonderful vehicle capable of bearing him swiftly and safely all over the land, yet, at any moment—puff! sizz-zz-bang! And an hour's dirty and strenuous job confronts him. A car owner may be in evening dress and taking his wife out to dinner. It is raining and the road is muddy. He is a mile or two from anywhere and bang! goes a tire! The puncture and the blowout are the two great banes of motoring. Changing a tire on the road is no gentleman's job and not all motor owners can afford a chauffeur. Non-puncturable tubes, tube protectors, demonstrable rims and spare wheels are advertised galore, but these are but make-shifts at the best. There should be invented wheels with durable, solid rubber tires whose office is only to save noise. The resilience should be arranged for between the rim and the hub or in the hub or the axle or some place where it is not subject to

RIVALS.

OUT OF THE WOODS.

damage. This perhaps is the most crying need of the day in automobilism—the abolition of tire trouble.

Fourth—The lines of the car body are not yet as artistic or convenient as they could be. The "gunboat" or "torpedo" models, inclosing the two front seats, which are seen this year, are a decided step toward graceful form because they connect the bonnet in front with the body of the car and this idea will probably be developed until the form of the body is a homogeneous whole, a graceful, cigar-shaped elipse with one rounded point in front of the radiator and the other in the rear of the car. The gently swelling sides will give locker room in the doors and alongside the seats and in the rear there will be additional space for extra coats, rugs, lunch baskets, waterproofs, and so on, which now have to be carried inside the tonneau, where they are in the way, or in a trunk fastened on behind, which is unsightly. A body of this form will more fully protect the occupants against dust, which will be a great advantage.

Fifth—and perhaps most important. There should be cars on the market to correspond to the family pony cart; cars for children and nursemaids, for the housekeeper to run around to market in, cars with one or two cylinder engines of five or ten horse power that trundle along thru the village at five or eight miles an hour, that crank without effort, and that cost from $200 to $400. A man who now owns a $1,500 car and who cannot afford a chauffeur usually runs it himself ,and while he is in business his family walk. He can only give them the pleasures of motoring after business hours. Many of these men would gladly buy for family use a light, cheap buckboard or buggy, with solid rubber-tired wheels, a simple little engine and a top for wet weather, which is family could hack around in. Its cost of maintenance would be almost infinitesimal. It should be the family horse, always on the job and not requiring much skill or experience to drive. The man of slender means would find this a godsend, and when automobile manufacturers have time to turn their creative genius from the creation of powerful, expensive engines of the road to the addition on their catalogs of a thoroly reliable, cheap little donkey-cart affair for the daily use of the women and young people, automobilism will have fulfilled a mission which will be a veritable boon to our modern social life.

New York City.

On the Trail of the Loup Garou

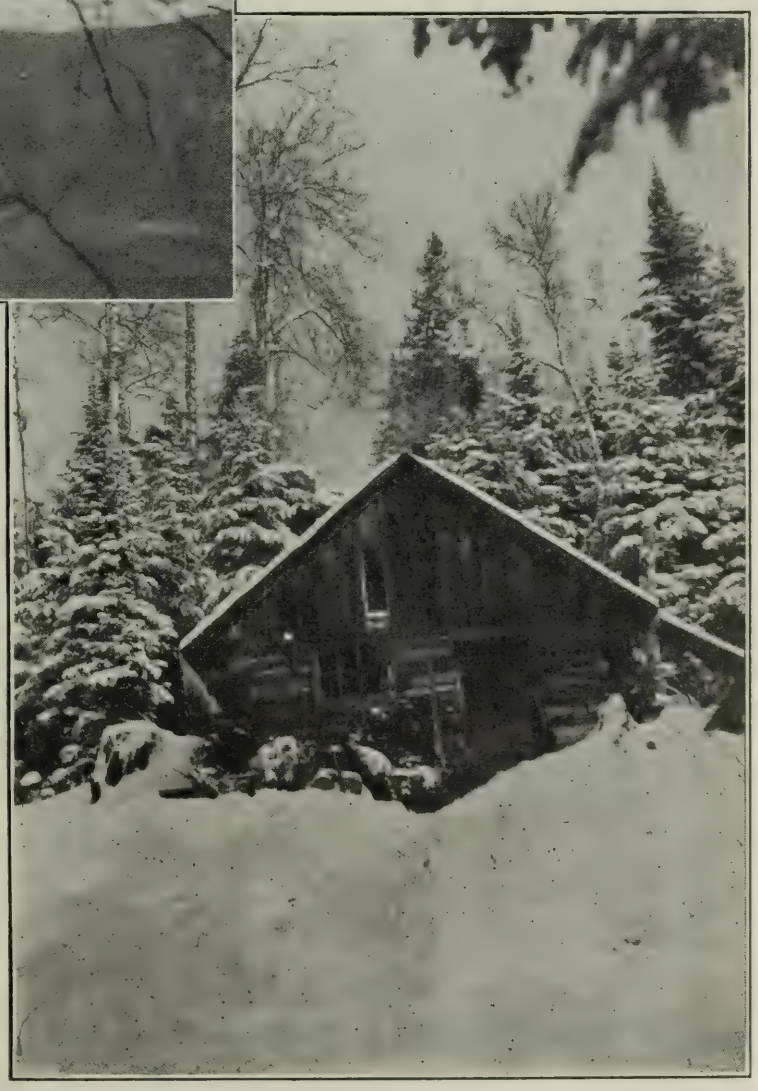
BY WILLIAM J. LONG

Author of "Northern Trails," "Brier Patch Philosophy," Etc.

SOME time about midnight the howling of a wolf awoke me, and I slipped out of my blankets and went down the trail to listen and find out what the packs were doing. The night was still and intensely cold; the Northern stars glittered and sparkled just over the tall spruce tops; the moon flooded the dim avenues with a vague and ghostly light, and all around stretched the silence and mystery of the snow-filled woods.

THE CHANCE OF A LIFETIME.

This illustration and those which follow are from photographs copyrighted, 1910, by William J. Long.



Suddenly a sound broke out, a terrible sound in this lonely place, and I forgot all else in trying to analyze it. For the gray wolf has many calls, and no two of them are alike or mean the same thing. This was no lunatic baying at the moon; it was not the trail cry that a wolf gives when he is running a buck and wants the pack to close in; it was not the food call, such as a wolf utters when he makes a kill and summons his companions to the feast; and it was not the deep-chested baying that one hears at nightfall when the old she-wolf, the leader of the pack, calls her cubs together for the hunting, and they answer the call with the clamor of hounds unleashed. A single great wolf was crying his woe from a distant hilltop, with a wild, eerie cry for which I had no explanation. He would begin with a clear falsetto, deepen by octaves into a full roar, and end with a moan that made the woods shiver. "He is a monster," I thought, "from the depth and power of his voice. Tomorrow I will go over, and find out what he is doing there, and get him if I can. Perhaps he is the loup garou himself." Then I fell to thinking of this imaginary monster, the

THE TRAIL.

werwolf of medieval superstition, which still appears in many a fearsome story told about the winter fire in Northern Quebec. For in the region in which I was camping, on a brief winter holiday, the tracks of an enormous wolf had been seen at intervals for years past, and at the thought of him the pious habitant would shiver and cross himself and draw nearer the fire, and tell another fearsome story of the loup garou—the evil spirit that runs abroad in the skin of a great wolf. And here in the woods, with the infinite mystery of the wilderness night around me, and that wild call moaning in my ears, was an excellent place to understand the superstition, even if I did not believe it. One's back chilled and crept in spite of one's self. Indeed, as a curious fact of natural history, I might record that I have never found but one man who did not discover, when alone in the woods at night, that his primitive spine treasured many an old superstition which his modern brain had long since rejected. The solitary exception was a crazy man, who used to sleep by day and roam the woods by night with the freedom and fearlessness of a wild animal.

The lone wolf ceased his moaning, and presently, in a different direction, a whole pack of wolves set up a hair-raising clamor. As I slipped

THE CAMP HALF-BURIED IN SNOW.

along the trail, deeper into the woods, I heard a faint rustling, and as I stole nearer the sound I was startled by two deer rushing out from almost under my nose. I was at the edge of a deer yard, and here a dozen or more defenseless animals were quietly going about getting their supper as if in the protection of a fenced park. One would have expected them to be terrified to death, but until I blundered among them they were absolutely without concern. Most men who found themselves in such a position, with the howl of a wolf pack ringing in their ears, would have fled at breakneck speed to shelter and bolted the door behind them; but these shy, defenseless animals were apparently without the shadow of fear. And this suggests another curious fact of natural history: that man is the only animal who carries fear in him, and who scatters it like a contagion wherever he goes. But that—as Plato remarked long before Kipling got the copyright—would appear to furnish the material for another disquisition.

Next morning early I started on snowshoes to find the trail of the midnight howler. Daylight is brave stuff. The tingle in my skin was now one of pure joy at being alive. Why, I wondered, should a man go to Bermuda and enervate himself, when Canada has a thousand vigors and tonics to offer. For the air was like fine old wine in its effect; the winter woods were beautiful beyond words; at every turn the wild trails beckoned and said, "Come here, see here"; and human nerves and muscles were, like the flying British squadron, ready to go anywhere and do anything. So for a time, until night should again fall and catch me alone in the woods, brain and spine both agreed that there was no such thing as a loup garou, but only a huge and cunning old wolf whose trail I must find and follow. Ordinarily I let all animals alone, preferring the work of God to that of the taxidermist, and liking well to see the bear wear his skin and the moose his antlers just as nature provided; but today I had other intentions. "Not that I

THE DEED.

love wolves less, but deer more. If I catch that big fellow I will stop his howling and game-killing," I said to myself, as I slipped the heavy revolver on one side of my belt to balance the ax on the other. Then, with a slap on various pockets, to be sure that compass, matches, knife and emergency ration, were in place, I was off for a long, heavenly day all alone in the big woods.

The first leg of my course led me backward, along my incoming snowshoe trail of the day before, to Kearney Lake, whence, by a series of little ponds and wolf runways, I intended to reach the northern ridges, where my loup garou had been howling. I was resolved, by the way, to pay no heed to any trail but his, since he was sure to lead me an all day's chase. But hardly had I buried myself in the woods when I noticed a fresh wolf trail dodging in and out beside me. "Too small for the loup garou," I said at a glance; "but what is he doing here? Perhaps he is the other kind." For, you must know, there are said to be two kinds of this fierce, uncanny beast. One is an evil spirit that takes the form of a wolf or man at will; the other is a suffering spirit, compelled to go in a beast's skin, which sometimes approaches men hoping for deliverance. A closer examination of the trail showed it to have been recently made by a young wolf which, during the night, had come poking cautiously out of the woods till he reached the last turn of the trail, where one might see the camp half buried in snow. There he stood behind a bush for a moment, evidently watching, and then turned and loped away to the northwest.

Here at the outset was a nice puzzle, and I must stop awhile and run the back trail to find out what this young wolf was doing away from his pack, and what brought him so near my camp. For among wolves, as among beavers and geese, and indeed most wild creatures, there are occasional hermits and outcasts whose ways are unaccountable.

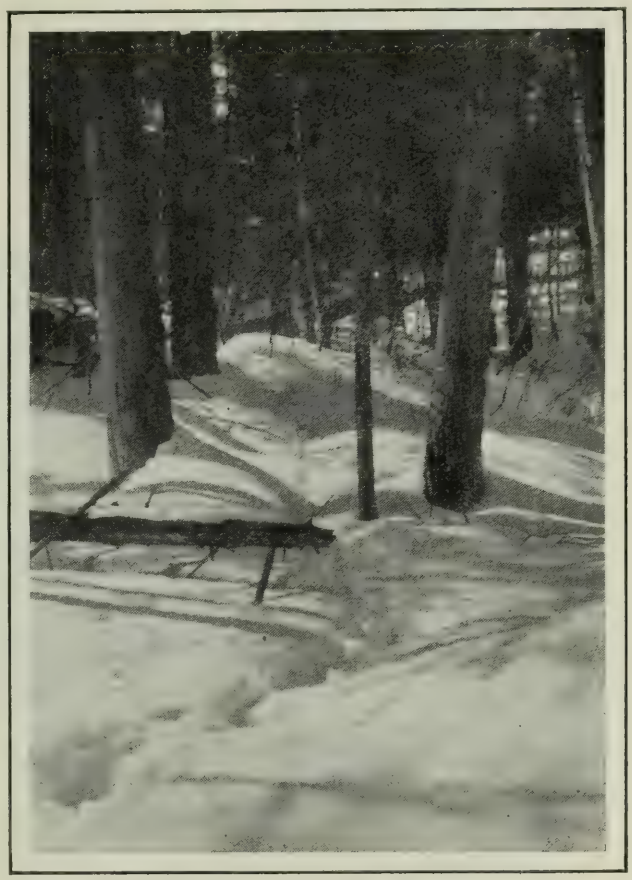
My first discovery was that this wolf had been plainly following me when I came toiling home after dark, dragging my moose-sled, happy and hungry after a long day with the trout on a distant lake. That in itself was most unusual, for tho there are plenty of big wolves in

AND THE FELLOW THAT DID IT.

these woods, they never molest a man. Ordinarily they avoid even the trail of men so carefully that one rarely gets a glimpse of them; but when they find a man alone and quiet in the woods they sometimes grow inquisitive and try to find out who he is and what he is doing, as all other wild animals do. Tho shyer than deer, for instance, their curiosity sometimes leads them to follow you long distances, which I have never known a deer to do. If, at such times, a man sees them and runs away, under the delusion that he is in danger, they sometimes run after him and bay on his trail, just as a dog naturally follows a man who runs in front of him. And here, by the way, is the probable origin of most of the ferocious stories of men pursued by wolves.

Once, in a snowstorm, when examining some tracks on the shore of a lake, a pack of wolves crossed the ice and entered the woods behind me. They had probably noticed me poking along the shore, and some of the cubs started to investigate. They could see me plainly enough, for I was crouched in the snow without cover of any kind; but, try as I would, I caught only glimpses of vague gray forms flitting like shadows among the trees. After a few moments of this cautious watching, they began to circle, to get to leeward of me, just as a fox does when you approach his sleeping place, especially if you stand still the moment he spies you. Thinking that, if they once got the scent of me, I should never see the wolves again, I started down wind at top speed, bending low and keeping as close to the ice as possible. Instantly a cub gave an eager yelp, and the whole pack came riotously after me. So by alternate running and stopping I tolled them into the open and half way across an arm of the lake. Then, on the farther shore, I sat down under a bush and saw that the old forty-four was in working order. But instantly another side of wolf nature came out. These uncanny brutes have some wireless way of understanding your thoughts and intentions. So long as you are quiet and friendly, they are inquisitive; when you run, they join hilariously in the chase; but when you get ready for business, which is to stop their deer-killing once for all, they seem to understand as if you had sent them a wireless message—which you probably have, tho as yet you have no patent on the instrument. An old wolf left the pack on the open lake, entered the woods swiftly, and I knew as if he had told me that in a moment he would be somewhere behind me, picking information out of the air and sending it out again like a wireless operator. There was absolutely no sound; the lake and woods were as still as the dreaming hills; but the pack received the old wolf's message as surely as if he had made earth echo to his clamor, for suddenly they all turned and scattered into the nearest cover. And all the while I was sitting perfectly quiet and apparently harmless, just as I was when they first saw me. No wonder that the ignorant and superstitious habitants make a loup garou of an animal which seems to read your thoughts and which sends messages by ways that you cannot understand. But I am getting far away from my first trail.

As I ran the back track of the wolf, a story came out that grew more and more fascinating as I unraveled it. All the way from Kearney Lake he had followed me closely, never coming out into the snowshoe trail, but keeping hidden in the woods, till I came in sight of the camp, when he probably watched me until I disappeared, and then turned to rejoin his pack. I will follow later and find out where they are; just now I must run this back trail a little longer to see why he followed me.



On the farther side of Kearney Lake, just after I came out upon the ice at nightfall, my old moose-sled had gone to pieces and I had stopped to lash it together. As I went on, a piece of rope had fallen from the sled and lay beside the trail. The wolf was trotting along after me, following his nose chiefly, when he saw this piece of rope. Here was something new, something that a wolf had never seen before, and, tho it held the man-scent, he must needs find out all about it. He approached it cautiously, thrusting out his nose, nearer and nearer till he seized it and gave it a pull. The other end wiggled and squirmed and he jumped away; but in a moment he came back again. This time he gave

the rope a shake and the end probably whipped over his head. He gave a tremendous jump sidewise, then with a sudden access of courage he pounced on the rope and whirled it up in the air. All over the ice he played with it, throwing it up, catching it, whirling it around and around, and even lying down and rolling over, whacking it with his paws like a kitten. Remembering suddenly that he was following, he dropped the strange plaything and started after me; but after a dozen steps he ran back and came trotting along the trail with the rope in his mouth. All the way across Kearney Lake he played with it at intervals, occasionally leaving it, but always going back to fetch it again. And when I entered the woods he buried the rope carefully, for another time, while he followed my steps to camp. The story was written plainly all over the snow.

Farther back in the woods I found where the pack had first crossed my snowshoe trail. All the wolves had approached it cautiously; for I probably had just passed, and the tracks still reeked with the smell of the man. Every wolf had touched his nose to the trail here and there before he ventured to cross it; but while the rest of the pack swept on to the westward for the night's hunting, this one wolf followed my trail and probably had me in sight for a mile or more, keeping himself well hidden, meanwhile, in the dusk of the winter woods.

I started to follow the trail of the pack from this point; but all the signs showed that they were roving hungrily for food, and the trail wandered so, thru rabbit swamps, over deer ridges, and along hidden brooks and beaver ponds, that I gave it up as an endless job. Instead of trying to unravel all their wanderings, I struck straight westward across lake and forest to pick up the trail of my single wolf after he had left me at camp, knowing that he would lead me by a straight course to his pack. And that suggests another curious bit of wolf lore: that no matter where a wolf is, he seems to know by instinct, or by some sixth or seventh sense, just where the other wolves of his pack are, and can go directly to them at any moment, tho they be hidden miles away in the forest.

As I supposed, the young wolf led me an almost straight course, turning aside only to find the easiest traveling, till he joined his pack, some 4 miles from my camp. Here I made two discoveries. The first was that the wolves had fed well and were now roaming with slow feet and heavy stomachs; the second, that they had been joined by an enormous wolf which was not with them when I had tried to follow their trail earlier that morning. "The loup garou, and he's a monster!" I said exultingly, as I measured his tracks, which were the

THRU A DEER YARD.

largest I have ever found. Folding my fingers at the knuckles, I could easily drop my whole gloved hand into the print of his forefoot; and where the snow was soft he sank deep as a buck at every step. Best of all, he was plainly logy after feeding, and must soon grow sleepy like the others; and I thought that with ordinary luck I would run into the pack long before dark. But first I followed my young wolf, which, instead of going forward with the pack, had taken their back trail swiftly, telling me plainly that he expected food, and that somewhere near at hand another deer

was lying dead on the endless terrible trial of the destroyers.

On the ice of a little wild pond I found a splendid buck, cold and stiff. The trail said that the wolves had jumped him on the ridge above, caught and killed him after a short run, ate what they wanted peaceably enough, and left the rest to the foxes, ravens and other hungry prowlers of the wilderness. Here was an abundance of food for a week or more; yet tonight the wolves would undoubtedly prefer warm flesh, and would chivvy and kill another deer. My gorge rose at the thought of this; for tho a hungry wolf must live, a man must take sides with deer or wolves in the wilderness, just as sooner or later he must choose between birds and wandering cats in his own home orchard. So it seemed to me a most desirable thing to lay the deer and the wolf, the deed and the fellow who did it, side by side when the day was over. Only—our feelings are queer and contradictory at times—I would spare, if possible, the cub wolf that had followed me and played with my rope. He had not rejoined his fellows, but had headed back alone toward Kearney Lake, perhaps to dig up his buried plaything again.

I swung away rapidly now after the pack, expecting to run into them in an hour or two; but had a man been hunting simply for heads or skins, the trail would have spelled hope, vexation, and heartbreak in rapid succession. At first they roamed lazily, as wolves do after eating, keeping a certain general direction as true as a compass, but winding about to make use of every easy runway and safe crossing of the rivers. So they came to an ideal sunny spot to lie up for the day, and my heart began to jump as I circled to leeward and approached it stealthily. But hardly had they reached this place when the very devil of uneasiness seemed to seize them, and they must roam on again. No more easy traveling now. They headed north, and I followed their trail, mile after mile, thru a broken and desperately hard country where I am certain a man never went before, and where no sane man would ever go again.

HERE AN OTTER SLID DOWN A BANK.

I have followed many a hard snowshoe trail, but never did I have such need of a bird's wings or a monkey's arms to help out my natural legs. Only once have I experienced anything to compare with it, and that was when I followed a bear that was making for his winter den, and he doubled thru swamps, crept thru blowdowns, and crossed up and down numberless ridges in the effort to hide his trail. The bear had seen me and knew that I was hot on his trail; while all these cold signs said plainly that the wolves were making medicine while I was making coffee, and had laid out my work long before I had even started to follow them. One got the impression that the uncanny brutes knew, in some way, that on this one day of all the year they would be followed, and straightway laid a trail that must break an enemy's wind and heart. "Oh, that is the loup garou, sure enough," I told myself. "What else would lead this wolf pack to change its habit of easy traveling and go thru an inferno like this?"

The trail of a wolf pack is always a fascinating one to follow, and at first, finding the snowshoeing fairly good, I had given myself up to the full enjoyment of it. Somewhere ahead, I thought, the pack was resting in security, where one might, by good luck and good management, have the opportunity of a lifetime in catching a wolf asleep. Meanwhile, let us get what fun we can out of the trail. As is usual after feeding, the wolves left their records everywhere; but by this time I could tell almost at a glance their regular intelligence offices. These are generally hard, dry stumps scattered at long intervals along the runways, and every wolf will go out of his way to sniff there and get the news, just as one would look for a letter in a country postoffice. If you dig in the snow about these stumps you will finds records going back to the past summer; and if you ever had the rare luck to see a stranger wolf approach, you will see him absolutely lost in contemplation as his nose searches slowly, intently, for every scrap of information. When he goes away he will know exactly what wolves have passed lately and what they had to eat last. Moreover, wolves do not blunder thru the country, nor follow their leader blindly. They are alive and inquisitive at every moment. In this pack, for instance, the loup garou and a big female were generally ahead and a little to one side, while the cubs and yearlings roamed by themselves, and frequently one or more of the latter would go off on a tour of investigation. And to follow their side excursions, and to find what interested them, was part of the fun of trailing. I must give the wolves this credit, too, that tho they prowled thru deeryards and rabbit swamps, they made no attempt whatever to hunt or harry the game.

BACK TO KEARNEY.

Besides this roving record there were many other trails crossed, each one inviting us to stop and read the story. Here it was the deer that already were breaking out of the winter yards and making new paths for better feeding; here the beaver had gone inland cutting and hauling wood over the snow, to replace the bark that had "soured" under water by their lodges; and here an otter, full fed and lazy, had slid down a long bank to the lake and then plowed a long furrow in the snow, too sleepy, evidently, to jump and slide along in his

usual merry way. And no matter what animal you are following, to have an eye for the unexpected, to have always room for the beauty of earth and sky, and to read and understand this new language and literature of the wood folk, is infinitely more enjoyable even to a hunter than to push ahead blindly, intent on a pot-shot.

When the trail entered the rough country northward, all these pleasant side issues had to be abandoned. It needed all one's strength and keenness of eye simply to follow the trail and keep a lookout ahead. The wolves would turn aside and go up a steep rocky incline, sometimes creeping like cats, sometimes taking a six-foot ledge with a single upward jump. When they got to the top the leader would pick out a spot, sit down on his tail with forefeet braced, and slide down on the other side, leaving a chute sometimes thirty feet long, which ended in a great hole in the snow. Here the wolves always followed in single file, each one sitting down on his tail to toboggan after the leader. To follow them you had to get on tiptoe, driving your toes down thru the hole in the snowshoe webs so as to get a grip on the slippery surface, and making use of every convenient tree and shrub to pull yourself up. When you got to the top you must pick out a smooth spot, generally the one used by the wolves, and take off your snowshoes and toboggan down after them. And tho the thermometer was near zero, a couple of hours of this kind of work left one as hot as a haymaker.

So the afternoon passed all too quickly away. The air suddenly darkened, and a snowstorm crept up from the south. Plainly this loup garou was too much for me, and I must now pick out a spot under a ledge where I could build a fire and a *commoosie,* and spend the night. For I was in an unknown and densely wooded country, and to retrace that trail before dark, creeping up the hills that I had slid merrily down, was now out of the question. As I followed the tireless wolf trail along the edge of a steep ledge, I caught the glint of a lake below me and suddenly recognized a place that I had most luckily crossed a week before. My heart jumped at the sight of it. No more desperate scrambling up and down the return trail; I now knew just where I was, and that the old snowshoe track would lead me by easy traveling back to Kearney.

The wolves still showed no signs of weariness or halting. They had slid down the steep ledge, as usual; but as I scanned the woods below I could not see that the trail crossed the valley. As I slipped along the top of the ledge searching the laurel bushes in lingering hope, just as a man waits another minute for a bite at the end of a long day's fishing, a cold moist snowflake touched my cheek with its unmistakable warning. No time to lose if I am to reach camp tonight. So, good-bye, wolves; good-bye, loup garou; you have given me another great chase, and I am satisfied. Then I picked out a smooth slope, took off my snowshoes, and went down like a shot, feet foremost. I landed among the laurels, making the snow fly and half burying myself in a drift; but even before I struck bottom I had a glimpse of something gray below me jumping up like a Jack-in-the-box. Another and another flew up and down. When I landed, with the rumble and thud of a small avalanche, the woods seemed full of wolves, all jumping wildly, and among them one enormous brute that wasted not a second, but went down the slope in astonishing bounds, hitting the earth only occasionally, and shooting up like a rocket, with the snow flying in a cloud about him. After throwing me off the trail he had gone to sleep with perfect security under the ledge, where no enemy could approach unseen; and after trailing him all day long with immense caution, and then giving him up as lost, I had tumbled down like a sack almost on top of him. It is moments like these that make a man believe in luck.

And, speaking of luck, the luckiest thing of all, for me, was the panic that gets into a wild beast's legs and sets him jumping away the moment any unusual or startling thing happens. Here were a dozen great powerful brutes, any one of which could throw a 200-pound buck with a single twist and break his back with a single snap. Had they whirled in on me, I would have had no more chance than a rabbit among them; yet,

like all wild animals, they lost their nerve and scattered like a bevy of quail when I blundered among them. And the lucky thing for the wolves was that I was quite as much surprised and startled as they were. Here, after an all-day chase, was just one lucky instant when a man needed clear eyes and muscles steady as a rock; and in that instant I was squirming like a turtle in the drift, brushing the snow out of my face with one hand, and with the other tugging at the holster, which of course got twisted. By the time my feet were well under me the old revolver was out, and I got one hasty crack at the loup garou, jumping away like a kangaroo among the trees and rocks, and one more at a big dog wolf that, confused by the echoes, turned and went streaking past me up the valley. It was all over in a moment. The dog wolf stayed; but the loup garou was "going strong" at my last glimpse of him —which was the tip of his plume waving *au revoir* as he sailed over a windfall. The next man who follows will learn a lot about the country before he finds him at the end of his trail.

STAMFORD, CONN.

Outdoor Plays and Pageants

A Sketch of the Movement in America

BY HAZEL MACKAYE

[Miss Mackaye has taken part in organizing and directing several outdoor plays and pageants in this country since they have come into vogue. She was one of the Coburn Players, whose principal production, "The Canterbury Pilgrims," was written by her brother, Percy Mackaye, the poet and playwright.—EDITOR.]

IN tracing the history of pageantry in America we must, of necessity, turn to England as the source of our inspiration and tradition. It was a happy coincidence, therefore, and one that augured well for the future, that the first similar revival in England of the Elizabethan pageants should have been participated in by a representative from our own country. In June, 1905, the town of Sherborne, Dorset, England, celebrated its twelve hundredth anniversary in the form of a pageant, the first of its kind for more than three centuries, inviting Sherborn, of Massachusetts, New England, to share in the honors of the occasion. Accordingly, the opening procession was headed by two symbolical figures; one, an elderly woman wearing a crown, who impersonated the old Sherborne, the other, a young girl with the stars and stripes, symbolizing the new Sherborn. A Herald, meanwhile, had proclaimed to the populace an eloquent message beginning as follows:

"From the descendants of those, who with the home feeling strong upon them, gave to their new home in the wilderness the name of Sherborn, to the descendants of our forefathers —greeting."

The burst of prolonged applause in response to this proclamation proved how genuinely moved the listeners had been by the warmth and sincerity of the message.

The last five years have seen an astonishing number of revivals in England, until today there is scarcely a city of importance that has not held its out-of-door spectacle. Those best known to us, perhaps, are the pageants of Oxford and York, preparations for which were in progress for over a year.

It would be wrong, however, to say that all of the ancient festival spirit had been destroyed. A few celebrations still persisted to prove that life had not been entirely extinguished. Lady Godiva continued to ride thru the streets of Coventry, and Guy Fawkes' Day still remained a joy to the countryside.* An-

*This latter festival was transplanted to American soil, and even as late as the years immediately preceding the Civil War the celebration of Guy Fawkes' Day was observed in an old New England town.

other tradition in America is the annual Mardi Gras fête in New Orleans, but that is bequeathed us from Latin sources and hardly represents a national feeling. California has a unique outdoor celebration given by the Bohemian Club, of San Francisco, each year. They have named it "High Jinks," and it is held in the majestic setting of one of California's famous redwood groves. Santa Barbara and Pasadena have also, for many years, held flower festivals, both elaborate and beautiful, but all of these celebrations seem to be sectional rather than national.

It would appear, therefore, that the first pageant in America to arouse a large public interest was the fête given in Cornish, N. H., in honor of the sculptor, Augustus St. Gaudens. This was presented in June, 1905, exactly the same month and year, it is interesting to note, in which the Sherborne pageant was held. The national reputation of Mr. St. Gaudens, together with the prominence of the artists who conceived the pageant and carried it out, made of this festival, comparatively small from the point of view of numbers, not only an epoch-making occasion, but one of rarest beauty. Attired as gods and goddesses with their respective retinues, the people assembled in a grove of great pines on Mr. St. Gaudens's estate. There a play was given, ending with the pres-

THE INDIAN ATTACKS UPON A STOCKADE.
From the Lake Champlain Pageant, July, 1909.

entation of a golden bowl to the sculptor and his wife, who were placed in a chariot drawn by young men and girls and carried to the house, followed by the cheering, vari-colored multitude.

Why this noteworthy effort was not more quickly emulated is difficult to explain, but so far as can be ascertained it was not until three years later that any other outdoor spectable of importance took place. To Boston belongs the credit of the second notable festival. Early in June, 1908, the State Normal School of Massachusetts gave an educational pageant in the courtyard of their new building. This was a well-conceived and executed representation by graphically picturesque groups of different educational ideals, from earliest times until the present day.

Following immediately upon the footsteps of this came the pageant of Philadelphia, in July, 1908, held in honor of the city's two hundred and twenty-fifth anniversary. It took the form of an historical procession in which 5,000 participated, and was viewed by six to eight hundred thousand people. In point of size it was comparable to the pageant given in Quebec, also in July, which aroused much public interest in this country.

It seemed as if the country were only awaiting the signal from these first beacon lights to answer them from town and countryside as by a common impulse. The people had been aroused from their sleep of centuries. Pageantry was in the air.

The season of 1909 opened in May with a festival in Bronxville, N. Y. A commodious amphitheater was the setting for two admirable performances illustrating the history of Westchester County. One of the episodes treated was of Washington Irving, who was represented as receiving the other writers of his day as well as some of his own legendary characters.

New Rochelle, N. Y., followed in June with a pageant representing the landing of the Huguenots. A replica was built of the original ship in which the voyage was made, and as the settlers effected

their landing, they were met on the shore by tribes of Indians.

Next came the festival at Norwich, Conn., in July. This was a double celebration of Independence Day and the two hundred and fiftieth anniversary of the founding of the town. Seventy-five of the townsfolk enacted its Indian history. George Washington and his troops were impersonated in the parade, while the foreign population contributed national floats.

SOME OF THE SIGHTSEERS ON RIVERSIDE DRIVE.
Watching the "Half-Moon" and "Clermont" come up the Hudson River at the Hudson-Fulton Celebration, September, 1909.

At about the same time Lake Champlain gave a pageant on its shores in honor of its discovery three hundred years before by the great French explorer. All the communities along the lake border observed this tercentenary, and a floating stage, upon which the performance was repeated at each spot, was towed from place to place.

The Hudson-Fulton celebration given by the city of New York in September was the most comprehensive and elaborate pageant yet attempted in this country. The number of people participating in the festivities amounted into the millions; a million school children alone were said to have taken part, while the number of people who witnessed the celebration during the two weeks it continued were estimated at about six million. This amazing pageant was held in honor of Hudson's 300th and Fulton's 100th anniversary. The festivities in New York lasted a week. The program included three separate land parades: an historical parade, a military parade and a carnival pageant, besides a water parade, the like of which has probably never before been witnessed. Replicas of the "Half Moon" and the "Clermont" were launched and escorted on their feeble way up the river by a mighty fleet representing eight different nations. After a week of festivities in New York the principal cities along the Hudson celebrated in turn this anniversary, until at last Albany was reached, where the final ceremonies took place.

Two pageants presented in Massachusetts of this same year, 1909, I have purposely not spoken of in their proper sequence, for the reason that they were both unlike the usually accepted idea of the term. Each was founded on a play and was partly professional in character. The first to be given was Schiller's "Joan of Arc" in the Stadium of Harvard University, in the month of June. The other was presented in August by the city of Gloucester, under the artistic direction of Mr. Eric Pape, and was founded on a play, "The Canterbury Pilgrims," by Percy Mackaye. Miss Maude Adams played the title rôle in one case and townsfolk in the other, took part in each of the performances.

The Gloucester pageant had for its setting the bold rock and turf of Stage Fort Park, which fronts upon the harbor. The performance was held at night and the 20,000 spectators were enthralled by the music of a splendid orchestra and a chorus of 500 voices, together with the spectacle of sober pilgrims, gorgeous Crusaders. monks, citizens and peasant folk, who moved across the stage at different intervals in the play.

Much of the mystery and imagination of an outdoor spectacle can be enhanced

"AGAMEMNON OF AESCHYLUS."
Clytemnestra in the center surrounded by the chorus. Given at the Harvard Stadium, June, 1906.

the Harvard performance, giving it the professional touch referred to, while this was also added to the Gloucester pageant by the Coburn Players, who interpreted "The Canterbury Pilgrims." Nevertheless, the people were largely represented in both these spectacles, for 1,200 supernumeraries, made up of students in the by a performance at night. The participators, emerging, as it were, from a cave of velvety dark into the glow of a light which covers only the territory of the stage itself, are at once clothed in an atmosphere of romance and remoteness difficult to realize in the riotous sunlight, where background and pageant are

often indistinguishable. Realizing the dramatic value of this quality of unreality, the professional player, upon entering this field of acting, preferred to give his performances at night, and there are at least two companies today who do this successfully. Mr. Ben Greet was the first actor in this country to give dignity and importance to the outdoor play. Very quickly Mr. Greet grew in fame, until other professionals, equally interested in the idea, soon followed his example. Thus it was that, when the city of Gloucester decided to give a pageant, it had only to enlarge upon the performance of "The Canterbury Pilgrims," which was included in the repertoire of the Coburn Shakespearean Players, an open-air company who have acted before our leading universities and country clubs.

Interesting as it is to note how quickly the al fresco idea was adopted by the theatrical profession, it is even more so to perceive the remarkable interest that it has excited among our universities—pre-eminently those of our women. Smith, Wellesley, Radcliffe, Bryn Mawr, Vassar and other women's colleges of note now give their yearly outdoor play. The English Club at Radcliffe has presented open-air performances of unusual interest—notably that of the "Old Wives' Tale," by George Peele, which was given on the college grounds in May, 1907. This masque, then produced for the first time since its initial performance at the Globe Theater in 1584, is supposed to have strongly influenced Milton to write "Comus." It was fitting, therefore, that two years later, in commemoration of the 300th anniversary of Milton's birth, the English Club should have presented his most famous masque. This was the first performance of "Comus" to be given since the original production before the Earl of Bridgewater in 1634.* The music, which had been especially written for the masque by Henry Lawes, was rendered by Mr. Arnold Dolmetsch, the authority on ancient instruments, and his orchestra, while the play itself was presented before impersonators of the Earl of Bridgewater, the Countess of Derby and the Lady Elizabeth, thus, as nearly as possible, reproducing the conditions under which it was originally performed.

Perhaps the most carefully prepared and elaborate open-air play of a purely collegiate nature was the production of the "Agamemnon" of Æschylus in the spring of 1906 by Harvard students in the Stadium. This was the result of the combined effort of highest scholarship, exhaustive research and masterly directorship, the honor belonging chiefly to the Greek department of the university and to Mr. George Riddell, who together succeeded in giving a rare performance—dignified, profoundly beautiful and moving.

In addition to the pageants and plays already mentioned there have been many others, of less ambitious scope, in towns, schools, institutions and clubs. A pageant of the Renaissance presented in Chicago in 1908, the pageant of the Tree given in Boston last January, and the Colonial pageant held in Springfield, Mass., in March, 1909, were all notable examples of indoor pageantry. During the summer season, Stockbridge and Lenox, Mass.; Bar Harbor, Me.; Onteora, in the Catskills, and East Hampton, Long Island, have given informal festivals with great success. Social settlements in nearly every community have lately shown great activity in organizing pageants for the children, while the Greek Theater in Berkeley, Cal., is a constant reminder that there the open-air performance has come to stay. This surprisingly widespread interest in every form of outdoor spectacle seems to be now focusing itself upon a "safe and and sane" celebration of the Fourth of July. Already several cities have demonstrated the feasibility of such a step, and numerous periodicals, together with the newspapers, are seeking to impress the people with the significance and imperative need of such a celebration.

NEW YORK CITY.

*"Comus" was also given by the University of Cambridge, England, in the summer of 1909, and was recently included in the repertoire of the Donald Robertson Players, of Chicago.

Fox Hunting in the United States

BY HERBERT HENSHAW

[Mr. Henshaw is the editor of Brooklyn *Life* and has written much on American sport in his own periodical as well as in others.—EDITOR.]

EVIDENCE that the exhilarating sport of riding to hounds is gaining steadily in popularity in this country is to be found in many directions: in the growing list of recognized packs, or hunt clubs in the correspondingly increasing number who attend the meets; in the prices paid for hunters and the space that classes for hunters and jumpers occupy in horse show programs, compared with that which they formerly required and in the increasing number and improving quality of the fox hounds both English and American, exhibited at the annual bench show of the Westminster Kennel Club.

AMERICAN FOX HOUNDS.
At Bryn Mawr, Pa.

A more striking indication is the tendency wherever conditions render it possible to subordinate drag hunting to fox hunting, which is a good deal more than mere riding to hounds. The drag is an indispensable substitute where there are no foxes, where conditions make it impossible for the hounds to drive them into the open where horses can follow, or where the time required to draw coverts is a material consideration to the huntsmen. Drag hunting, disdainfully as it is regarded by the true blue huntsman, must therefore continue a very prevalent substitute for fox hunting in this country where, generally speaking, the pursuit of the fox is carried on under much greater difficulties than in England.

Nevertheless it is to be observed that wherever fox hunting or some reasonably good imitation thereof is possible, every effort is made to emphasize the fox hound meets while the meets of the drag hounds, usually held on alternate days,

RIDING TO COVERT WITH THE MEADOW BROOK HOUNDS.
Wheatley Hills, Long Island.

are conducted more or less apologetically and with as little publicity as possible. It should, perhaps, be explained that where both forms of sport are pursued two packs are necessary, as following the aniseed drag dulls the fox hounds power of scent.

To the genuine hunting man, however, the fox is the object of the chase and the horse merely the means of keeping up with the hounds. He may pride himself on riding straight, but fences and ditches are obstacles to be surmounted not opportunities for displaying his prowess. The excitement of the headlong gallop with the hounds in full cry is to him only part of the game. One of the type is quoted as having said that a ride to covert in Leicestershire was better than a run anywhere else in the world, and certainly to every true hunting man the work of the hounds, the varying tones of their voices and the wily maneuvers of the subtle Reynard are essential to and inseparable from the enjoyment of a day in the hunting field.

The instinct of the fox hunter persists very strongly in American blood of the old stock. The existence of the American fox hound as pure breed, the perpetuation of which has been due to the pride taken in the animal by the American farmer, alone testifies to this; but natural conditions in this country have been inimical to any such highly organized development of the sport as has taken place in England. The American fox hound is probably similar to the animal from which the larger and more powerful English fox hound of the present day was evolved, and the difference between the two perhaps in a way represents the relative difference between the sport as now carried on in the two countries. In the South alone, perhaps only in Maryland and Virginia, has hunting with hounds and horses any traditions. George Washington maintained a kennel of hounds at Mount Vernon and hunted with his neighbors in very much the same manner as hunting was then carried on in England, and ever since the farmers of Maryland and Virginia have owned hounds and hunted more or less not with organized packs but with any thing from a single hound or couple to a mixt pack contributed to by the different participants in the chase. The Northern farmers have been compelled to hunt their hounds on foot and it may be of interest to note that at the easterly end of Long Island, and doubtless elsewhere, they have practised for generations a form of drag which consists of trailing a dead fox across country and throwing their hounds in on the scent, the object,

of course, being to test the relative speed of the animals on which, of course, there is much wagering.

Everywhere the native farmers, generally speaking, show a predisposition in favor of the organized hunts, which are of comparatively recent origin, but nowhere is there any of that sentiment against shooting foxes which has done so much to conserve the sport in England. This fact, coupled with the difference between an old country agriculturally developed to the fullest extent and a new and more or less undeveloped one, is fundamentally responsible for the difference between fox hunting in England and America. The famous shires of England, where the historic Belooir Cattesmore, Quorn and Pytchly packs hunt. are grazing regions dotted with small coverts, like islands in an ocean of green sward. The size of these coverts, which have been preserved like the foxes, is such that they can be drawn without difficulty, and the fox once driven into the open makes for another covert. These are the ideal conditions for hunting, but as a further insurance against blank days, earth stoppers are sent out in the early morning preceding a hunt to close the entrances to the foxes' lairs in the coverts selected to be drawn, so that Reynard shall find his home barred to him when he returns from his nocturnal marauding.

Here we have no country where the coverts are of such limited extent that earth stopping is practicable, and where conditions most nearly approximate the English ideal there are apt to be few foxes. Hence the method of hunting in this country is primitive compared with that employed in England; more time is lost in drawing the covers, the fox more often gets to earth, and the field is lucky if a number are not started before one can be induced to break cover for an extended run. There is no denying the fact that men who have hunted with such packs as the Green Spring Valley, Loudon and Elkridge in Maryland, and the Blue Ridge, Warrenton and Keswick in Virginia show a disposition to smile at the mention of fox hunting in the North. Nevertheless, the Genesee Valley Hunt of the northwestern part of this State has a high reputation for the successful pursuit of the fox, and the fact that it has practically abandoned the drag testifies to its success.

However, there are upward of forty-five recognized packs in the Atlantic

ENGLISH FOX HOUNDS.
At West Chester, Pa. One of the best English packs in this country.

States, and among them there are a number with whom Englishmen brought up on the best traditions of the sport esteem it a privilege to hunt. Such Englishmen complain of bloated fields and the decadence of the true hunting spirit at home. Here, at least in the South, they find congenial spirits, not merely daring horsemen and good horses, but men skilled in working woodland coverts and imbued with the old spirit. The hunting in the shires has become so fashionable that fields of 400, who jostle and crowd each other at the fences, are no uncommon sight, and a large percentage of the riders are city men who, whether they ride ill or well, are not huntsmen in any true sense of the word. Here a field of fifty is an unusually large one.

Needless to say, fox hunting is an expensive sport. The man who hunts regularly with a fast pack in a good country and wants to be up with the hounds must have from four to six good hunters, and the best Canadian or Kentucky hunters cost from $1,000 to $1,500, while the best English and Irish thorobreds command still higher prices. The expenses of the hunt fall heavily on the master of the hounds. Formerly in England the packs were wholly maintained by the noblemen or landed gentry who hunted them, but nowadays the expenses are partially defrayed by subscription or passing the hat among those who hunt regularly. In this country the club members pay regular dues, which, however, do not defray the cost, the deficit being made up by the M. F. H. or voluntary contributions from wealthy patrons. The expenses include the wages of hunt servants, including two whips and the maintenance of their horses, a kennel master and subordinates. In England a professional huntsman is frequently employed, but here the master usually hunts the hounds himself. Damages to crops or fences, and in England losses sustained by farmers thru depredations by foxes, are apt to constitute a considerable item. The cost of maintaining packs in this country is so variable that it is impossible to state an approximate average figure. It is said that the late P. F. Collier spent $40,000 during one year's mastership of the Meadow Brook pack on Long Island, but doubtless much of this was expended in incidental entertaining. In England some years years ago the figure was placed at not less than £620 a year for each day a week the pack was hunted during the season, which would be $15,500 a year for a five day a week hunt; but the cost has undoubtedly advanced greatly since these figures were given.

BROOKLYN, N. Y.

A situation peculiarly American.

Literature

Traveler's Tales

THE travel season is never closed, in reality or in books. In midwinter we can go in search of a perfect day in June by taking a comfortable little journey by steamer or train, or, simpler yet, by opening a book in our easy chair by the fire; and in August we can breathe the bracing air of northern latitudes by following the same simple methods. We can loaf and invite our souls, after a week's grueling work, with the same slight expenditure of effort, or spice our ease with sport and adventure in person or by proxy in the pages that fall from the presses in an endless succession of books. One wonders if the psychology of this class of publishing could not be most satisfactorily worked out on the theory of contrasts; if it would not be most advantageous for publishers and authors, and readers, too, if books on Labrador and Siberia and the Arctic regions were issued in late spring only, and works on Florida, British East Africa and the tropics and sub-tropics generally, in early winter. The free literature of railroad and steamship companies, and of the enterprising hotel keeper, is already handled on this plan, and mighty effective and beguiling literature it is.

The haphazard custom of the business of book publishing now in vogue brings us this late spring an armful of books which, regardless of temperatures to come, take us indiscriminately into the tropics and sub-tropics, up into Kamchatka, and, for good measure, thrice around the wide, wide world. We can take our choice of reading according to our preference for allopathic or homeopathic measures in matters climatic, and to our susceptibility to suggestion.

Travel in America first. Mr. Clifton Johnson is most decidedly in season with his latest addition to his Picturesque River Series. The *Picturesque Saint Lawrence*[1] will hardly require recommendation to those who know his earlier "Picturesque Hudson." There is always room in the vacationist's outfit for little volumes like these, which repay in every page the time bestowed upon them with increased and widened interest and enjoyment. A thread of history, a gentle insistence on what is most worth seeing and seeking out, and why, a constant alertness for aspects and details that might be easily overlooked made Mr. Johnson one of the best possible traveling companions to be found in books. There lies the difference; he is not a guide, conscientious and dry and uninspiring, but an enthusiastic companion, who yet is ready at any moment to retire into the background or drop out of the company. The trip once taken, one will be sure to turn to him again to refresh the memory; or, if one be forced by circumstance to do his traveling in the easy chair alone, he is the best of lecturers, who lacks only the moving pictures. Not that illustrations are wanting in his little book, and wisely chosen they are.

Mr. Charles Frederick Holder's *Recreations of a Sportsman on the Pacific Coast*[2] is a book for all seasons and temperatures. It can be read with pleasure and profit wherever there is water and the blue sky above it, and the sun radiant upon it; on the Maine coast in summer, in Florida in winter, in the North Woods in the fall. A book of sport it is, mostly of fishing in trout streams in Oregon and California or in the mighty waters of the Pacific, but beyond that it is a *plein air* book, a refreshing, reviving tonic after the confinement of office and desk.

Mr. Holder tells us of the giant cacti of Mexico; Mr. Dillon Wallace, the explorer of Labrador, takes a mighty step from its frozen barrens southward in *Beyond the Mexican Sierras*[3]. Mexico has been written about with amazing

fluency of late; this addition to the literature of our neighbor republic deals with its least familiar part, the southern portion of Sonora, all of Sinaloa, and the Territory of Tepic, virgin soil for the American traveler, sportsman and business man. Mr. Wallace waxes eloquent over the charms, notwithstanding the discomforts, of this primitive section of the country, where modern civilization has not yet had time or opportunity to penetrate. His discovery is not, however, so rare as he believes. This was, no doubt, his first venture into the sub-tropics. What he found, both of charm and of discomfort, is found also elsewhere in Central America, and down to the Equator in South America as well. It is the dreamy, slow-moving individuality of "Indo-America," as Mr. Frederick Palmer calls it, between which, he adds, and Latin-America there is a vast difference, the difference of the white man and the subdued red.

Do not let the sub-title of Mr. and Mrs. C. William Beebe's book deter you. No matter if ornithology be a science in which you take no interest, *Our Search for a Wilderness*[4] will hold you to the end with the spell of its novelty, for here is real novelty, a real unexplored region whose delights are communicated to you with the unerring, simple touch of genuine personal enjoyment. Mr. Beebe, who is curator of birds in the New York Zoölogical Park, went in search of specimens into the coast wilderness of Venezuela and British Guiana, and Mrs. Beebe accompanied him. They penetrated the mangrove jungles of the Orinoco delta and went up to the great Pitch Lake, of international diplomatic fame, then entered the wilderness of the British colony on a second and third and fourth expedition, in search of gold as well as birds. Whether they be writing of these or of the life of the jungle, the beauty of its vegetation or the virtues of its silent Indians, masters of woodcraft, the authors never fail to be picturesquely and adventurously interesting. One of the most satisfactory trips one can ever make by proxy in that armchair.

A humorous, competent, observant

American school teacher gives us in *A Woman's Impressions of the Philippines*[5] her opinion of the islands, and especially of the Filipinos, and of the basic traits that decide the direction in which their changing ideas shoot under the influence of a new civilization. Her analysis of the Filipino character alone makes this book worth while, especially as her sense of humor does not forsake her even in the most serious moments of racial psychology, but there is a great deal of vivid description of the ways and makeshifts, the comforts and discomforts of the life of the civil and military service in the islands that makes the book good light reading.

After forty years, during which it has been in constant demand, as he informs us, Mr. George Kennan's *Tent Life in Siberia*[6] is issued in a revised, illustrated and much enlarged edition. The aim of the expedition, that of surveying for the purpose of a cable via Bering Strait to Europe after the failure of the first transatlantic cable, is already a bit of forgotten history. The book remains, however, and is as readable today as it was in the seventies, for it reflects the never-failing stimulus of adventure and danger and privation and struggle among frozen solitudes and primitive peoples.

The Mediterranean trip has been described so often that further attempts can only result in repetition. Mr. Albert Bigelow Paine has taken Mark Twain's "Innocents Abroad" as his remote, but acknowledged model, but his humor is somewhat monotonous, and never sparkling. *The Ship-Dwellers*[7] will, however, serve about as well as many of its predecessors as a description of the voyage.

Of Grace Maxine Stein's *Glimpses Around the World*[8] it will suffice to say that it is a superfluous book. It is utterly unimportant and hopelessly amateurish, both as a book of travel and as a piece of writing. Its pages are illumined here and there, however, by bits of completely unconscious humor.

But the next volume of this medley,

Sport and Travel in the Far East[9] cannot be criticised for dealing with trite scenes, Kashmier, Baltistan, the Malay jungle and New Zealand are not overrun with personally conducted tourists, and not all of us have had a shot at tiger, ibex, markhar or sharpu. Accordingly, we are all the more anxious to know just how to go about it to get a shot at them in case we happen upon them some time. Mr. Grew very appropriately introduces his book with Kipling's lines, "Who hath smelt wood-smoke at twilight? Who hath heard the birch-log burning? Who is quick to read the noises of the night? Let him follow——" for much of his travel is in Kipling territory. He has nothing of the Kipling knack of picturesque description, but he writes clearly and to the point, and his eighty photographs add interest to the narrative.

Hunting with a camera and for birds rather than tigers will be more to the taste of most of us, and in this new sport we can have no better guide than Mr. Job.[10] Those who have admired the avian snapshots which have illustrated his former books have wondered how he got them. Here he tells the secret, in so far as such a secret can be told—that is, he gives full directions as to what camera to use, methods of approach, the proper exposure, etc. Mr. Job has the curious idea that live birds in the open are just as interesting as dead birds in the museum and aims especially to interest young people at home or school in this study.

Among the new summer books we find a volume by Thoreau, and quite properly to be so classed, altho it was written more than fifty years ago, for these *Notes on New England Birds*[11] have been gathered from the fourteen volumes of Thoreau's "Journal," and so is new to all except the Thoreau experts. Thoreau has enticed more Americans into the woods than any other nature-lover, and his book will increase the number of his followers. A map of Concord and vicinity as it was in his time enables the disciple to retrace his woodland rambles. A few square miles is range enough for the study and recreation of a lifetime evidently. If we had the use of our eyes and legs as he had, we would have less need for railroads and steamboats to bring us into strange and interesting scenes.

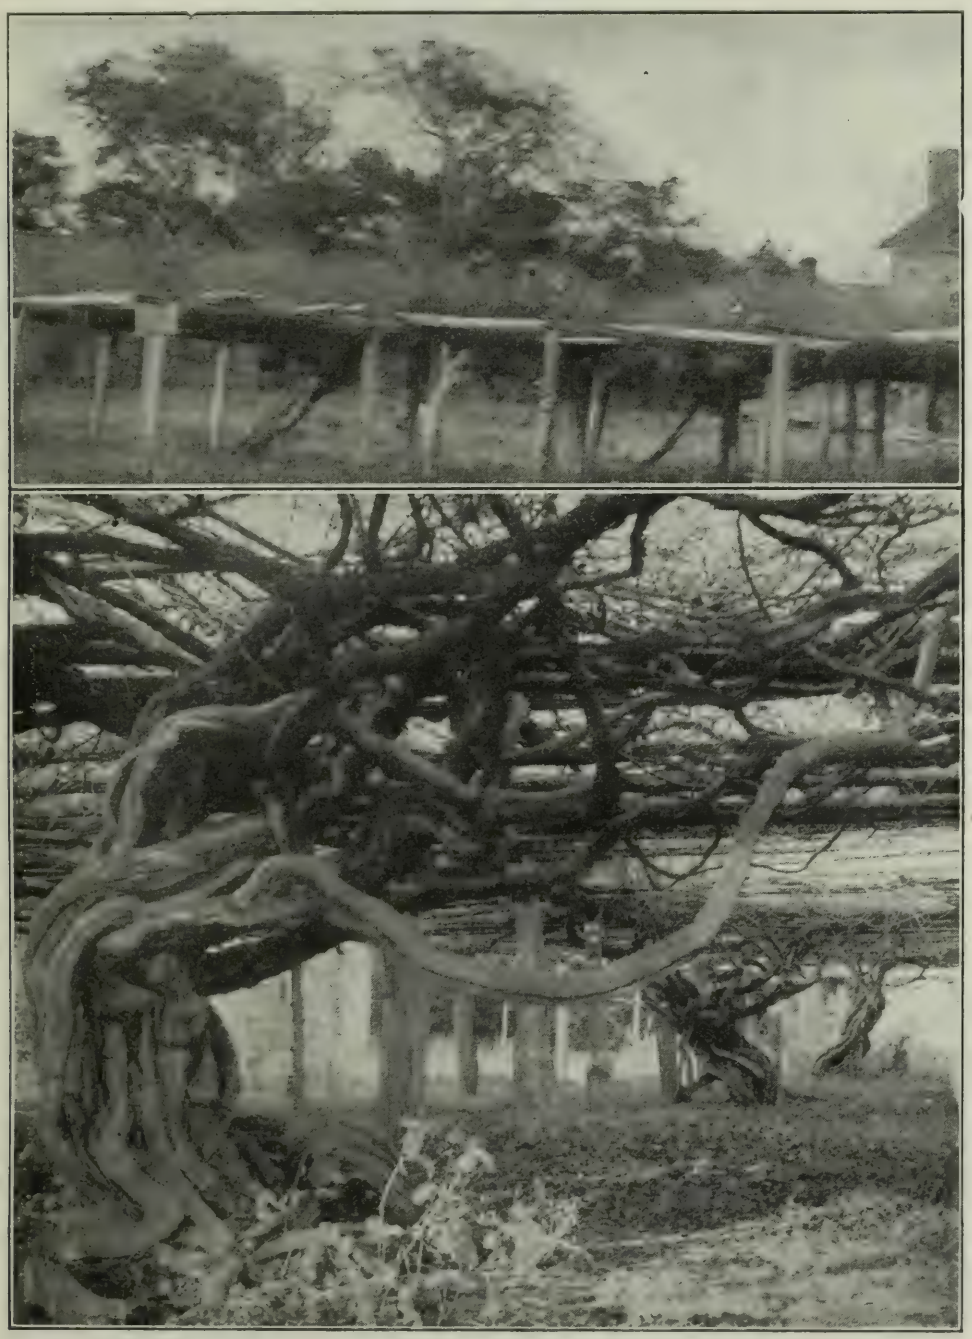
Garden Books



EVERY summer, before the flowers bloom, we have the new garden books. This year is no exception, for we can now say of Americans, as Sir Thomas More said of Englishmen, "They set great store by their gardens." *The History of Gardening in England*[1] is a most thoro and comprehensive account of English gardening, from the time of the Roman conquest to the present, and is the only work of reference on the subject. Monastic gardens of the thirteenth, fourteenth and fifteenth centuries, with their special features, are faithfully described; also gardens of the different reigns, from early Tudor gardens to the Victorian period, showing the various influences—Italian, Dutch and French. Much space is given to the influence of Le Notre and the question whether he really visited England. His plans were carried out by his nephew, Claude Desgots, who did work for the Earl of Portland. A careful account is given of the landscape gardening periods and the work of Kent and Brown, who was called Capability Brown, because he would always say a place had great capabilities. He hated a straight line and destroyed many noble avenues of trees to make his landscape gardens. In the nineteenth century the great advance in the variety of plants and vegetables is noted. Robert Fortune brought many flowers from China. India, Burma and Africa have all in this century sent a great supply of new plants and flowers. The later features of color effects and wild gardens, the opposite of landscape gardening, are fully described. This is an extremely valuable book, full of garden lore, written with literary feeling, and does not lack poetic quotations. It is profusely illustrated with quaint pictures of old gardens, modern Vic-

[1] THE HISTORY OF GARDENING IN ENGLAND. *By the Hon. Evelyn Cecil.* New York: E. P. Dutton & Co. $3.50.

torian and Italian, and it even introduces the modern rock gardens.

The practical information that the owner of trees needs Mr. Fernow gives in *Care of Trees*.[2] The book begins with the nature and growth of trees, tells of their diseases, how to trim them and how to control parasites, with chapters on tree spraying and esthetic forestry. Nearly half of the book is given to the care and choice of trees for planting grounds or parks. It is a useful practical book, by a well-known authority.

L. H. Bailey, professor of horticulture at Cornell University, has sent out many books besides his "Cyclopedia of American Horticulture." This *Manual of Gardening*[3] is a condensed cyclopedia. It begins with plans for grounds, then gives care of soil, garden tools, tending and handling of plants, their protection from pests, lists of plants and

vegetables. The book is profusely illustrated, so that one could almost do without any other gardener's implement, flower and seed catalogs. Altho Professor Bailey discourages carpet beds, he gives designs for them and lists of plants to fill them. At the end of the volume is a list of tasks that must be done for every month of the year. It is a very comprehensive manual.

A Manual of Practical Farming[4] is written to aid the practical farmer and agriculturist. It treats of the care of the soil, tells how to raise the various crops, and gives rules for crop rotation. The last half of the work is devoted to animal husbandry. Dairy cattle, the horse, the sheep and the pig are all fully treated. Different breeds of poultry are described, with the merits and demerits of each, and directions are also given for the care of orchards.

In a practical way *Indoor Gardening*[5] gives the information needed by one keeping house plants thru the winter. The soil, potting and repotting, fertilizers, insect enemies, plant propagation —almost everything connected with house plants is carefully treated. Directions are given for watering plants, but no mention is made of the best time to water them in winter, which is just before the greatest heat of the day, between 11 and 12 o'clock. In summer plants are watered at night or in the early morning, so that the water will not be taken by the sun, but will feed the plant. Indoors in winter the water before midday discourages red spider and aphis, and the moist air at that time makes the daily temperature less variable. This book gives directions for the care of both the usual and the rare house plants.

Among School Gardens[6] was written at the request of the Russell Sage Foundation, and gives the history of school gardens. Henry Lincoln Clapp, master of the George Putnam School, Roxbury, was sent to Europe by the Boston Horticultural Society to study school gardens, and he started the first school garden of wild flowers, which still exists and has 150 native wild

plants. Different school gardens in the United States and the British Provinces are described, and directions are given for planning and cultivating school gardens, beginning with the care of the soil and the cost of equipment, with further instructions how to carry on these gardens. It is a book for teachers and is full of reliable information. It ends with a good arbor day hymn.

The theory and use of children's gardens are first treated, and then the writer of *Children's Gardens*[7] tells how to lay out gardens and how to teach and control from fifty to five hundred children at work in a garden. The book is useful and very practical, not only for teachers, but for parents who would like to train their children in garden work and wish to know the latest methods of teaching. Mr. Parsons dedicates the book to his mother, Mrs. Henry Parsons, founder of the first children's school farm in New York. The illustrations are from the author's own school work.

Little Gardens for Boys and Girls[8] is a good book to give an intelligent child who wishes to make a garden. It is not written for teachers, but for children. The parents had better also read it, for fear the child may grow more gardenwise than the parents; and read with it Mr. Parsons's "Children's Gardens," which gives simple tools and methods.

The ordinary botanical manual is not quite suited to the needs of the garden-lover. It has much in it that does not concern him, and at the same time it is far from adequate in its treatment of the complicated and perplexing varieties of cultivated plants. Harriet L. Keeler's *Our Garden Flowers*[9] is designed to supply this lack, giving carefully worded descriptions of all the annual and perennial flowering herbs commonly found in a hardy garden, some five hundred altogether. A conspicuous and important feature of the volume are the illustrations, 96 photographs and 186 drawings, both just what are needed for the identification of the flowers described, not mere pretty pictures selected regardless of illustrative value, such as are too often found in "nature books."

After all this prose comes properly

field as Mr. Scott's, should have so few poems in common with it.

Woodland Paths. By Winthrop Packard. Boston: Small, Maynard & Company. $1.20.

A lovable little book by a nature lover is *Woodland Paths,* in which every aspect of a New England spring has its place. The shy and reticent season needs a keen eye to discover its reluctant approach. Mr. Packard knows his woodland well, and it is a joy to wander along its vernal paths with so forest-wise a guide. He tells us about the birds and their ways; the wind and its uses; the wild flowers and other shy folk of wood and field. His description of the flight of the blue heron and of the beauty of the flowering dogwood lingers in the memory as sweetly as a strain of gentle music. The author is wise about butterflies, too, and all the winged flocks that feed upon spring flower pastures flutter around him as he walks the woodpath with wide-open eyes.

Literary Notes

....The library of books on golf still increases with every season's output of the publishers. The most recent volume is by Marshall Whitlatch, who first considered golf only a pastime for mollycoddles, but was later won over by the charms of the game. The book gives general advice to the beginner, and also deals with the more technical features of golf. Illustrated with many photographs and diagrams. (Outing Pub. Co. $2.)

....Tourists who wish to explore the lesser known parts of the Mediterranean coasts will find Bruce Millard's *The Mediterranean Cruise* (Putnam, $2.25) a convenient handbook. It is half a guide and half a narrative of personal experiences in Morocco, Algeria, Egypt, Palestine, Turkey, Greece and the islands, illustrated with numerous small half-tones and profusely and capriciously besprinkled with black letter.

....*The Scientific American Hand-Book of Travel*, which appears just in time to catch the attention of the transatlantic tourist, is a heavy volume, quite too heavy to be taken literally as a "hand-book," but packed full of miscellaneous information, much of it not to be found in the usual guides to Europe. A large part of it is devoted to the sea voyage, giving descriptions of ships, methods of navigation, cable codes, signals with color plates of flags, etc. Another novel feature is the advice to automobilists, with maps of tours and the regulations of the different countries. London and Paris are the two cities described. In fact, it would take a good deal of space merely to mention all the topics included, but the material has been picked up here and there and thrown together without any apparent order. The volume is profusely illustrated with half-tones and maps. (Munn & Co., New York, $2).

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Bravest of the Brave

"NEW occasions teach new duties" and modern inventions demand new forms of heroism. Those who soar in the air on canvas pinions and those who go down under the sea in ships must have the cool-headedness to cope with unprecedented emergencies and the courage to meet death in strange guises. We believe that we cannot put this page to better use than to print in full the official report of Lieutenant-Commander Sakuma to his Government in regard to the sinking of the submarine boat under his command in Hiroshima Bay on April 15. Fourteen men were submerged in the steel trap; the water rising about their feet; the pumps useless; the electric lights out; the air exhausted by their breathing and vitiated by the gasoline vapors and the electrolytic gases; no hope of escape; nothing to do but wait for death. They had not to wait long, for two hours and forty minutes after the vessel sank the last words of his report are traced by the failing hand of Lieutenant Sakuma. In the conning tower he sat, after it was seen that death was inevitable, and calmly noted the progress of events as a physician dying of an incurable disease may describe his symptoms up to the last moment for the benefit of science. Sakuma's only worry appears to have been lest the disaster should interfere with further experimentation with submarines. We may be sure that it will not so long as Japan breeds men of his temper.

But it should be, as he wished, an incentive to the improvement of submarines so that such accidents may be avoided in the future. Extra valves and pumps might be provided to take the place of those broken or disabled as in this case. The air might be renewed by chemicals that absorb carbonic acid gas and give off oxygen. And methods of escape might be arranged, say thru the torpedo tubes, by which the crew might get a chance of life by rising to the surface.

The Japanese Government gives out the report with the assurance that no alterations have been made in it. The commander begins with an apology for the accident, taking upon himself all responsibility. With true military punctilio he expresses the fear lest he may not get the names of his superior officers in the order of their rank. The list is not completed, for as he writes the name of "Captain Nakano" and notes the time he succumbs to suffocation.

"Altho there is, indeed, no excuse to make for the sinking of His Imperial Majesty's Submarine No. 6, and for the doing away of subordinates thru my heedlessness, all on the boat have discharged their duties well and in everything acted calmly until death. Altho we are departing in pursuance of our duty to the State, the only regret we have is due to anxiety lest the men of the world may misunderstand the matter and that thereby a blow may be given to the future development of submarines. Gentlemen, we hope you will be increasingly diligent without misunderstanding [the cause of this accident] and that you will devote your full strength to investigate everything and so ensure the future development of submarines. If this is done we shall have nothing to regret.

"While going thru gasoline submarine exercise, we submerged too far and, when we attempted to shut the sluice valve, the chain gave way. Then we tried to close the sluice valve by hand, but it was then too late, the rear part filled with water and the boat sank at an angle of about 25 degrees. The boat rested on the bottom at an incline of about 13 degrees. The switchboard being under water, the electric lights gave out. Offensive gas developed and respiration became difficult. At

about 10 a. m. on the 15th the boat sank and in this offensive gas we endeavored to expel the water with a hand pump.

"As the vessel was being submerged, we expelled the water from the main tank. The light having gone out the gauge cannot be seen, but we know that the water has been expelled from the main tank. We cannot use the electric current entirely. The electric liquid is overflowing but no salt water has entered, and chlorine gas has not developed. We only rely upon the hand pump now.

"The above has been written under the light of the conning tower, when it was 11.45 o'clock. We are now soaked by the water that has made its way in. Our clothes are pretty wet and we feel cold.

"I had always been used to warn my shipmates that their behavior should always be calm and cautious while brave, otherwise we could not hope for development and progress, and that, at the same time, one should not cultivate excessive caution lest the work should be retarded. People may be tempted to ridicule this after this failure, but I am perfectly confident that my previous words have not been mistaken.

"The depth gauge of the conning tower indicates 52, and despite the endeavor to expel the water, the pump stopped and did not work after 12 o'clock. The depth in this neighborhood being 10 fathoms, the reading may be correct.

"The officers and men of submarines must be appointed from the bravest of the brave, or there will be annoyance in cases like this. Happily all the members of this crew have discharged their duties well, and I feel satisfied.

"I have always expected death whenever I left my home, and therefore my will is already in the drawer at Karasaki. (This remark refers only to my private affairs, and it is not necessary. Messrs Taguchi and Asami please inform my father of this.)

'I respectfully beg to say to His Majesty, that I respectfully request that none of the families left by my subordinates shall suffer. The only thing I am anxious about now is this.

"Please convey my compliments to the following gentlemen. (The order may not be proper.) Minister Saito, Vice-Admiral Shimamura, Vice-Admiral Fujii, Rear-Admiral Nawa, Vice-Admiral Yamashita, Rear-Admiral Narita. (Atmospheric pressure is increasing and I feel as if my tympanum were breaking.) Captain Oguri, Captain Ide, Commander Matsumura (Junichi), Captain Matsumura (Riu), Commander Matsumura (Kiku)—my elder brother. Captain Funakoshi, Instructor Narita Kotaro, Instructor Ikuta Kokinji.

"12.30 o'clock, respiration is extraordinarily difficult.

"I mean I am breathing gasoline. I am intoxicated with gasoline.

"Captain Nakano.

"It is 12.40 o'clock."

So died Lieutenant-Commander Sakuma and his thirteen unnamed companions. It was not in the passion of battle, when it seemed glorious to die for one's country, but in time of peace, in the full flush of health, caught in the inevitable remorselessness of fate, lingering unseen, unsupported, uncomforted, unpraised, till suffocation should extinguish life. And yet no man flinched; all sank as Samurais, holding to the bushido of duty, as filling to the end their service to their country. And Commander Sakuma thought not of himself, scarcely even of his father, only of the honor and glory of Nippon. So, with the last gasping breath he made his dutiful report, and gave his word of courage, and his farewells. It is a rare and glorious record, but we have had other such of men dying imprisoned in mines, when rescue came too late; for human nature has in it something divine, and the nobly trained soul will show its divinity in extreme stress. Commander Sakuma's plain record, how he and his men did their duty and died, goes round the world to hearten tested souls, and to prove that "simpleness and gentleness and honor" are everywhere latent or patent in humanity, ready to appear in him, in war or peace,

"Who had done his work and held his peace,
and had no fear to die."

The Ballinger Inquiry

In the latter part of the Ballinger investigation the original issues were laid aside, or obscured by a mass of testimony relating to the motives of various persons and to certain errors of procedure on the part of what may be called the defense. The purpose of the inquiry was to ascertain by an examination of the record and of witnesses whether Mr. Ballinger, as Secretary of the Interior, had been a competent and honest officer, serving faithfully the public interest. A strong man of unquestioned integrity is needed at the head of the Interior Department, a man committed to the policy of a just and reasonable conservation of those natural resources which are still under the control of the national Government. The investigation is finished and the arguments have been made. Secretary Ballinger has not been convicted, nor has he been vindicated. There was no evi-

dence that he had been corrupt, no proof that he had wrongfully diverted public land, or power sites, or coal deposits into private hands. On the other hand, there was no proof that he was properly qualified for the office he holds or for any place in the Cabinet.

It is clear, we think, that he was not in sympathy with the earnest advocates of that policy of conservation which had been defined and supported by Mr. Taft's predecessor and certain officers who worked with him. There was much in the record of Mr. Ballinger's associations and conduct that tended to excite suspicion that he was inclined to favor private interests rather than those of the public. There are some who think that he was restrained from favoring private interests only by the protests, complaints and charges which caused the dismissal of Glavis and Pinchot and led to this investigation. But the record, as it stands, does not show that he served private interests by official action. The Secretary of the Interior should not be a man whose conduct at any time affords ground for suspicion that he is at heart inclined to sacrifice the interests of the people in any case in which those interests are at variance with the claims or desires or projects of speculators or powerful corporations.

The verdict of a great many careful observers will probably be that Mr. Ballinger's conduct and associations afforded some ground for distrust, and that the investigation, while it has disclosed no actual wrongdoing on his part in his official capacity, has shown that he is not the right man for the place. If he had been the right man there would have been no controversy with Glavis or with Pinchot, both of whom, we are convinced, were faithful servants of the people, altho they may not always have acted wisely. If he had been properly qualified for his high office, Mr. Taft's Administration would have escaped the somewhat disagreeable consequences of this investigation. For everybody knows that the Administration has suffered some discredit by reason of it, while all just and intelligent men also are confident that the President is surely faithful to the policies which the accusers of Mr. Ballinger earnestly defend.

It is said that the Secretary will resign after the committee reports shall have been made known. We hope this is true. In all probability, those reports will say that he has been guilty of no corrupt or otherwise wrongful act, altho some members of the committee will criticise his course. With such findings before the public he can afford to withdraw, and the Administration will be relieved by his retirement. Great care should be used in filling the vacancy, if one is to be made in this way. In appointing a new Secretary of the Interior, Mr. Taft should strive very earnestly to find the right man and to strengthen his Cabinet. Both the Cabinet and the Interior Department need a larger and better man than Mr. Ballinger. This investigation proves that the President has been poorly served by some of his official advisers.

The investigation should lead Congress to pass the Administration's land reform bills. In various ways it has shown the need of them. Not one of these bills has become a law. Our statutes relating to the public lands have long been out of date. Their character has suggested and promoted fraud. For the curious neglect by Congress of the reform bills at the present session there can be no satisfactory excuse.

The Heresy Charge in the General Assembly

THE times change and we with them. The Presbyterian Church and all the other Churches have learned much since the great heresy trial which drove Professor Briggs to the Episcopal Church and Prof. Henry P. Smith to the Congregationalists. The charges brought against young Mr. Black, or, rather, against the presbytery which ordained him and the synod which approved, were more serious than those for which Professor Briggs was sacrificed. The young man was not ready to assert his belief in the virgin birth, nor in the miracle of Lazarus, nor in the physical resurrection of Jesus Christ; and yet the General Assembly was not willing to have a trial, and the Judicial Commission to whom the case was referred unanimously reported—and the Assembly accepted it—that no case had been made out, and allowed it to go that the young man

simply had a less degree of confidence in the virgin birth than in other essential doctrines. It is to be presumed that it was the same with the two other points, altho they were passed over in silence; but the Assembly warned presbyteries to be careful in examinations in future. But they will not in future feel obliged to exercise more stringency than did the General Assembly.

This refusal to enter into a trial is not to be taken as a proof that any large number of Presbyterians doubt on these matters, as to which doubt is very nearly as serious as denial; but rather as evidence that they look on statements of doctrine as much less important than did their fathers. This is no day for dogmatic theology. We no longer repeat: "Which if a man do not believe, without doubt he shall perish everlastingly." They are interested in duty much more than in belief. They generally believe in the virgin birth, but they do not care so much about it.

And why should they? What is its importance? Let us come down to the radical, essential, basic essence of religion. What is it? Is it anything whatever that a man believes which will make him acceptable to God? Is it anything that a man believes *about* God, or about Jesus Christ, or about the atonement, or about heaven or hell? That is, is it any intellectual conclusion, based on good or bad reasons, taught by parents or books or preachers, or worked out for one's self; or is it the attitude of the heart, the will, the character, the life? Is a man religious and saved because he believes just right, or approximately right, as to the triunity of the Godhead or the miraculous birth of our Lord; or is it because he tries to live the life of God and of His Son Jesus Christ, or even tries to live a life of the character which we assign to God? The latter is the teaching of nine-tenths of the Bible, and is consistent with the other tenth.

Now let us take the charge which the three accusers of their brethren brought against the Presbytery and the Synod of New York. They wept—or one of them did—because the young minister was not certain of the virgin birth! But how does anybody know? Because the Bible says so. But how did Matthew and Luke know? Why, because they had a special revelation on that point from the Holy Spirit. But how do you know they had any such special revelation? That is a question under discussion. We are believing nowadays that the authorship and credibility of the sixty-six books of the Bible must be tested just as much as any other good books, and by that test they must stand or fall. Matthew and Luke nowhere claim such a revelation. For aught we know they took it from the belief of the Church of their day, whether fact or not. They do not say that Mary ever told them the story. Joseph was dead, Zacharias was dead, Elizabeth was dead, Anna was dead, probably Mary died as much as fifty years before, and the brethren of Jesus did not believe on him. It is a perfectly fair thing for a Christian man to raise the question, and he may honestly remain in doubt. He is very liable to remain in doubt unless he has acquired a very stiff doctrine of inspiration.

Now what will happen to him as a religious man, or a Christian man, if he lacks assurance as to the virgin birth? Certainly it need not make him love the less the character of Jesus Christ or the less follow his teachings. To us, as bearing on our character and life, it is perfectly indifferent whether Jesus had or had not a human father. Paul did not think enough of it to allude to it in his recorded teachings. Whether he knew of it or not we don't know; his letters were written before the Gospels; and Mark and John and Peter and James and Jude say nothing about it. What they talked about was religion, about life and character. They would have us seek the mind that was in Jesus, that is, the character. That is what makes one a Christian. To be sure, we have all been taught the story of the miraculous conception, and the miracle does not seem incredible; but its evidence hangs on a doctrine of inspiration which may be doubted or denied; and no Church has the Christian right to reject a man who is not convinced of its truth.

But that is not exactly the point here. The question is, Has one the *Presbyterian* right to expel a member or minister who doubts the virgin birth? Mr.

Black is a Presbyterian minister, was ordained by authority of a presbytery and synod. Are they to be rebuked? Is Mr. Black to be unfrocked for this uncertainty of mind?

The answer depends on whether we hold the Presbyterian Church to represent, where it exists, the Church of the living God, or a superior, selective section in that Church, which chooses to add conditions which would shut out many Christians. That is a view which many take of their denominations. They purposely exclude many whom they know Christ would accept. That principle appears to us flagrantly arrogant, if not profane. But the rules of the Presbyterian Church do not require one to adopt it. No member is required to believe in the virgin birth; no elder and no minister. He is asked only to say that he receives the Confession of Faith of the Church "as containing the system of doctrine taught in the Holy Scriptures." That is generous and broad. The Presbyterian Confession of Faith, the old one or the new one, "contains" the teachings of the Holy Scriptures, and more, too. It tells us what authority to put on its own conclusions when it says:

"All synods or councils since the Apostles' times, whether general or particular, may err, and many have erred; therefore they are not to be made the rule of faith or practice, but to be used as a help in both."

That is very wise. This Westminster Confession of Faith was drawn up by such a particular council, and is "not to be made the rule of faith or practice," but is to be used under the enlightened wisdom of the Church. It is now an ancient and obsolescent document, and any one has the right to wrap it up reverently, and label it and pack it away in the ecclesiastical deposit vault, like the Thirty-nine Articles of the Anglican Church.

Yet there is a deeper principle involved than that of the documentary interpretation of this outworn Confession. In a Church, in an ecclesiastical court, has any man a right to set up a barrier between a Christian man and his Christ? We cannot believe it. Is he trying to live the life of Christ, and is he teaching others to live that same life? that is the question. If so, if he is casting out devils, then forbid him not. To forbid him is presumption, is arrogance, is blasphemy. The curse of God will be on any Church which refuses to allow new light to come from the Word of God, from the Holy Spirit, aiding all the honest investigations of earnest scholars. The accusers before the General Assembly attacked the higher criticism as the source of all this prevailing heresy. Then they attacked study, investigation, reason. They fear light, they would shut it out. Even within the Church it is best to let Truth and Error grapple. "Who ever knew Truth put to the worse in a free and open encounter? Her confuting is the best and sanest suppressing." Those who seek for wisdom as for hid treasures will find it; but it is stark blindness to be gazing everlastingly at the beacon light of Zwingli and Calvin. They are the troublers and dividers of Israel, who forbid the comprehensive unity of various views, and would shut us up to "the forced and outward union of cold and neutral, but inwardly divided minds."

Princeton's Opportunity

For a "quiet country college" Princeton is an exciting place. Life there is as full of dramatic surprises as the plots of a Triangle Club librettist. A few weeks ago the outside world felt itself called upon to condole with the university over the withdrawal of the half million that Mr. Procter offered for a graduate college. Today it is moved to congratulate the university on a bequest from the late Mr. Wyman of many times that amount for the same purpose. Then it looked as tho Dean West would never have a chance to carry out his long cherished plans for a residential graduate school of a unique type. Now he is one of the two trustees who have control of a fortune given to the university for that express purpose.

Whatever may be surmised about what sort of a graduate school Mr. Procter intended to promote by his gift, it seems clear that Mr. Wyman was inspired by Dean West's ideal and wished his money to go toward carrying it out. The will provides that the estate shall be devoted to

"the Graduate College or the proposed Graduate College . . . which the trustees of said university have devised and sanctioned and are now carrying into effect," in such ways *as the trustees of the estate* "may deem best and expedient."

The peculiar wording of this and other clauses of the will brings up again in an intensified form all of the questions which have been threshed out, or over, in the controversial literature of the past few months, the questions of how far Dean West's plan has been officially sanctioned by the university authorities, of how far the present Meyrick residence for graduates is to be regarded as carrying that plan into effect, and how far it is proper for a university to accept gifts "which takes the educational policy of the university out of the hands of the trustees and faculty and permit it to be determined by those who give money," to quote President Wilson's words.

But the discussion has been too much befogged by verbal quibbles and appeals to abstract principles on both sides, so it is greatly to be hoped that this bequest will be administered and received in a liberal spirit, tolerant of apparently conflicting ideals. To be sure, the Wyman gift cannot be withdrawn, like the Procter gift, because of offense at the questioning of its terms, but if ever the lawyers should be called upon to interpret the wording of the will there would not be enough left of the estate to quarrel about. As it is there is enough of it to provide, not only for the luxuries, but also for the necessities of a graduate college. In his idyllic picture of "The Proposed Graduate College of Princeton University," Dean West estimated the cost of the project at three million dollars, distributed as follows: I, Endowment for professorships, (fifteen professors at $5,000), $1,775,000; II, endowment for fellowships (forty fellows at $500), $500,000; III, buildings, $600,000; IV, reserve fund, $125,000. The Wyman estate will probably be sufficient to enable Dean West to carry out his plan even more lavishly than he dared to dream, and also to provide the things that other members of the faculty believe should come before ivied walls and carved oak paneling.

Dean West's ideal of a selected and secluded group of scholars, devoting themselves exclusively to non-utilitarian studies, does not seem to us as the best of all possible graduate colleges, but we do not see in it so much danger as some do. Gothic architecture does not *per se* interfere with investigation even in the most modern fields. Cambridge's leadership in radio-active research is proof of this. The location of the buildings is as unimportant as their style of architecture. The right kind of students will walk as far to their laboratories as they will to play golf, and the right kind of professors will draw them to Princeton even if they have to live together and dine in full academic dress every night in front of the High Table. These favored fellows may indeed become habituated to a too luxurious style of living, but they will have a chance to get over it when they get appointed to such positions as the Chair of French and Natural Science in the Masonic University of Smith Center, Va.

Dean West would limit the number of students in the graduate college to one hundred, which is less than a tenth the number Columbia now has. This might be desirable if as he assumes the Master and Council of the College were wise enough to select the fittest. But he is not at all clear on how they are to be selected and we doubt the competency of any men to determine which students will make the best use of such training in the course of their lives. Consequently we believe that the open-door policy of the State universities is likely to do the greatest good to the community.

But there is need in America for many different kinds of colleges, and at any rate such details are not to be decided in advance. They must be worked out gradually by the faculty as the institution develops. Hitherto the alumni have had too much and the faculty too little to say about how the university should be run. If the graduate school has any vitality in itself it will burst any restrictions that bind it too straightly. But that Dean West was wise in putting his aspirations into concrete form is shown by the outcome. A project for a graduate school, which, however, did not include the residential feature, was drawn up and

approved in 1896 during the administration of President Patton, but the committee in charge of it was not able to secure an endowment. But the handsome volume in which Dean West described and illustrated his ideal of a residential graduate college caught the fancy of the rich alumni and since 1903 the money has come rolling in. Princeton has now the opportunity to become a full grown university in every sense of the word. Soon we shall see, whether upon the golf links or elsewhere it matters little, a group of buildings that will rival those of the old campus; a Cleveland tower, a John R. Thomson dormitory, a Wyman quadrangle, and, let us hope, a Procter refectory.

A Thriftless Generation

One of the dominant traits of the American people before the Civil War was thrift. A majority of all families practised economy, and studied it as an art. Children were brought up to think about it. The sayings of Poor Richard were dinned into their ears. Thrift was not only everywhere in evidence, it was obtrusive and obtruded.

With thrift in money matters went a controlling sense of the value of time and of the importance of self-improvement. Idleness and loafing, even frivolous employments, were looked upon as serious vices which no respectable family could tolerate. Children were expected when not at work to read for information rather than for amusement. Books were relatively few; but the few were usually of a serious sort, and were read thru many times. Novel reading was not encouraged, and often was firmly discouraged. The theater was rather generally thought objectionable.

This serious view of life was itself the product of a hard struggle for existence. One of these days the economic interpretation of history will enable us to understand better than we have comprehended hitherto how the Puritan creed was shaped by the circumstances of the six days of toil, as well as by the seventh day of church going. Probably, in many instances, its precepts were pushed too far in practical application. Life was often more hard and barren than economic necessity or moral well-being demanded.

But reaction has gone too far. The American people of today are thriftless and extravagant in their economic affairs and, what is far worse, they are wasteful of time and energy. We have become amusement mad, and, as an entirely natural consequence, our amusements have to an increasing extent become senseless and vulgar. Our reading matter in larger and larger proportion has become a pandering to sensation. It appeals to appetites that get more and more jaded. The publishers hesitate to accept books of intellectual value. The theaters are afraid of plays that appeal to critical tastes and call for serious artistic effort. But vaudeville programs, "shows" and moving pictures multiply prodigiously and attract their tens of thousands. Multitudes of boys and men not only watch ball games day after day, but stand idly about the newspaper bulletins watching the "score." These are but examples, among hundreds, of the ways in which the people get rid of time that if devoted, even in some small part, to self-improvement would make us a nation of mental and moral power.

Combined with this waste of time and resources is a tendency that enormously impairs our effectiveness as a democratic community. "Education" is a national fad. Never has educational machinery been so elaborate, and never has the "plant" been worked at such a high pressure. Yet every teacher, from the primary to the university grades, complains of the amazing intellectual poverty of his pupils. They have no fund of general information. Their mental efforts have been concentrated upon prescribed tasks with examinations in view. They have not read widely and consecutively. Selections and fragments constitute their acquaintance with literature and science.

To a great extent this tendency may be accounted for by the intensity of the struggle to win a place in the world where income may be earned by some kind of "brain work." To become a salaried teacher or public employee, to get on the staff of a newspaper, to write for the magazines, or to obtain a foothold in a profession, is the ambition of most of the hundreds of thousands of young peo-

ple who are "getting an education." So they concentrate their efforts upon the studies that "count." They are not in school or college because they have a thirst for knowledge. It is safe to say that 75 per cent. of them are not even interested in knowledge except as a means to a practical end.

The net result of these two tendencies in combination, the tendency, namely, to seek only specialized knowledge, and the tendency to waste in idleness and upon inane amusements the time and strength that might be employed in self-improvement, is that astonishing superficiality of view and that ineffectiveness in public co-operation which are disclosed by all investigations of misdemeanor in business and political life. Astonishing ignorance of what human experience has over and over demonstrated, inability to distinguish between imposture and achievement—as in the case of Cook and Peary—readiness to believe in the "supernormal" powers of any vulgar pretender, faith in the most barefaced swindles offered by promoters, and inability to "get together" in public co-operation for the conservation of the people's resources, or for the carrying on of efficient and economical government, are some of the consequences we stupidly accept of our badly directed educational efforts and our disgraceful waste of time.

It is idle to expect that we shall radically improve our polity and our public policy until we once more take up seriously the art of training children and youth in mental, moral and economic thrift.

Relief for the Dumb Consumer

A bill has just been passed by the Canadian Parliament which is destined to be carefully studied thruout the world. It is entitled "An Act to Provide for the Investigation of Combines, Monopolies, Trusts and Mergers," and is the first practical recognition, as far as we know, of the fact that the consumer has some rights in the production and distribution of wealth. The bill was introduced as a Government measure by the Minister of Labor, Mr. Mackenzie King. The idea was suggested to him by the Industrial Arbitration Act, which has already proved such a success in settling Canadian labor disputes, and which President Eliot has characterized as one of the most important laws ever enacted in the New World. The present act provides, in brief, that any six or more British subjects who believe that a monopoly or combine exists to the detriment of the consumers can apply to a judge, who thereupon calls a hearing of the plaintiffs and defendants, and if it appears to him that an investigation ought to be held, he calls upon the Minister of Labor to draft a board of three members, one elected by the plaintiffs, one by the defendants, and the third by the two thus chosen, unless they fail to agree, when the Minister of Labor appoints him. This board has the usual powers of a court of law to summon witnesses, administer oaths, etc. After hearing the case, the board submits its report in writing, which is published in the official *Canada Gazette* and given to any other paper that wants it. Whenever the award shows that the trust or combine has been extorting monopoly prices or taking advantage of competing manufacturers or dealers at the expense of the consumer, the Governor in Council has the power to remove the tariff from the trust's goods or revoke its patents; and if the trust or monopoly continues to offend after a judgment against it, a fine of $1,000 a day is imposed. We commend this bill to the attention of the American people, and advise them to look more frequently than they have in the past to Canada, South Africa and Australasia, in order to learn the latest experiments in these thriving British colonies, which are now the most important political and sociological laboratories of the world.

President Taft's Indiscreet Defenders

Again and again the President has been obliged to correct the blunders of his friends. It was a most ill-advised attack which Mr. Tawney made on the Southern Congressmen who had voted against an increase in the appropriation for the President's traveling expenses. It was a charge of inhospitality and ingratitude and was properly resented. Then the President was obliged to express his deep pain at such a charge and to deny its justice and to declare that he could not regard any courtesies to him or from him as binding

any Representative to support him. Equally the President had to disavow the statements made for him by his own private secretary in the matter of the Lawler memorandum. He admitted fully and with frank detail what his secretary had denied, and it was not an agreeable thing to have to do. Then follows the resignation of the private secretary, for reasons of "health," and his appointment as Minister to Morocco. It would not be difficult to show that the President has found in his own Cabinet quite as unwise advisers. When he breaks away from them he is surer to be right.

Census Troubles

The difficulties of taking a census are innumerable. Any one who has seen the inside working of the basic recording might be excused for doubting the value of the final summation. Only the most intelligent farmers are able to more than approximate the facts about crops. When a farmer goes into bankruptcy, it is almost always owing to the fact that he has not known his financial standing. A mortgage trips him up on account of two bad years in wheat or corn, or in strawberries or small fruits. What answer can be given as to the number of improved acres, where three-fourths of the farm is in pine, which is more valuable than any tilled crop? How many farmers or others can tell the value of their own buildings? In the vegetable garden it is almost absurd to ask the number of acres given to sweet corn or beans or peas; or the quantity of each produced, altho enough has been gathered abundantly to feed the family. In the family enumeration, the first question demands a reply as to who is the head of the family. Does a man always know positively that he is the head of the establishment? One of the most difficult duties of life is to remember the ages and names of a good-sized family of children, where each one was born, and more of this family lore. One enumerator tells of a Pike family which reported twenty-two children; but neither the father or his spouse could give all their names or their ages. Another enumerator recounts a list of replies that were surely puzzling; one woman, "fifty years old, came to this country in 1842." However, a census we must have, and with all the figures before us we must guess as shrewdly as we can as to the facts. We shall get the average of wheat within a few thousand, and can have a good guess as to the exact population; minor detail must be taken *cum grano salis*.

College Character

The Higher Education Association, that was formed in 1909, under advice of the American Association for the Advancement of Science, has made its first report. It points out that until less than a hundred years ago—in fact till about 1848 or 1850, our colleges were conducted with special reference to a combined moral and mental growth. The laws of Yale as well as most of the other colleges bore upon moral conduct instead of class-room marking. Moral character was demanded everywhere, and steps were taken to secure it. At Yale every candidate signed this agreement, "On condition of being admitted as a student of Yale College, I promise on my faith and honor that I will avoid using profane language, and all indecent, disorderly behavior," and there was something more of the same nature. The modern catalog differs from the old catalog in being a treatise on marks and the marking system. Each student is allowed a certain number of cuts and flunks, but if he oversteps the number generously allowed him, he is in danger of expulsion. The committee complains in its report that the college of today, in arriving at diploma values, neglects entirely the community and home planes of education, and the fact that the young man is being trained for citizenship:

> "The American colleges have needlessly abandoned organic connection with the home and community, and concentrated their official notice upon classroom work."

The college might and should officially use a clean and stimulating home life, in the creation of high ideals in the college home, and afterward in the family. The institution has, however, allowed the pendulum to swing clear away from this to class-room work and grade examinations. We have recently heard one of the ablest and best of American educators assert directly that the college faculty has "no concern whatever with the behavior of the students or their character"; its purpose being purely scholastic. This might

be well enough, if it were not true that substitutes are surely found. Athletics, which now constitute a very large part of college work, and a very influential part in character making, are entirely cut from the curriculum. The Higher Education Association believes that, without affecting at all the scholarly efficiency of a college course, at least to its detriment, official value could be placed on personal worth, and less official notice taken of diploma values and marks. The purpose of the association will be to improve higher education thruout the United States; especially in the department of the student life—to do everything necessary to place our colleges on a basis that recognizes moral and civic purpose in education.

Principal Forsyth and Mr. Campbell

There is a disagreeable theological trouble brewing among the British Congregationalists. The Rev. R. J. Campbell is pastor of the City Temple in London and successor of Dr. Joseph Parker. He is one of the ablest London preachers and his people are devoted to him. But he has peculiar liberal views as to the philosophy of the atonement, and he has a special doctrine of divine immanence which gives vent at times to startling expressions. At the same time he is a devout preacher of Christian duty. But Principal Forsyth and Dr. Jowett and Dr. Campbell Morgan have criticised him as heretical, and Professor Forsyth has particularly devoted himself of late to emphasizing the points of difference against him. At last Mr. Campbell has got provoked, and he has written a letter to the secretary of the Congregational Union. He wants to know what it means that for some years, while at its meetings the Union constantly uses his church, it excludes him from its platform. Further, Principal Forsyth and Dr. Campbell Morgan had accused him of "making use of the name, the credit and the funds of the denomination while denying its faith," and reproached him for not withdrawing from it of his own accord. He now asks if the Congregational Union wishes him to withdraw from its membership. He asks the privilege before the Union, in his own pulpit, to ask that question, and he says that if either the committee or the assembly shall say frankly and definitely that his withdrawal is desired he will withdraw without demur, but not from his pastorate, where his people wish him to remain. This is a challenge, but the Union very properly declines to accept it. We have noticed for a long while that Principal Forsyth has been active in this attack.

The political views of the King are carefully guarded from publication, even when known; but the London *Church Times* has the temerity to make this statement about King Edward :

> "It is no secret that King Edward did his utmost to secure the passing of the Education Bill of 1906. He failed, and we are glad that he failed, but we do not the less respect his efforts. Failing, he showed no trace of soreness. He had the kingly quality of yielding gracefully—the quality which alone makes kingship possible."

This public statement greatly pleases the Nonconformists, in whose favor was the Education Bill, whose rejection by the Lords was the beginning of the serious attack on their prerogative. And now the *British Weekly*, the Nonconformist organ, encouraged by this avowal, tells us that it is well known that "the King did his very best to secure the passing of the budget by the House of Lords."

On the English precedent Senator Lorimer, of Illinois, would resign. A member of Parliament's seat is declared vacant because his brother spent more money for carriages to take voters to the polls than the law allows, altho the candidate himself was not aware of it. In Senator Lorimer's case it is proved by confession that members of the legislature were bribed to vote for him. It is to be presumed that he gave considerable of his own money to agents, and very likely his money went for the bribing, altho he was not informed at the time of the purchase of votes. He will have to be held responsible for the acts of his agents. We are assuming that one who confesses that he was bribed tells the truth.

Some beggar must have died on the night of the 18th. For Shakespeare says, "When beggars die there are no comets seen."

Insurance

New Medico-Actuarial Mortality Investigation

At a recent meeting of the Actuarial Society of America, held at the Hotel Astor, steps were taken to inaugurate a new system of judging whether or not a prospect is a good or bad risk. When the results of the New Medico-Actuarial Mortality Investigation are adopted, as they probably will be by all the big companies in the United States and Canada, people who seek policies will not all be judged alike. In the past this has been more or less the case. Under the new system a man seeking to obtain a policy will be judged according to his method of livelihood and its hazards, or the peculiarity of his family history, and the hazards of heredity, will be classified in a special way. It is proposed to create about 145 special classes, for each of which there will be a different premium. The healthy editor, for example, will pay a different premium from the healthy saloon keeper. The policy seeker who has had two deaths among his near ancestors from tuberculosis will have to pay a different premium from the policy seeker whose family tree contains a similar record with regard to cancer or Bright's disease. Statistics for these special risks have been in preparation during the past year by a committee of the chief actuaries of the leading life insurance companies. These investigations will be basic in the statistical investigations which the committee proposes to continue. Before its labors are finished every profession and every common medical history will have been studied and rated. The investigation to which reference is here made is the greatest step toward still further reducing life insurance to an exact science that has been taken in a generation. At the meeting of the Actuarial Society at the Hotel Astor, Arthur Hunter, the secretary of the joint committee, reported progress and gave an explanation of the extent of the investigation so far made. Questions raised by actuaries in regard to controversial points were answered by him. In this connection it is also intended to investigate the mortality among women; four groups having been selected, namely: One, spinsters; two, widows; three, married women with husband beneficiaries; four, married women with beneficiaries other than husbands. One of the most important results of the investigation, according to expectation, will be the department of a new standard table of hights and weights; a special point will be made of obtaining the mortality among those who are more than 25 per cent. over weight or more than 15 per cent. under weight. It is now expected that the desired data will be in hand by June, 1911. Those in immediate charge of this investigation are: Dr. H. Willard, Dr. O. H. Rogers, Dr. B. Symones, Dr. E. W. Dwight, John K. Gore, of the Prudential; A. A. Welch, of the Phœnix Mutual; E. E. Rhodes, of the Mutual Benefit, and Arthur Hunter, of the New York Life, secretary.

The Hartford Fire Insurance Company, of Hartford, Conn.

When an insurance company celebrates the 100th anniversary of its birth it shows conservative management and makes it most fitting to extend congratulations. We therefore congratulate the Hartford Fire Insurance Company of Hartford, Conn., whose original charter was granted at the May session of the General Assembly of Connecticut in 1810. The company began doing business in August of the same year, and is consequently now 100 years old. The first president was Nathaniel Terry and Walter Mitchell was its first secretary. The company's charter authorized a capital of $150,000; in 1853 the company was authorized to increase its capital to

a sum not exceeding $300,000. By later amendments the authorized capital was increased to $3,000,000, and in 1906 the paid up capital was increased to $2,000,000. Since the Chicago fire of 1871, at which time the losses of the Hartford reached approximately $2,000,000, the Hartford Fire Insurance Company has ranked as the oldest stock insurance company in the State of Connecticut. The first policy issued by the company covered a builder's risk of $4,000 for three months at 12½ cents. Nathaniel is interesting to note that not a single loss occurred during the first year of the company's life, and for the next three they amounted all told to only $421.84. From April, 1820, to November, 1823, the total losses were $66.25. Altho one or two agents had been appointed at other places several years earlier, it may be stated that the first agent of the Hartford in New York was appointed in 1821, and his name was Anson G. Phelps, afterward well known as a philanthropist, and as the head of the

BUILDING OCCUPIED BY THE HARTFORD FIRE INSURANCE COMPANY, HARTFORD, CONN.

Terry was succeeded as president by Eliphalet Terry, who served until 1849; Hezekiah Huntington was then elected and held the office until 1864, when T. C. Allyn became the president and continued in that position until 1867, when he was succeeded by George L. Chase, the father of Charles E. Chase, who now occupies the office. During the years of his presidency the late George L. Chase worked early and late, and the reputation of the Hartford Fire in the United States is largely due to his efforts. It house of Phelps, Dodge & Co. The Ansonia, one of the largest hotels in New York City, is named after Mr. Phelps, and is owned by his grandson. In the company's statement as of January 1, 1910, the total assets were shown to be $23,035,700, with a net surplus of $6,713,748. The present board of officers includes Charles E. Chase, president; Richard M. Bissell, vice-president and underwriting manager; J. W. G. Cofran, vice-president, and Thomas Turnbull, secretary.

FINANCIAL

The Loan to China

At last the controversy about the projected railway loan to China is ended, and an agreement admitting bankers of the United States has been signed. The loan as originally planned was to be $27,500,000, and the money was to be supplied by syndicates of English, German and French bankers. Our Government asked that American bankers should be allowed to participate. China was willing, but the European syndicates, probably with the support of their Governments, objected. The loan carried with it the construction of the projected roads and supplies of material. Owing to the continued pressure of our Government, the American bankers (understood to be J. P. Morgan & Co., Kuhn, Loeb & Co., the National City Bank and the First National Bank) are to have one-fourth of a loan of $30,000,000, together with a share in the construction and in the furnishing of material. Our Government has been criticised for using the force of national diplomacy in support of the claims of bankers. But this is not merely a financial transaction. The purely financial profits will not be large. The trade of this country with China, and the influence of the United States in China, are involved. Altho there is local opposition there to the use of any foreign capital, the Chinese Government welcomes American participation in the railway project, knowing that the United States has no territorial claims or designs to promote. It is fortunate that the syndicate of American bankers is one whose power and resources are exceptionally great. No other group could be found that would so clearly represent both at home and abroad the extent and force of American capital.

Rising Wages

The president of the telegraphers' union said last week that the increase of wages recently granted to railway telegraphers amounted to $1,000,000 a year. This part of the upward movement of wages has been overlooked by many. By the end of June substantially all of the increases for the year will have been made, and the amount per annum can then be estimated. The total will surprise those who have not followed carefully the current reports of wage changes. Probably the average addition will be about 6 per cent. Changes reported last week are mentioned below:

International Paper Company, 25 mills, 5,700 men, increase of 5 per cent., 8 hours, no Sunday work; St. Louis Terminal Company, 6,000 men, voluntary increase of 5 per cent.; Washburn-Crosby Flour Company, 2,000 men, voluntary addition of 8 per cent.; Kansas miners, 3,500, 5½ per cent.; Illinois miners, 4,000, about 5½ per cent.; brick companies, Fishkill, N. Y., 1,400 men, by strike, about 5 per cent.

In many instances the gains of employees are not fully measured by the increase of pay. Hours have been reduced. The Steel Corporation, employing 220,000 men, has undertaken to eliminate Sunday work so far as possible. A committee was appointed by the Iron and Steel Institute last week to work for a six-day week thruout the iron and steel industry. The tendency of such commendable reforms and of the increase of wages is to add something to the cost of production and the price of products.

....Chicago offered bonds at 4½ per cent. last week, but all the bids were below par, and no award was made.

....The rate of interest realized last year on Harvard University's investments ($22,716,759) was 4⅕ per cent.

....Since the beginning of last year the Attorney-General of New York has collected $40,000,000 of overdue special franchise taxes. The amount not yet collected is $6,000,000.

....The United States Radiator Company is a new combination of several manufacturing companies. R. J. Gross, of Dunkirk, N. Y., is president. The capital is $4,000,000 common stock and $4,000,000 preferred.

....A long and searching inquiry has been made by the Department of Justice concerning conditions in the lumber trade, to ascertain whether they call for proceedings under the Anti-Trust law. The results have not been made known.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JUNE 9, 1910 No. 3210

Survey of the World

Mr. Taft on the Education of Women

The President, on the 2d, attended the commencement exercises at Bryn Mawr College, where his daughter, Helen, is a student. The subject of his address to the graduating class was the higher education of women. Actual experiment had shown, he said, that the claim that there was any difference in favor of men in quickness of learning or in the thoroness of acquisition of knowledge was entirely unfounded:

"I dissent from the view that an academic education unfits man or woman for business. It may be that the tastes that lead one to an academic education are not those which insure business success; but that the mental discipline, the power of reasoning, the cultivation and comparison of ideas, are not of assistance in business transactions in which the highest qualities of the mind are acutely in action, can hardly be true. But it is said that women are not all going into the professions, and so that the education necessary as a basis for a professional career is not needed by those women who have a competency, or who look forward to marriage and motherhood as the chief end of woman. It is even suggested that the higher education of women rather unfits them to discharge the duties of a wife and mother; that in some way or other it robs them of a charm and gives them an intellectual independence that is inconsistent with their being the best wives and mothers. I utterly dissent from this view. The companionship of married life is the chief charm and reason for its being, so far as it relates to the two persons concerned. The enjoyment of the home, with children, and the training of them are, of course, among the most important duties and pleasures of married life; and it certainly does not detract from the power of a woman to make a good companion, or to teach and train her children up to high ideals, that she should have the advantage of the higher education. It is not essential that a woman who knows much must conform to the unattractive manner and ways of the conventional blue-stocking; that she should make the extent of her knowledge a source of discomfort to those with whom she associates, or that she should lose her interest in the sentiment and emotions of life, or fail to have an appreciation of beauty and romance."

He was ready to concede that marriage and motherhood were a normal status for woman, but this was far from saying that a woman's life was a failure if she had not married, or that it might not be a failure if she had married. One of the great advantages of the higher education for a woman was that it gave her independence in choosing the kind of life she was to lead. We could not estimate the enormous advantage enjoyed by the present generation, and to be enjoyed by generations to come, on account of the increasing sound and thoro education of mothers of families. Nor could we estimate the increased happiness experienced by men and women who, as husbands and wives, have enjoyed the higher sense of companionship which is made possible by the intellectual sympathy and association of ideas between two thoroly educated persons. The higher education of women should be sought wholly without regard to either a professional or a matrimonial future.

On Muckrakers and Socialism

In an address on the following day to the graduating class of Ohio Northern University at Ada, after considering the opportunities offered by the several professions and occupations, the President exprest his disapproval of muckraking in journalism. Certainly journalism was a profession, he said, in which men of discriminating intelligence, high courage and accurate judgment, lovers of truth and real patriotism, could find a sphere of usefulness unexcelled elsewhere, and such men were needed;

for, if the standards set by some of the most successful newspapers in lack of truth, in coarseness and in unfairness of criticism should not improve in the next generation, it would vindicate the pessimists of today:

"I refer to a class of newspapers and of magazines that are properly criticised as 'muckrakers,' that rely for their circulation on the vicious and unfounded attacks upon the honesty and upright character and patriotic motives of men in public life, and upon those conspicuous and prominent generally. This muckraking is an outgrowth, and probably the unavoidable aftermath, of a laudable and necessary attack upon abuses which had shown themselves in a form of corporate greed and control of politics. It was necessary to have a housecleaning in this regard, and Mr. Roosevelt led the movement and much has been accomplished in clarifying business and political methods. In the doing of it, he was himself the foremost to denounce those who took advantage of the general condition of popular suspicion and filled their purses by unfounded attacks upon men in public office, struggling conscientiously to do their duty. But this muckraking episode will pass. Indeed, I hope it is passing, and for the best of reasons, because the people are beginning to see what it really is, are refusing to be influenced by it, and thus are not making the contributions to the pockets of the muckrakers which is their only motive for conducting their business."

Speaking at a banquet of the Board of Commerce, in Detroit, the President took conservation for his subject. We should have to offer a fair profit, he said, to private capital if development was to come. In Alaska "they are paying $10 and $12 a ton for coal, with an abundance to be mined right at their doors." In dealing with national wealth we should not entirely shut out the present generation.——In Monroe, Mich., he made a brief address at the unveiling of a statue of General Custer.——At Ada he had spoken of the importance of preserving our institution of private property, which had done more than any other of our institutions, that of personal liberty excepted, to promote modern progress and civilization. At Jackson, on the 4th, attending the unveiling of a tablet commemorating the organization of the Republican party, he reviewed that party's work and then returned to this subject, with its relation to Socialism:

"The issue that is being framed, as it seems to me, is the issue with respect to the institution of private property. There are those who charge to that institution the corporate abuses, the greed and the corruption that grew out of these abuses, the unequal distribution of property, the poverty of some and the undue wealth of others, and therefore say, 'We will have none of it, and we must have a new rule of distribution, that, for want of a better name, we shall call Socialism.' On the other hand, it is contended that it is not the institution of private property that should be abolished, but only that the time has come in which it is necessary to lay down certain rules restricting and regulating the use of that private property which shall not deprive the world of individual effort, but which shall still keep the law and the opportunity to use private property under such control that the boon of individual effort will still be left to us. Now, my friends, that presents a great and difficult problem that I am quite willing to admit we have not yet solved, and the question which the country will have to determine after all is which party it is that heretofore has shown sufficient skill and effectiveness in dealing with great issues, which party can be trusted to solve that problem, than which we have had no greater in the history of the country."

Bribery and Fraud

Sentences were pronounced last week in two of the Pittsburg bribery cases. E. H. Jennings, president of the Columbia National Bank, the Colonial Trust Company and the Manufacturers' Heat and Light Company, whose private fortune is said to be $20,000,000, was sent to jail for two months and required to pay a fine of $500. Frank A. Griffin, formerly cashier of the Columbia Bank, must remain in jail four months and pay $500. Both had given evidence to assist the prosecution.——The investigation concerning bribery at the election of United States Senator Lorimer, of Illinois, has led to discoveries relating to corruption that affected legislation. It is said that a bill requiring fish dealers to pay license fees was killed by a contribution of $3,500 to the "jackpot" fund of which the confessing members have spoken. Henry Lemm, a wealthy fish dealer, testifies that his contribution was $300, and that he has paid something at every session for twenty years. Governor Deneen says it is manifest that a very extensive organization of corrupt members would have been required to carry out such a conspiracy against the public interests as has been revealed by the confessions already made. He urges all good citizens to assist the authorities engaged in the inquiry. State Senator Holstslaw, a wealthy man who controls

four banks, and who admits that he sold his vote for $2,500, says he confessed because he "would rather be known as a boodler than as a liar." All he wants now is "to sink out of sight." His children say he could not have been in his right mind.——In Schenectady, N. Y., at an extraordinary term of the Supreme Court, convened by Governor Hughes, fifty indictments, against twenty-seven persons, have been found, and sixteen of those accused have been arrested. It is alleged that they defrauded the county by false bills and in other ways. The list of those arrested is as follows:

Dr. C. N. Van Denberge, formerly superintendent of construction and repairs; George A. Pepper, formerly superintendent of roads and bridges; Irving S. Vedder, merchant and commissioner of deeds; Ex-Supervisors J. G. Hilderbrandt, William Dunleavy, Aaron Huffmire, Thomas W. Wynne, Isaac L. Whitmyre, William W. Davis, John W. Hudson, Edward H. Robinson, Anson H. Cary, and Myron W. Jacobson; John H. Peters, clerk of the board; Frederick Rolfe, clerk for coal merchants; Philip Mulderick, plumber.

The offenses named are larceny, forgery, perjury and misdemeanors. It is alleged that the county was systematically defrauded in payments for labor and supplies. One of those indicted is said to be a fugitive in South America.

The Railroad Bill

In the Senate, on the 3d, the railroad bill was passed by a vote of 50 to 12. All of those in the negative were Democrats. All of the Republicans, insurgents included, were counted for the bill, and with them six Democrats, Senators Chamberlain, of Oregon; Clay, of Georgia; Gore, of Oklahoma; Paynter, of Kentucky; Simmons, of North Carolina; and Stone, of Missouri. As passed, the bill differs widely from the measure prepared by the Administration. Among the original provisions which were rejected were those which permitted traffic agreements under the supervision of the Commission, authorized mergers by purchase under certain conditions, and empowered the Commission to regulate issues of bonds and stocks. The most important parts of the bill which the Senate sends to conference are those which create a Court of Commerce; place telegraph and telephone lines under the jurisdiction of the Commission; empower the Commission on its own initiative to inquire concerning the reasonableness of rates and to prescribe a proper rate; authorize the Commission to suspend a new rate for ten months pending an investigation and a hearing; amend the long and short haul section of the present law so as to permit a greater charge for a short haul than for a long one only with the Commission's consent; give shippers the right to designate a thru route for their goods, and authorize the Commission to establish thru routes and joint classifications.

Sugar Trust Cases

Reports from Washington say that the Government has decided to prosecute the Sugar Trust (the American Sugar Refining Company) under the Sherman Anti-Trust law, and to ask for a dissolution of the combination. It is said that for nearly six months the Department of Justice has been procuring evidence for such a suit, and that it will not wait for the Supreme Court's decision in the Standard Oil and Tobacco Trust cases.——At the trial of Sugar Trust employees in New York, last week, two of the defendants, Secretary Heike and Cashier Gerbracht, testified in their own behalf, asserting their innocence. They had had no knowledge, they said, of the fraudulent weighing. Gerbracht admitted that wages had been paid to the employees convicted some months ago, up to the time of their conviction. He had believed they were innocent, he said. After conviction he thought they were guilty, but he continued to pay the wages because their families needed the money. The testimony, with remarks by counsel, tended to show a purpose to place responsibility for all that had been done upon President H. O. Havemeyer and Directors Donner and Matthiesen, all of whom are dead.

Nicaragua's Revolutionists

The forces of President Madriz, which had been attacking the defenses of Bluefields, were routed on the 1st, but the revolutionists were unable to regain possession of the Bluff on the coast. In his assaults upon the revolutionists'

trenches, Lara, the Government's commander, lost about 300 men, and 300 more were captured. Mines had been laid in front of the revolutionists' trenches by William P. Pittman, a young American from Boston, and many of the Madriz soldiers were killed by the explosion of them. Pittman was captured, and it was said that he would be tried by court-martial. Our Government, having in mind the fate of Groce and Cannon, sent word that his treatment must be humane and in accord with the rules of civilized warfare. After the retreat of Lara, Estrada sent reinforcements to Rama, where the revolutionists were defending themselves against General Chavarria. On the 3d Chavarria's army was routed, and he was captured. Some time ago the revolutionists failed when they approached the west coast, and now the Government has been whipped on the east coast. During the attack upon Bluefields, when the Madriz steamship "Venus" prepared to throw shells over the city to the trenches, the "Paducah" cleared for action and notice was given that the United States gunboat would sink the "Venus" if she should begin to use her guns. Madriz sought to collect duties at the Bluff from merchant vessels. Whereupon our Government decided that Estrada was entitled to collect duties at his new custom house, and the commander of the "Paducah" was instructed to enforce this decision. Two days later, the commander of the "Venus" published a decree warning incoming ships that he would insist upon collecting duties. But the decision will be enforced. Our Government says it does not now intend to establish a protectorate, or to intervene, or to recognize either party, until one of them shall have gained control of all Nicaragua. It is said that the "Venus" was bought with money contributed, under pressure, by ex-President Zelaya, who has much property in Nicaragua. Pittman, who was captured, is twenty-seven years old and a nephew of the late Judge Robert Pittman, of the Massachusetts Superior Court. For four years he was employed on the Panama Canal. On the 5th, President Madriz assured our Government that no court-martial for Pittman had been thought of, and that the prisoner would be treated fairly. He also asserted that neither Lara nor Chavarria had been defeated. They had retired, he said, in obedience to orders and "for military reasons."

The Islands

Some changes are to be made by the House Committee on Insular Affairs, at Washington, in the pending bill concerning Porto Rico. Instead of granting United States citizenship only to those who apply to a court for it, the bill will declare that all citizens of the island are citizens of the United States. The delegation from Porto Rico asked for this. At present the island's Senate (or Executive Council) is composed of thirteen members, all appointed by the President. The people would like to have all of them elected. In the amended bill the election of five will be authorized until four years hence, when the number of members so chosen will be increased to six, with provision for the election of seven after the lapse of eight years more.——Dispatches from Madrid say that if the wreck of the "Maine" is raised the Spanish Government will ask for a joint inquiry as to the cause of the destruction of the battleship, desiring to submit evidence in support of its theory that the explosion was of internal origin. In 1898, Spain demanded such an inquiry, but our Government preferred to make an investigation without aid from abroad.

Ecuador and Peru

When there were indications that Ecuador, in accepting mediation, had imposed conditions which Peru was inclined to reject, the three Powers which had undertaken to mediate sent word recommending that June 4 should be the day for the withdrawal of troops from the frontier. Peru promptly began, on the 3d, to move her troops, and it became known a few hours later that orders for withdrawal had been given by Ecuador. Our Government, announcing the acceptance of the proposed date by both Ecuador and Peru, said it was very gratifying to know that Chile had exprest a desire to co-operate with the United States in securing peace. At an extraordinary session of Ecuador's

Congress, on the 4th, President Alfaro said the offer of the three Powers had been most cordially accepted, and he congratulated them. The King of Spain will withhold his decision in the boundary dispute, and it is said that no decision will ever be made by him. If this be true, the three Powers—the United States, Brazil and Argentina—will devise a plan for a settlement of the controversy.

Growth of Western Canada

The immigration into Western Canada continues to be enormous. During the last fiscal year 96,000 persons came over from the United States, and it is estimated that the number this year will reach 125,000. Mr. William Whyte, second vice president of the Canadian Pacific Railway, reports that the class of immigrants this year both from the United States and the mother country is the best ever received. He believes that in five years' time Saskatchewan will be producing more wheat than Texas, and that in fifteen years this single Canadian Province will be growing more wheat than the whole of the United States. To the south the corn belt is steadily encroaching upon the wheat belt, which, as a result, is being forced further north. He is convinced that in a few years the United States must import wheat from Canada if the big mills of Minneapolis are to be kept running. According to the Bureau of Immigration at Washington, in the period from March 31, 1909, to March 1, 1910, the sum of $95,371,000 was taken into Canada by the 95,371 Americans who crossed the border. It is further estimated that between March 31, 1897, and March 1, 1909, 425,460 persons left the United States permanently to live in Canada, and that they carried at least $425,461,000. Of the 95,371 persons who left the United States last year for the Canadian West, 57,576 were American born and 37,795 aliens who had contemplated permanent residence in the United States. The movement into Canada has been chiefly from the Middle West. During last year North Dakota lost 3,464 heads of families, Minnesota 1,741, South Dakota 522, Michigan 514, Washington 510, Wisconsin 477, Iowa 430, Illinois 296, and Montana 184. Last year Saskatchewan grew 90,255,000 bushels of wheat, 105,465,000 bushels of oats, 7,833,000 bushels of barley, and 4,448,700 bushels of flax. The total area in grain crops was 6,898,559 acres, and the average acreage of grain crops per farm was 84.9 acres. Saskatchewan now holds the third place among the Provinces of the Dominion and States of the Union as a producer of wheat and oats. The only States which show a greater wheat production are Minnesota, with 94,000,000 bushels, and North Dakota, with 90,700,000 bushels. Minnesota's average yield per acre was 16.8, North Dakota's 13.7, that of Kansas 14.1, and that of Saskatchewan 22.1. Illinois and Iowa were the only American States to produce more oats than Saskatchewan in 1909. These States yielded 159,000,000 bushels and 116,000,000 bushels respectively, as against 105,465,000 in the Canadian Province.

Roosevelt's Lecture to England

Mr. Roosevelt has been hitherto so careful in his Continental addresses to avoid offending the sensibility of his hearers by discussing their national politics that it startled Englishmen to hear from him, on the occasion of his receiving the freedom of London, a discussion of the duty of England to Egypt. The address so positively approved strong measures in repressing disorder that it greatly pleased the Conservatives, but called forth sharp criticism from some of the radical journals. After opening remarks about the admirable way in which government was administered in the Sudan and two other of the African dependencies, Uganda and East Africa, which he had visited, he turned to the conditions in Egypt, and said, among other things:

"Yet recent events, especially with what happened in connection with and following the assassination of Boutros Pasha [the Egyptian Premier who was killed by a Nationalist], have shown that in certain vital points you have erred and it is for you to make good your error. It has been an error proceeding from an effort to do too much, and not too little, in the interests of the Egyptians themselves.

"But unfortunately it is necessary for all of us who have to do with uncivilized peoples, especially fanatical peoples, to remember that in such a situation as yours in Egypt weakness, timidity and sentimentality may cause even more far reaching harm than violence and injustice. Of all the broken reeds senti-

mentality is the most broken reed on which righteousness can lean. . . .

"The attitude of the so-called Egyptian Nationalist party in connection with this murder has shown that they are neither desirous nor capable of guaranteeing even primary justice, the failure to supply which makes self-government not merely an empty but a noxious farce. . . .

"It was with the primary object of establishing order that you went into Egypt twenty-eight years ago. . . . Now, either you have a right to be in Egypt or you have not. Either it is or it is not your duty to establish and keep order.

"If you feel that you have the right to be in Egypt, if you do not wish to establish and keep order there, then by all means get out of Egypt. If, as I hope, you feel that your duty to civilized mankind and your fealty to your own great traditions alike bid you to stay, then make the fact and the name agree and show that you are ready to meet the responsibility which is yours.

"It is the thing, not the form, which is vital. If the present forms of government in Egypt established by you in the hope that they would help the Egyptians upward merely serve to provoke and permit disorder, then it is for you to alter the forms, for if you stay in Egypt it is your first duty to keep order—above all, to punish murder and bring to justice all who incite others to commit murder or condone crime when it is committed.

"When a people treat assassination as the cornerstone of government they forfeit all right to be treated as worthy of self-government. . . .

"Some nation must govern Egypt. I hope and believe that you will decide that it is your duty to be that nation."

While the English papers differ in their comments on Mr. Roosevelt's address on the Egyptian situation, two Americans abroad have issued very strong attacks on the ex-President for his utterances. Mr. William R. Hearst telegraphed from Paris to the London *Daily Mail:*

"Every true American abroad ardently wishes that Mr. Roosevelt would cease claiming to represent American ideas in foreign countries and that he would go home and attend to his own business. Self-respecting Americans are tired of seeing this self-advertising individual parading Europe claiming to represent a democratic nation while seeking to ingratiate himself in undemocratic ways with the representatives of monarchies and empires. Americans who love their country and believe in republican institutions are shocked and outraged to hear this supposed representative of republicanism preaching the oppression of subject States. . . .

"Since when has it been necessary to urge England to govern with a rod of iron and sword of blood? India, Ireland, Egypt and South Africa are broken with the former and wet with the latter. . . . Why should Mr. Roosevelt deny the accepted American idea that a just government is based upon the consent of the governed? If Mr. Roosevelt is right Washington and Jefferson were wrong and Patrick Henry's patriotic words ought to be torn from children's readers and Mr. Roosevelt's truckling twaddle substituted.

"The United States is being misrepresented abroad by a tin soldier, a toy Colonel, who, although unwilling to submit to discipline for the few days he served in the army, has been forever since trying to inflict military methods and arbitrary rule on his own people and others."

In an address before a Y. M. C. A. association at Bradford, England, Mr. W. J. Bryan referred to Mr. Roosevelt without mentioning him and said that when he was himself traveling in a foreign country he did not discuss that country's politics, because as an outsider he did not regard himself as sufficiently informed to enable him to do so with intelligence. Moreover, he said, as a guest of a foreign people he would account it a poor repayment for their hospitality to descant on controversial subjects which his entertainers understood better than himself. Mr. Roosevelt has been bitterly attacked by G. Bernard Shaw, while the Irish contingent, under Mr. Redmond, has courteously entertained him.

British Affairs

The British Parliament resumes its session on Wednesday of this week, and up to this date the country is kept in ignorance of the intentions of the Government as to the resumption of the campaign against the House of Lords. A very great attempt has been made, particularly on the Conservative side, to impress the people with the wisdom of putting off the crisis until next year, or, if possible, of coming to some compromise. It is said that neither side wants the expense of another Parliamentary election at present, and that neither is confident of success. Just now a great deal of ill feeling has been started by the assertion, previously whispered, but now plainly uttered in a journal of no prominence called *The Bystander,* that Mr. Asquith's violent policy was, according to the doctors, one of the causes of the late King's death. The accusers declare that it was the bringing the Crown into the discussion that worried the King to death, and they are immensely indignant at such cruel profanation, while the Liberal journals are equally indignant that the royal family

should be outraged by such infamous falsehoods. The impression seems to be that there will be no election in July, and none before January next. But it is believed that an election cannot be further delayed, as the veto of the Lords will force an appeal when the bill reducing the power of the second chamber is presented to them.——Once more an aviator has crossed the Channel between Calais and Dover. The Hon. Charles Stewart Roll, well known as automobilist and aviator, started from near Dover for France with an aeroplane of the Wright pattern, with a rear plane invented by himself. He soared to a hight of 1,000 feet and, under clear weather and perfect conditions reached the French coast at high speed, quite outstripping the two tugs that were supposed to follow him. Over the village of Sangette, near Calais, where M. Bleriot started for the first successful flight across the Channel, he descended to a level of 800 feet and dropped a message of greeting. Without alighting he returned to Dover, in a thick air, which required him to guide his course by the sun; and he reached his starting point ninety minutes after he had begun the trip, with petrol to spare and with the engine in excellent condition.

Northern Europe Items

Emperor William, of Germany, has asked an increase of $800,000 for his civil list, which already amounts to $3,250,000, out of which he pays the incomes of his married sons, the salaries of court officers and the expenses of the royal castles. Action on a previous request of his was deferred owing to the excitement which grew out of the famous interview with the late Lord Tweedmouth. It is likely that the various parties will agree to grant this request in view of the greater expense of living. It costs a good deal to keep up so many palaces. The Emperor's sore hand caused some anxiety from fear of poisoning, but he is now able to use it for writing.——The arbitration tribunal of The Hague opened its session June 1 to hear the argument on the Newfoundland fisheries question between the United States and Great Britain. Professor Lammasch, president of the tribunal, in his opening address, said:

"By submitting this century old conflict to an arbitration court America and Great Britain have demonstrated their complete confidence in this peaceful method of settling conflicts. They have given an example to all nations and won fresh credit in the cause of international justice and peace, for which they perhaps have done more than other nations, especially during the reign of the great monarch whose premature and sudden death was so recently lamented by his vast empire and under the presidency of the illustrious statesman who inaugurated procedure by the arbitration tribunal."

The members of the court are Prof. Lammasch, Messrs. Gray and Fitzpatrick, Dr. de Drago, of Argentina, and Dr. Lohman, of the Netherlands.

——The results of the Belgian elections have not quite pleased either of the two great parties. In the previous Chamber of Representatives the Catholics had a majority of 8, and the "Cartel," composed of Liberals and Socialists, had hoped to gain in this election at least 4 seats, and thus wipe out the majority. In fact, they gained but 1 seat, reducing the Catholic majority to 6, the Catholics having 86 members against 44 Liberals, 35 Socialists, and 1 Christian Democrat. Each party gained in the total vote, the Catholics gaining 14,000 votes, the Liberals 6,000 and the Socialists 7,000.——Dr. Kuyper, the former Conservative head of the Netherlands Government, has been sharply attacked in the Chamber of Deputies on a charge of having secured from a merchant large sums of money for the expenses of his party, with the promise of giving him a decoration. It was not finally given before Dr. Kuyper's fall from power, but the merchant's name was placed in reserve as one who was recommended for the honor. This charge had already been bruited abroad, and Dr. Kuyper seemed unwilling to have a "jury of honor" appointed, as his friends desired, to investigate the case; but when an investigation was threatened in the Chamber of Deputies, he consented to the jury. Still, the jury delayed action, apparently on Dr. Kuyper's desire, and a Socialist deputy brought the matter to a vote, but as the party of Dr. Kuyper is in the majority, the bill for investigation was defeated by a vote of 40 to 31. Dr. Kuyper a few years ago visited this country and was honored as a distinguished churchman and statesman.

The New Secretary to the President

BY WILLARD FRENCH

The office of Secretary to the President has become one of grave importance to the country. Cortelyou and Loeb lifted it out of the estate where the Secretary sat at the President's elbow as stenographer, messenger and general catch-all. They made the Secretary the President's *alter ego*, one upon whom he must often rely for quick judgment, with an inherent instinct for saying and doing the right thing on short notice, and with an unlimited capacity for bearing, successfully, a large portion of the burdens, constantly increasing, which otherwise would overwhelm the President. The Secretary to the President, today, is the safety vault for all secrets of the Administration which must not escape, the mouthpiece for all information given to the public, and responsible for all shades of intention emanating from the White House. The office requires the delicacy of the diplomat, the strategy of the statesman, the facility of the politician, the courage, keenness, and common sense of all successful men, and the patience of Job, besides herculean ability for work.

It is no small compliment today for a man to be appointed Secretary to the President, and with such men as Cortelyou and Loeb to follow it is no small triumph if he succeeds. Charles Dyer Norton, who has received promotion to the vacancy from his position as First Assistant Secretary of the Treasury, has made good in a most remarkable way in his rapid climb up the ladder of Fame, and those who know him best are most enthusiastic in indorsing the selection of the President, notwithstanding the fact that his life thus far has not been along lines of national politics or in fields which would particularly fit him for the new duties he assumes. Overwhelming commendations emanated from the Lake City when Secretary of the Treasury MacVeagh brought Norton from Chicago to be his first assistant. Everything indicated that a man of unusual qualities held the important post. For a little more than a year he has been the ranking Assistant Secretary of the Treasury, in charge of the fiscal bureaus. He did valuable work in collecting data for the postal savings bank bill and directed the reorganization of the methods of handling work in the subtreasuries. At the Treasury Department they say of him that he has "a steam-engine capacity for disposing of business." When he began in the Treasury he told me that he should make his watchword "efficiency and economy," and in that he has certainly succeeded—the estimates for appropriations for the next fiscal year are approximately $2,000,000 less than for the previous year.

Mr. Norton was born in Wisconsin in 1871. He was only sixteen when he entered the employ of the Northwestern Mutual Life Insurance Company, but four years later he went to Amherst College and graduated in 1893. For a year or more he was on the staff of *Scribner's Magazine*, but ill health forced him to abandon the work and take a year abroad. Returning he went to Chicago, where he again became connected with the Northwestern Insurance Company as general manager for Illinois, the position which he resigned to come to Washington as Assistant Secretary of the Treasury.

His unusual executive and administrative ability in building up the business of the insurance company was but a small part of his success in Chicago. As president of the Merchants' Club, he was the chief inspiration and vital energy of the important reforms inaugurated by that organization; and when the club was consolidated with the Commercial Club he became chairman of the committee which worked out the plans for the beautification of the city and suburbs which are the pride of Chicago today. He was the soul of several other important measures of practical reform and Chicago finds words of praise for him wholly inadequate.

Mr. Norton is only thirty-nine, which gives him a good running start. He is tall, slender, active, full of energy, democratically cordial, quick, clean, well poised, self-reliant. His face is smooth-shaven, with an appearance younger than his years. He has a fine forehead, topped with thick brown hair. In good looks he runs a close second to Bacon, whom he rather resembles, but, like the late Apollo of the State Department now Ambassador to Paris, he evidently considers personality subservient to business qualities. He gave up a $50,000-a-year position for $4,500 in the Treasury, and he does not much increase his salary as Secretary to the President, but the indications are that he brought his full fifty-thousand-dollar ability with him and an old fashioned patriotism.

Mr. Norton is the son of a frontier Congregational missionary. His wife was Miss Katherine McKim Garrison, of New York. They have three children, and hosts of friends wishing him success in the new field, for which he is exceptionally fitted in everything but experience.

WASHINGTON, D. C.

Theodore Roosevelt

BY ELMER J. BURKETT, LL.B.

United States Senator from Nebraska.

WHEN I was at Montreal last summer I saw some young men with tripod and transit and chain and notebook performing the always strange but familiar antics that go with surveying. Inasmuch as the particular place where they were seemed to me to have passed the frontier stage, my curiosity was aroused, and upon inquiry I learned that they were university students surveying the campus as a practice "stunt." The old driver who was showing us about did not seem to understand it at all, and in a manner that almost savored of superstition, imparted to us the information that men had been measuring and remeasuring that same hill for over twenty years, and for some reason or other they never seemed to be satisfied with the results.

The people of the entire world are out now with their measuring apparatus trying to get the real size of Theodore Roosevelt. In fact, like the boys of Montreal University, they have been measuring him and remeasuring him for the last dozen or fifteen years, and like those boys again nobody is just exactly satisfied with anybody's else's measurements and not entirely certain of his own. Mr. Roosevelt has defenders and defamers; those who swear by him, and those who swear at him, but all agree that he is the most remarkable man in the world today. "The most startling figure in the world since Napoleon Bonaparte," is the way one writer gives the result of his survey. Others have had to go back to Julius Cæsar for a prototype. "More nearly like Jackson than any man in American history," is a very common way of expressing it, and, to say the least, a very conservative measure of his greatness as the measuring is going on in these times.

That Theodore Roosevelt is a most extraordinary man is conceded alike by friend and foe, but just how great as the world estimates greatness is, of course, not universally agreed upon. This is not surprising, because the measurement of men intellectually and morally, is not an exact science. Greatness of character and mental worth cannot be measured by metes and bounds, for it is an operation of judgment in which figures and inches and bushels are not employed in the calculation; and judgment, like discretion, varies with the one who is exercising it. No two men by the sight alone will agree exactly on color or on the hight of a balloon, or on the distance of a ship at sea. The judgment of any single individual is affected by the relative position he occupies to the thing to be judged, the angle of his vision or his proximity. Men are generally underestimated at close range and are perhaps likely to be overestimated at long range. The man who has felt the whack of the "big stick" will naturally view Roosevelt at a different angle from one who nurses no such unpleasant recollection. Members of the "Ananias Club" will have some difficulty in distinguishing heroism from "bluff."

Nevertheless, with all proper allowance for personal pride and political pique, everybody must agree that Theodore Roosevelt is stronger in the minds and hearts of the people today than any living man, and, in fact, stronger than he ever was before. Criticize his methods or his doctrines as they may, he has obtained results, and results are what count with the people. The people are seldom exacting as to methods and not always as to motives, but they do like results. They may never have inquired intricately and specifically into the real offenses of the malefactors of great wealth, nor into the motives of those persons who would stay their filching hand, but it was enough for the people to know that the verdict was against those outlaws to society, and that Theodore Roosevelt proposed to enforce the verdict. The people only knew that there had been high financing of the instrumentalities of their commerce at their expense; they knew that there had been rottenness in Wall Street; that there had been violation of plighted faith and juggling with the people's laws, and it was enough to know that Roosevelt was out with all his strength in the people's interest.

So, whether men like him or other-

wise, they must admit and do admit that he is a great man in the estimation and affections of the people, and that is the crucial test of a man. The whole world has got by its doubts upon that question, for, impossible as it may seem now, there was a time when there were doubts. The time was when the people themselves were inquiring whether he was a great man or a mere pretender, an opportunist or a propagandist. The question is now settled beyond cavil at least that if he was an opportunist, he created his own opportunities and grasped them with all the zeal and success of one who had his principles thoroly at heart and his plans well laid.

The question now uppermost is, what is the secret of his power and his influence among men? If he is a great man, why is he great? What are his particular attributes? What is it that attracts to him the attention of the entire world? Why is he so extravagantly glorified everywhere? Royalty and nobility do him honor, while the soft, sweet strains of Europe's national airs and the weird tomtoms of Africa sound the same genuineness of his popular welcome. Surely no other man has ever been so acclaimed in so many different tongues, under so many different skies and in so many different ways. What is there in him that distinguishes him from all other men? These are the questions that all men are asking everywhere. Why is it that he can be lost to the public eye neither in political retirement nor in the nomadic seclusion of an African wilderness? Why is it that in spite of political mistakes,—for he has made them, and notwithstanding diplomatic tangles, he is still the lion of the hour to all nations and to all the people thereof? Or, to be more colloquial, why can he wear a silk hat and be "our Teddy," and in spite of an aristocratic birth and aristocratic environments remain the idol of the common people?

We saw him nominated for Vice-President as the political expedient of a corrupt machine for the idealistic purpose of practical elimination, and then we saw him, an exile, break the machine, destroy the manipulators and replace them with men and methods of his own creation. We saw him come to the White House under very trying circumstances, and handicapped by an unfortunate popular opinion of him, charitably exprest perhaps in the words of Lowell in his fable for critics, "Three-fifths genius and two-fifths sheer fudge." Nevertheless, we saw him retire from that exalted position at the end of seven years rehabilitated in the judgment of men and so enshrined in the hearts and confidence of the people that he could dictate his own successor. We saw him enter a self-imposed banishment to the most inaccessible and impenetrable spot on the globe, only to return to civilization with greater applause than ever before. He left with the American people as escort, and returns with the whole world at his chariot wheels.

What is it all about, the people are asking. What qualities does he possess that others do not have? What are the magic words that open all hearts to him, and what the magic spell that draws all men unto him? It is a psychological question with which psychologists are helpless, and a political attribute by which the most astute politician is amazed. It is more than a fleeting fancy of the hour, for it has sustained him in the confidence and esteem of the people in official position and out of it. It does not answer the question to call it a mere appeal to the prejudice and the passions of men, for others have tried that without success. Nor will it answer to say that he is radical and that radicalism appeals to the American people, for there have been others more radical than he. It is not sufficient to say that he has been honest and able, for there have been other honest and able men during his public career. It takes more than an able and honest man to win public confidence as he has done it. These qualities are necessary, but he who would win it must also be energetic and courageous, fearless, and determined, and above all in complete sympathy with human rights and human welfare, and alive to present day conditions. In the great struggle of life, he must be prepared to take the side of the man rather than of the dollar. Old time methods in politics, old time ideals of governmental duty and prerogative are relegated to the junkshops of political antiquities, and the man who has become irrevocably imbued with

them is eliminated as a possible competitor for popular esteem. No man who apologizes in his soul for the economic and industrial legislation of the last decade in this country is acceptable to the American people as a political leader. No man who is skeptical in his own mind of the righteousness of the advanced ground that the American people have taken socially and morally can hold their confidence. No man who is fearful of popular rule or is more afraid of the people's oppression of predatory wealth with law than of its oppression of the people without law, is eligible to popular esteem.

Roosevelt has been measured by every one of these tests; he has fought the battles of the people against the combined hosts of greed and avarice. He has done it fearlessly and courageously and by it has endeared himself to all mankind. This is why he is popular in the minds of the people. It counts for naught that he has made mistakes, for they are of judgment, while his motives are of the heart. Critics will look in vain for any unusual ability or faculty that he possesses beyond the one faculty of serving the people and making them to understand and believe that he is serving them. There is no alchemy for winning and holding men unto him of which he alone holds the secret. It is old as the world itself, a soul fired with human sympathy, a heart that beats in unison with the people in their trials and struggles, and a courage that goes to their relief. It is not a pandering to the passions and prejudices of the extremist, for the people have not wanted for their idol an extremist who jumps without looking and denounces without investigation, and condemns without rhyme or reason. Mr. Roosevelt's success has perhaps been very largely due to his conservatism in handling questions that make most men radicals, or perhaps better in dealing with questions and to an extent that only radicals usually approach, and all the while maintaining an attitude of fairness and honesty and conservatism. He never advocated a law that would do any more injury to legitimate business than the law against bank robbery would interfere with legitimate banking. That is why he has the confidence and the esteem of the strong minded and successful but honest business men of the country. The people have asked only for a man wise enough to know, courageous enough to do, and practical enough to accomplish. Roosevelt measured up to this test. Like Lincoln, he was denounced by some because he went too far, and criticised by others because he did not go far enough, but between these two extremes, between the rotten manipulator who wants no regulation and the fanatical agitator who would stop everything, Theodore Roosevelt has steered a middle course, and the great mass of the people have followed him in the past and are following him still.

WASHINGTON, D. C.

Memorial

BY JESSIE RICHMOND DENNEY

WRAPPED in the flag he loved
My father lies
Deep in an unmarked grave
'Neath southern skies:
Robbed of his love and care
My lone heart cries:—
"'Twas for my flag!"

When o'er his grave the grass
Had not yet grown,
Low on her bed she sank
Without a moan:
Their spirits met, and I
Was left alone
'Neath my strong flag.

All that a life may lose,
It is to me;
All that a life may gain,
In it I see:
Tear-dimmed I gaze,
While there exultantly
Sways my loved flag.

GRAND RAPIDS, MICH.

The Chang-sha Riots of 1910

BY WILLIAM J. HAIL

[Mr. Hail is a member of the Yale Mis ion in Chang-sha and the following article was written on shipboard where the missionaries sought refuge after the destruction of their buildings by the mob. Since this outbreak is apparently a manifestation of a widespread anti-foreign movement, this narrative by an eye witness is of historic interest.—EDITOR.]

THE city of Chang-sha has always been one of the most conservative of the most conservative provinces in the Chinese Empire. It was with great difficulty that foreigners were admitted, and ever since the port was opened to foreign trade the local authorities have been unwilling to carry out the provisions of the treaty by which it was open. There has been a constant struggle between the officials and the foreign consuls as to whether the city or only the part that lies outside the walls along the Siang River was the treaty port. The consuls have maintained that the foreign merchants were allowed to buy land and open up offices inside the walls, while the officials have contended that the port was only the river front, and no firms have been able to secure land in the city itself.

Besides this natural conservativeness of the people and officials, the general currents of progress have made themselves felt among the younger element, and the death of the Empress Dowager and the Emperor hastened the feeling that in the new order of things they were able to take full charge of all local affairs, and this has produced a feverish radicalism which is held along with the conservatism that has always prevailed. The provincial assemblies organized last winter proved to be both radical and conservative-radical so far as the introduction of self-government is concerned, and conservative in regard to all foreign and outside enterprises. Among the things that they forbade was the opening of the city to foreign trade, treaty provisions notwithstanding. Another matter that engrossed their attention was that of the proposed trunk line from Hankow to Canton, in which matter there was sympathy and co-operation with the fight of the Hupeh people against a foreign loan. There is a well-known and indomitable pride about the people that includes a profound contempt for the foreigner. The foreigner may be from another country or from another province. The feeling against him is nearly the same.

The influential people of the city are the members of some of the highest families in the empire, and they are Hunanese to the core. In their individual relations with the foreigners they are courteous, but there is always the same manifestation of pride and conservatism in all their dealings with foreign affairs, and they have, thru the Provincial Parliament, been a source of embarrassment to the officials as well as to the foreigners.

It is for this reason always uncertain in cases of trouble what the effect of that trouble will be on the foreigners who live in their midst. So it was in this instance. There was a threatened rice famine due to the unrestricted exportation of rice from the province. When the matter became acute by reason of the advancing price of the rice and there were rumors that the price was bound to advance still more, with the prospect that none at all could be had after a fortnight, we had apprehensions for our safety in case the situation should become acute. On the morning of the 11th of April, word came that the people were becoming uneasy and alarmed at the situation, and that they were bitter in their feelings toward the Governor of the province because he had not taken any measures to restrict the exportation of rice.

On the same afternoon there was a most unfortunate occurrence outside the city, where a number of the officials had gathered to consider the situation. In this section of the city a great many poor people live, many of them refugees from other parts of the province, where the floods of last summer had left them destitute. Among them were some people

who were hungry and they set up the cry for food. The same day and about the same time the police magistrate spoke to some of the people and is reported to have told them that the price of rice was lower here than in some other places in China, and that there was to be no disorder of any kind, for in that event the people would be punished.

These two things led to the organization of a mob to go to the official residence of the Governor and express their feelings toward him for the mismanagement of their affairs. From what evidence we are able to collect these people started to the yamen about half-past seven in the evening and remained there until after midnight, being kept out of the place by soldiers, who were furnished with bamboo sticks and bayonets, but, so far as I am able to learn, with little or no ammunition. They appear to have confined their rioting to that one place till the time mentioned above, when either they went elsewhere or else different mobs were organized, for about one o'clock there were attacks made on the Wesleyan Mission in the western part of the city and on the two missions near the South Gate. In each of these cases it seems rather clear that no anti-foreign outbreak was meditated, because they were battering at the gates of the post office and of the Imperial Bank just before going to the Wesleyan Mission. The watchmen of the city had gone out a little before this time, proclaiming that there was a riot and commanding the people of all the places on the streets to open their doors and hang out lights, and it seems that in none of these cases was there a prompt compliance.

The foreigners of the three missions above mentioned fled thru back doors and either hid themselves in the city or on the city walls, or managed to have the West Gate opened and escaped to the steamer that was lying at anchor just off the shore. Other missionaries hid themselves in the residences of friends, slipping out thru their back doors lest they be seen by the rioters. Some remained, but were prepared to flee on a moment's notice, and it was amusing to see the figures that emerged from the hands of those who fitted them out with Chinese garments. About four o'clock word was brought in that there was a truce, perhaps due to the coming of the troops from outside the city. We breathed freely and the ladies made preparations for flight by the steamer which

CHANG-SHA WATERFRONT.

Customs House slightly to left of center with high flag pole. Steamship company's warehouse and hulk to right of center all burned on April 18. American Missionary and his wife in small boat escaping to steamer in foreground.

was to leave for Hankow. After breakfast these removed to the steamer, and all the women of nearly all the missions had gathered on the steamer before ten o'clock.

About half-past ten in the morning there was heard a sound of firing in the direction of the Governor's yamen. In a little while the streets were filled with the excited populace. Those foreigners who were still in the city were advised to leave at once because the excitement and crowds were increasing, and certain danger threatened any who should remain in the city. The soldiers had, it was said, begun to fire on the crowd, and that was sure to stir up the people to desperation. Some of them left the city at once and others with a little more deliberation remained till later in the day, hoping that there might be a chance of staying. By five in the afternoon all were reported safe on the steamers, with three or four exceptions. These came that night or the next day.

During the afternoon the poor little river boat was a scene of confusion. The cabin and deck of the first saloon, fitted out for eight or at the most twelve people, were occupied by a throng of men, women and children of various nationalities, perhaps seventy-five in all, together with such of their belongings as they had had time to secure when they ran. None of the foreigners dared to return to the city, but their faithful servants and friends went in and brought out parcel after parcel while they could. The natives also were coming out from the shore in crowds to escape from the fate that might be in store for them as natives of other places or as representatives or followers of foreigners. In the late afternoon it was deemed necessary to move down the river to a point 2 or 3 miles below the city, in order to keep out of danger on the one hand, and to prevent so many people from taking refuge on the steamers.

But there was enough excitement to make these matters pale into insignificance. Toward noon a smoke was seen to the northwest and the word rapidly spread that the mob had at last succeeded in setting fire to the Governor's *yamen*, an action that I understand never occurred before. It was about an hour after this when rumors reached us that the mob had returned to the missions and that they were about to set fire to the Norwegian mission, a rumor that soon proved correct. There was some grief on the faces of those who had worked in the city with patience and sacrifice, for several years building a chapel, only to see it and their houses going up in flames and destroyed in an hour. Before long a similar rumor concerning the China Inland Mission proved equally true. A carnival of firing houses was threatened,

BURNING OF CHINA ISLAND MISSION.

but there were only one or two more actually fired during the afternoon, for a stiff breeze sprung up, and various places which were to be fired were saved by the action of the neighbors, who prostrated themselves before the rioters and begged that innocent people should not be injured or their property endangered. In some cases they were successful.

But in the evening the work of destruction was resumed. The foreign refugees had been divided into two parties, the most of the women and children going to the second steamer due to sail the following day, and the rest remaining near the city to await the coming of gunboats. To insure against trouble the steamers were moved a little lower down, and from there enough could be seen to infer that there was a great deal of disorder in the city and suburbs. Nearest the steamer in the north suburb the Catholic Mission blazed, and beyond, indistinct in the mists of evening, were clearly to be distinguished other fires that seemed to be new. Late at night word was brought that some of the schools had been set on fire. During the night the refugees on the steamer kept regular watches and some of them discovered a burning junk floating down the river. It burned with a fierce blaze, which looked as if the boat had been covered with kerosene. It is suspected that this was an attempt to set some of the steamers on fire.

The following morning the launch that had been put at the service of the British Consul took some of the men up to the city to see what had happened during the night. The first place that we reached and passed was the warehouse of the Standard Oil Company. There we beheld a scene of animation. Men were coming out of the door like bees out of a hive, each one carrying a case or a tin of oil. Some of these people were carrying their plunder to the small houses of the vicinity, but the most of them appeared to be loading the boats that floated at the water's edge.

Nearer the West Gate we saw that the custom house and the jetties of the two British steamer companies had been burned, while the warehouses had been broken into and looted. Strangely enough, the Japanese jetty and the warehouses were untouched. On approaching the custom house, as tho about to go ashore, we saw a crowd of people standing about and viewing the work of the incendiaries. Some of them were inside the building looting. When word was given that we were approaching, they issued from the building and began to scatter at full speed. When the launch stopped they gathered at a respectful distance; but when the launch began to move across the river they gathered at the edge of the bank and started to cry out: "Foreign devils! Kill them!"

In the afternoon all the men attached to the Imperial Maritime Customs went up to the same place with the intention of staying there to defend the property that yet remained uninjured. But in the late afternoon the Consul decided that he must take the precaution of moving the steamers down the river and sent to tell these men that they must return and not imperil their lives by remaining where they were. About five o'clock the two steamers of the British companies and a Japanese steamer moved down the stream to a point 12 miles from the city, where the passengers were, the next day, again divided into two portions, one of which went down the river to Hankow, while the other waited for the gunboats which were expected. The Japanese community with their consul went down to Hankow on the same steamer.

From the morning of the 16th till the afternoon of the 17th those who remained behind were engaged in watching for news from the city and for gunboats from Hankow. Whenever a steam vessel of any kind appeared it was stopped and inquiries were made, but no important information could be gathered. The previous afternoon the Japanese shops were looted; but from this time the authorities first began to take control and several men were beheaded for looting, with the result that the trouble ceased, and the reflecting and the timid began to count the cost. A terror began to seize upon the people as to what might happen when the foreign gunboats came. While we remained at anchor we could see groups of people hastening in chairs and afoot along the highway, escaping from the city. Rumors reached us from various sources that in many of

the country villages there were instances of poor people breaking into the shops to take the rice that was in stock. In the city the Governor had handed over his seals of office to the Provincial Treasurer, who had promptly issued a proclamation fixing the price of rice at a reasonable figure, and at the same time opening some of the Government granaries to the people. Late on the evening of the 16th the foreign community of Siangtan, ordered by the British Consul to leave, came down, but continued the flight early the next day.

On Sunday morning, the 18th, there came a launch from the Viceroy announcing that there were a thousand soldiers coming up from his capital, Wuchang. He informed us that the British gunboat that had started to Chang-sha was aground in the Tungting Lake. It was a long morning. Then, about a quarter past two in the afternoon, we discerned a smoke at a distance down the river, which those who had glasses told us proceeded from a gunboat that was rather large and fitted out with two masts, evidently one of the larger boats in the upper Yangtsze River service. When she approached with her fighting tops and her decks all cleared for action we all gathered on the deck of our steamer and watched her with great pride. It was the emblem of a responsible and powerful government in the midst of vacillation and irresponsibility, and the feelings of those who had escaped from the terror of the unprotected city, and their emotions, can only be felt and shared by those who have passed thru the uncertainties of danger to secure the protection of a strong and certain refuge. Our cheers arose from British, American, German, Russian, Italian, Swiss, Norwegian and Swedish throats; for the flag that flew at the masthead was the flag of our champion, and we made the Chinese hills resound with our cheers as H. M. S. "Thistle" passed us and anchored.

While the officers of the gunboat were holding a consultation with the consul another smoke appeared in the distance. Again the glasses made out the form of an approaching gunboat; but the men who knew the various war vessels in the rivers said that none of the foreign ships looked like the large black cruiser that was approaching. They made it out to be a Chinese gunboat coming to represent the Viceroy of Wuchang. The gunboat "Thistle" saw her, too, and decided to push on to the city. They well knew that the Chinese boat was the more speedy, but they determined that the British ship should not come in behind her if they could prevent it. While the newcomer was still a mile or so below the "Thistle" hauled in her anchor and got under way a half mile in front of her rival. We also weighed anchor, but with each passing moment we were falling behind. The Chinese cruiser tried to catch up with the "Thistle," and passed our steamer with the coal smoke pouring in thick black columns from her two funnels. She was filled with soldiers, five hundred or more, packed together on her decks like sardines. On each side of her bows were field guns. But the British captain gave orders to the engineer not to let the ship fall behind. Those engines, perhaps, never suffered such a strain before. It was whispered among us that she exceeded her trial speed. We followed in the rear and watched them racing each other. At first it seemed to us that the Chinese cruiser was bound to pass her rival, but when they went around the bend in the river we saw that the British were ahead. They reached their destination ten minutes before the Chinese.

Our feelings as we followed the gunboat up were far different to those we had when we went down two days before. The flag that had been nailed to the mast of the Consulate was lying limp when we left, but was flying in the strong breeze on our return. One of the men on deck called our attention to it and suggested that it was an index of our own feelings on the two occasions. We thought that our troubles were now at an end; that there was nothing more to do but to await the coming of the Governor on the morrow, receive his assurances of safety, and then go ashore. We had already passed resolutions of thanks to the Consul and the ships, and had raised a subscription for the servants of the vessel we were on. There were discussions as to the manner in which the settlement would be made.

We had assurances from the people of the city that all was peaceful and that it could never happen again. With light hearts we went to rest that night. But the next day no Governor came to see the Consul. He was busy consulting with the local gentry about ways and means of getting a supply of rice for the people lest there be a renewal of the same trouble in the future. This, together with the fact that there were disquieting rumors of difficulties in the country districts, that there were troops actually marching out across the country to neighboring towns, that at the moment the officials were punishing the rioters and incendiaries by decapitation and had failed to find all the ringleaders, many of whom are still at large and willing to risk for a second time their already doomed lives in an attempt to embarrass the officials by killing foreigners on the streets of the city, the Consul posted a notification forbidding all British and Norwegian subjects from entering the city till further notice and requesting that the people of other nations observe the same care, lest by running into danger themselves they endanger people in other places thruout the province, where the residents are almost ripe for some form of trouble.

From the decks of the steamer nothing that would indicate danger was to be seen. But there lay the ruins of the destroyed buildings and jetties on the foreshore. It was a sad thing to contemplate. What was even more sad was the thought that these things might have been prevented altogether had the authorities taken proper measures of precaution as soon as the trouble commenced. From the testimony of trustworthy witnesses it seems clear that the most of the destruction and looting could easily have been stopped had any of the officials been willing to take the responsibility into his hands. But there were the remains of costly buildings and valuable merchandise for the loss of which no insurance company will be responsible, but which will be repaid from the poverty of some of the very persons who have been crying for bread, who followed the rioters solely for that reason, and who in their ignorance were stirred up against the foreigners; or, in other instances, from the shops and small merchants, whose small profits will be swallowed up in this settlement.

BURNING OF GOVERNOR'S YAMEN.

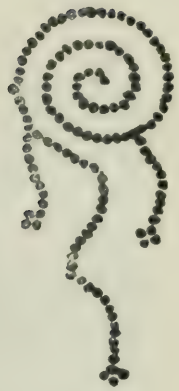
On the morning of the 19th the Governor's flag appeared on the shore. It is a blue flag with a golden dragon. Many of those who have been for years in the country had never before seen it. The Governor was soon to come off from the shore to interview the Consul. But for hours he delayed. It was noon before his boat put out from the shore. We could see him board the gunboat and not one of us but would have given a great deal to be present to witness the meeting between him and the Consul. It was something after half-past twelve before the interview ended, and we inferred from the eleven guns that were fired in

salute that it had been satisfactory. This surmise soon proved correct, the Consul himself coming over to the steamer with the news that all foreigners were permitted to enter and reside in the city; that the officials would furnish the most complete possible protection; and that for those whose houses had been destroyed they would undertake to rent other quarters.

We went ashore in the afternoon and some of us were led by curiosity to go to some of the places where property had been destroyed. But on the streets all was quiet. The people were all at their ordinary occupations. Nothing seemed to remain as a testimony of their two days' fury except charred wood and fallen bricks and stones.

When we returned to the steamer we found that disquieting rumors were once more afloat. The masons of the city had been especially active during the riots and they had been the chief instigators of the destruction of houses. The greater portion of the houses destroyed were built by masons from other places, for which the local guild had borne a grudge. They are suffering the most from the decapitations that are going on at present. Because of this the streets were placarded yesterday with notices stating that the Imperial Government had seen fit to retain the former Governor, who was hateful to the Hunan people; and that in view of that fact they should continue their attempt to assassinate him and should smite the foreigner. The Consul immediately sent word to the officials and learned from them privately that they had no real power to guarantee protection. It was necessary for them to give the assurances they gave in the morning, but those were idle words on their part. Our shore leave was recalled and we were warned on no account to enter the city again. The men on the steamer who were willing to act as volunteers were shown how to handle the rifles that had been brought from the consulate, watches were set, and the foreign people who were in the city were summoned. The "Thistle" had moved a few miles down the river, but returned in the morning, preceded by a Chinese launch that had been converted into an auxiliary cruiser carrying two Maxim guns and a number of bluejackets from the "Thistle."

It is too soon to predict what will be the result. Is it safe to think of entering the city soon, or should we remain on houseboats, or escape to some other place? Will the masons succeed in stirring up the people to desperate actions which may lead even to revolution? Will the supplies of rice suffice for the demands of the people? Will the presence of the troops from Hupeh disaffect the populace of this proud Hunan and goad them to fury? Will the present deadlock and hesitation, whereby the Peking Government refuses to change the Governor and the people refuse to recognize him end in compromise or in rebellion? These are the greater questions that we are trying to answer and we cannot now find any clew to the answer.



CHANG-SHA, CHINA.

Traveler and Peasant

BY COUNT LEO TOLSTOY

[The interior of a peasant hut. An old traveler is sitting on a bench, reading a book. A peasant, the master of the hut, just home from his work, sits down to supper and asks the traveler to share it. The traveler declines. The peasant eats, and when he has finished, rises, says grace, and sits down beside the old man.]

PEASANT—What brings you . . .

TRAVELER (taking off his spectacles and putting down his book)—There is no train till tomorrow. The station is crowded, so I asked your wife to let me stay the night with you, and she allowed it.

PEASANT—That's all right; you can stay.

TRAVELER—Thank you! . . . Well, and how are you getting on nowadays?

PEASANT—What's our life like? . . . As bad as can be!

TRAVELER—How's that?

PEASANT—Why, because we've nothing to live on! Our life is so hard that if we wanted a worse one we couldn't get it. . . . You see, there are nine of us in the family; all want to eat, and I have only got in four bushels of corn. Try and live on that! Whether one likes it or not, one has to go and work for wages . . . and when you look for a job, wages are down! . . . The rich do what they like with us. The people increase, but the land doesn't, and taxes keep piling up! There's rent, and the district tax, and the land tax, and the tax for bridges, and insurance, and police, and for the corn store . . . too many to count! And there are the priests and the landlords. . . . They all ride on our backs, except those who are too lazy!

TRAVELER—I thought the peasants were doing well nowadays.

PEASANT—So well that we go hungry for days at a time!

TRAVELER—The reason I thought so was that they have taken to squandering so much money.

PEASANT—Squandering what money? How strange you talk! . . . Here are people starving to death, and you talk of squandering money!

TRAVELER—But how is it? The papers say that 700 million rubles (and a million is a thousand thousands) — 700 millions were spent by the peasants on vódka last year.

PEASANT—Are we the only ones that drink? Just look at the priests. . . . Don't they swill first rate? And the gentlefolk aren't behindhand!

TRAVELER—Still, that's only a small part. The greater part still falls to the peasants.

PEASANT—What of that? Are we not to drink at all?

TRAVELER—No; what I mean is, that if 700 millions were squandered on vódka in one year, it shows that life can't be so very hard . . . 700 millions! It's no joke . . . one can hardly imagine it!

PEASANT—But how can one do without it? We didn't start the custom, and it's not for us to stop it. . . . There are the Church feasts, and weddings, and memorial feasts, and bargains to be wetted with a drink. . . . Whether one likes it or not, one can't get on without it. It's the custom!

TRAVELER—But there are people who never drink, and yet they manage to live! After all, there's not much good in it.

PEASANT—No good at all! Only evil!

TRAVELER—Then one ought not to drink.

PEASANT—Well, anyhow, drink or no drink, we've nothing to live on! We've not enough land. If we had land, we could at least live . . . but there's none to be had.

TRAVELER—No land to be had? Why, isn't there plenty of land? Wherever one looks one sees land!

PEASANT—There's land, right enough, but it's not ours. Your elbow's not far from your mouth, but just you try to bite it!

TRAVELER—Not yours! Whose is it, then?

PEASANT—Whose? . . . Whose, indeed! There's that fat-bellied devil lives

over there . . . he's seized 5,000 acres. He has no family, but he's never satisfied, while we've had to give up keeping fowls—there's nowhere for them to run about! It's nearly time for us to stop keeping cattle, too . . . we've no fodder for them; and if a calf, or maybe a horse, happens to stray into his field, we have to pay fines and give him our last penny.

TRAVELER—What does he want all that land for?

PEASANT—What he wants the land for? Why, of course, he sows, and reaps, and sells, and puts the money in the bank.

TRAVELER—How can he plow a stretch like that, and get his harvest in?

PEASANT—You talk as if you were a kiddie! . . . What's he got money for, if not to hire laborers? . . . It's they that do the plowing and reaping.

TRAVELER—These laborers are some of you peasants, I expect?

PEASANT—Some are from these parts and some from elsewhere.

TRAVELER—Anyway, they are peasants?

PEASANT—Of course they are! . . . the same as ourselves. Who but a peasant ever works? Of course they are peasants.

TRAVELER—And if the peasants did not go and work for him . . .

PEASANT—Go or stay, he wouldn't let us have it. If the land were to lie idle he'd not part with it! Like the dog in the manger, that doesn't eat the hay himself and won't let others eat it!

TRAVELER—But how can he keep his land? I suppose it stretches over some three or four miles. How can he watch it all?

PEASANT—How queer you talk! He himself lies on his back, and fattens his paunch; but he keeps watchmen!

TRAVELER—And those watchmen, I daresay, are also peasants?

PEASANT—What else could they be? Of course they are!

TRAVELER—So that the peasants work the rich man's land for him, and guard it for him from themselves?

PEASANT—But how can one help it?

TRAVELER—Simply by not going to work for him, and not being his watchmen! Then the land would be free. The land is God's, and the people are God's; let him who needs it plow and sow and gather in the harvest!

PEASANT—That is to say, you think we ought to strike? To meet that, my friend, they have the soldiers. They'd send their soldiers . . . one, two, fire! . . . some would get shot, and others taken up. Soldiers give short shrift!

TRAVELER—But is it not also the likes of you that are soldiers? Why should they shoot at their fellows?

PEASANT—How can they help it? That's what the oath is for.

TRAVELER—The oath? What oath?

PEASANT—Aren't you a Russian? . . . The oath is—well, it's the oath!

TRAVELER — It means swearing, doesn't it?

PEASANT—Well, of course! They swear by the Cross and by the Gospels, to lay down their life for their country.

TRAVELER—Well, I think that should not be done.

PEASANT—What should not be done?

TRAVELER—Taking the oath.

PEASANT—Not done? Why the law demands it!

TRAVELER—No, it is not in the Law. In the Law of Christ, it is plainly forbidden. He said: "Swear not at all."

PEASANT—Come now! What about the priests?

TRAVELER (takes a book, looks for the place, and reads)—"It was said to them of old time, Thou shalt not forswear thyself, *but I say unto you, Swear not at all* . . . But let your speech be, Yea, yea; Nay, nay: and whatsoever is more than these is of the evil one." (Matt. v, 33, 38.) So, according to Christ's law, you must not swear.

PEASANT—If there were no oath, there would be no soldiers.

TRAVELER—Well, and what good are the soldiers?

PEASANT—What good? . . . But supposing other Tsars were to come and attack our Tsar . . . what then?

TRAVELER—If the Tsars quarrel, let them fight it out themselves.

PEASANT—Come! How could that be possible?

TRAVELER—It's very simple. He that believes in God, whatever you may tell him, will never kill a man.

PEASANT—Then why did the priest

read out in church that war was declared, and the Reserves were to be ready?

TRAVELER—I know nothing about that; but I know that in the Commandments, in the Sixth, it says quite plainly: "Thou shalt do no murder." You see, it is forbidden for a man to kill a man.

PEASANT—That means, at home! At the wars, how could you help it? They're enemies!

TRAVELER—According to Christ's Gospel, there is no such thing as an enemy. You are told to love everybody. (Opens the Bible and looks for place.)

PEASANT—Well, read it!

TRAVELER—"Ye have heard that it was said to them of old time, Thou shalt not kill; and whosoever shall kill shall be in danger of the judgment . . . Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy: but I say unto you, Love your enemies, and pray for them that persecute you." (Matt. v, 21, 43, 44.)

(A long pause.)

PEASANT — Well, but what about taxes? Ought we to refuse to pay them too?

TRAVELER—That's as you think best. If your own children are hungry, naturally you should first feed them.

PEASANT—So you think soldiers are not wanted at all?

TRAVELER—What good do they do? Millions and millions are collected from you and your folk for them—It's no joke to clothe and feed such a host! There are nearly a million of these idlers, and they're only useful to keep the land from you; and it is you on whom they will fire.

(The Peasant sighs, and shakes his head.)

PEASANT—That's true enough! If everybody were to do it at once . . . but if one or two make a stand, they'll be shot or sent to Siberia, and that will be the end of the matter.

TRAVELER—And yet there are men, even now—young fellows—who by themselves stand up for the Law of God, and refuse to serve. They say: "According to Christ's Law, I dare not be a murderer! Do as you please, but I won't

PEASANT—Well, and what happens?

TRAVELER—They are put in prison; they remain there, poor fellows, three years, or four . . . But I've heard that it's not so bad for them, for the Authorities themselves respect them. And some are even let out as unfit for service—bad health! Though he is sometimes, a strapping, broad-shouldered fellow, he's "not fit," because they're afraid of taking a man of that kind, for fear he should tell others that soldiering is against God's Law. So they let him go.

PEASANT—Really?

TRAVELER—Yes, sometimes it happens that they are let off; but it also happens that they die there. Still, soldiers die too, and even get maimed in service—lose a leg, or an arm . . .

PEASANT—Oh, you're a smart fellow! It would be a good thing, only it won't come out like that.

TAVELER—Why not?

PEASANT—*That's* why.

TRAVELER—What's *that?*

PEASANT—That the Authorities have power given them.

TRAVELER—They only have power, because you obey them. Do not obey the Authorities, and they won't have any power!

PEASANT (shakes his head)—You do talk queer! How can one do without the Authorities? It is quite impossible to do without some Authority.

TRAVELER—Of course, it is! Only whom will you take for Authority—the policeman, or God? Whom will you obey—the policeman, or God?

PEASANT—That goes without saying! No one is greater than God. To live for God, is the chief thing.

TRAVELER—Well, if you mean to live for God, you must obey God, and not man. And if you live according to God, you will not drive people off other people's land: you will not be a policeman, a village Elder, a tax-collector, a watchman, or, above all, a soldier . . . You will not promise to kill men.

PEASANT—And how about those long-maned fellows—the priests? They must see that things are done not according to God's Law. Then why don't they teach how it ought to be?

TRAVELER—I don't know anything about that. Let them go their way, and you go yours.

PEASANT — They are long-maned devils!

TRAVELER—It's not right to judge others like that! We must each remember our own faults.

PEASANT—Yes, that's right enough. (Long pause. The Peasant shakes his head and smiles.) What it comes to, is this, that if we all were to tackle it at once, with one push the land would be ours, and there would be no more taxes.

TRAVELER—No, friend, that's not what I mean. I don't mean that if we live according to God's will, the land will be ours, and there will be no more taxes. I mean that our life is evil, only because we ourselves do evil. If one lived according to God's will, life would not be evil. What our life would be like if we lived according to God's will, God alone knows; but certainly life would not be evil. We drink, scold, fight, go to law, envy, and hate men; we do not accept God's Law; we judge others; call one fat-paunched and another, long-maned; but if any one offers us money, we are ready to do anything for it: go as watchmen, policemen or soldiers, to help ruin others, and to kill our own brothers. We ourselves live like devils, and yet we complain of others!

PEASANT—That's so! But it is hard, oh, how hard! Sometimes it's more than one can bear.

TRAVELER—But for our souls' sakes, we must bear it.

PEASANT—That's quite right . . . We live badly, because we forget God.

TRAVELER—Yes, that's it! That's why life is evil. Take the Revolutionaries—they say: "Let's kill this or that Squire, or these fat-paunched rich folk (it's all because of them), and then our life will be happy." So they kill, and go on killing, and it profits them nothing. It's the same with the Authorities: "Give us time!" they say, "and we'll hang, and do to death in the prisons, a thousand or a couple of thousand people, and then life will become good." . . . But it only gets worse and worse!

PEASANT—Yes, that's just it! How can judging and punishing do any good? It must be done according to God's Law.

TRAVELER—Yes, that is just it. You must serve either God or the devil. If it's to be the devil, go and drink, scold, fight, hate, covet, don't obey God's Law, but man's laws, and life will be evil. If it is God, obey Him alone: Don't rob, or kill, and don't even condemn, and do not hate any one. Do not plunge into evil actions, and then there will be no evil life.

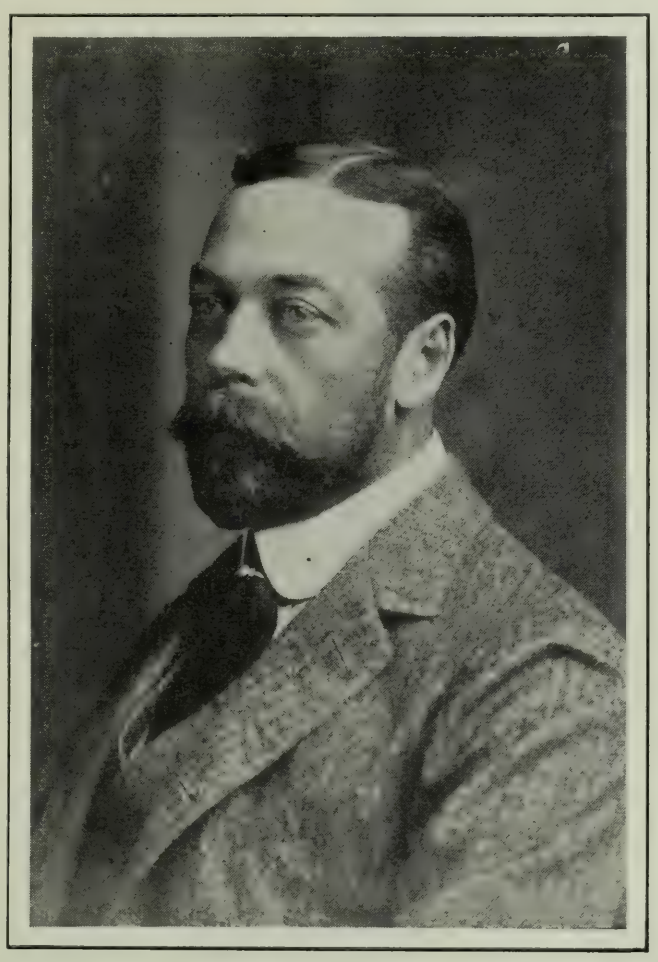
PEASANT (sighs)—You speak well, daddy, very well—only we are told so little! Oh, if we were taught more like that, things would be quite different! But people come from the town, and chatter about their way of bettering things: they chatter fine, but there's nothing in it . . . Thank you, daddy, your words are good! . . . Well, where will you sleep? On the oven, yes . . . The Missis will make up a bed for you.

YASNAYA POLYANA, RUSSIA.

A Tropic Day in Town

BY G. S. BRYAN

IN Egypt exiled, oft, methinks, when he
Grew weary of the Pharaoh's stately show,
Forth to the shore Theocritus would go
And list the murmurs of the shifting sea.
Each affluent wave a messenger would be
As, floating lazily, it whispered low:
"The springlet and the tamarisk thou dost know
Bade me to summon thee to Sicily."



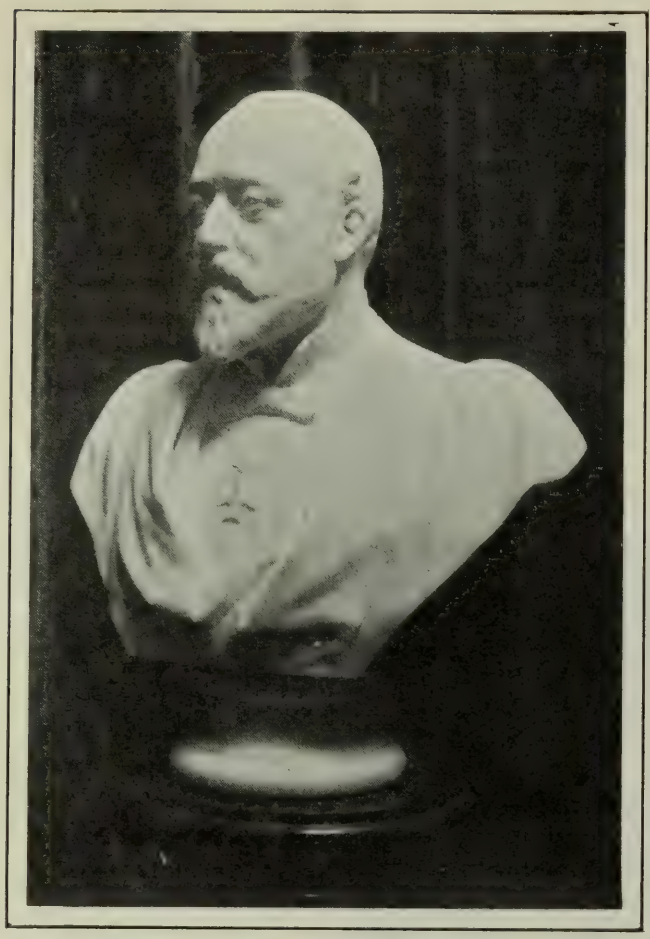
E'en so at times, 'blown 'twixt these frowning walls,
A wind comes to me through the heat and press,
Laden with forest fragrances, and calls
Me back again to range the wilderness.
"An isle awaits thee in the northland mere—
What dost thou here," it cries, "what dost thou here?"

BROOKLYN, N. Y.

England's Dead and Living King

BY JUSTIN McCARTHY

THE unexpected, almost sudden death of King Edward VII has changed the melodramatic passions of the political crisis into tragic emotion. We all knew that the Sovereign had been for some time in a weakly condition of health and was under medical care and that he had sought in a visit to certain continental health resorts a restoration of health and strength to enable him to continue his almost incessant labor in the duties of his position as a ruler. But the public in general had no idea that the life of King Edward was in any manner in serious danger. Therefore, when on Saturday morning the news was flashed over England and over the world in general that King Edward VII had passed away the effect in London and thruout this kingdom generally was one of utter consternation.



KING GEORGE V.

I may add that the moment the shock of that first consternation was over it was succeeded by a national feeling of sorrow. The late King had ever since he succeeded to the throne made himself the devoted, consistent, unchanging advocate of international peace and of national advancement and happiness. He had given himself up from first to last to the policy which would substitute in every possible case international mediation and arbitration for the policy of war. To him we owe the creation of some of the most important and most promising international councils of peace which the modern world has known. In connection with these institutions his name must have an eternal memory and eternal honor in the history of his reign, even if that reign had not as it has other claims to unfading historical record.

He took a deep interest in every movement which concerned the welfare of his subjects, whether educational or charitable or artistic, and I think my countrymen in the United States have probably already come to know that he was sincerely well disposed toward the national claims of the Irish people. I am not myself much given to the worship of monarchy, or to the assumption that the monarchs of this world are habitually endowed with moral attributes much superior to those of their average subjects, but I think there is every practical reason to believe that King Edward VII did from the moment when he succeeded to the throne devote himself to the best of all his intelligence and his power to the promotion of peace upon earth and good will among men.

The public of the United States will have learned long before this that the new Sovereign of Great Britain has been already proclaimed as King George V in the person of the late King's surviving son. It must have occurred to the

BUST OF KING EDWARD VII.
Made last year by Albert Pierce-Joy, who made the bust of Chauncey M. Depew for the Lotos Club, New York.

minds of many here in England and abroad as well that the name of George is not one of the most felicitous augury for a new English Sovereign in our days, but of course it would have been hardly possible for the new King to contemplate any effort at evading the inauspicious auguries even of such a name by adopting some other of those bestowed upon him at his birth—Frederick Ernest Albert.

There seems, however, so far as one can judge from the articles in all the newspapers of whatever political denomination, to be a general impression that the present Sovereign has learned much from his father during the latter's reign, and that we may hope he is destined to win some happy associations for the title of King George than that name of sovereignty has yet won in the history of England.

The death of King Edward and the succession of King George have suddenly turned away the attention of the whole public in all parts of these islands from any thought for the hour of the great political and parliamentary struggle which had just been going on and which had absorbed the attention and indeed excited the passions of the whole public to a degree such as had hardly been effected by any other political crisis of our recent times. The majority of the public in these islands had only just given the clearest and most practical evidence that they held advanced Liberal or Radical opinions and had been enabled and even invited to express their opinion whatever it might be by the House of Lords itself. The greatest battle of our modern days between the British public and the House of Lords had just come to its end and that end was the most complete defeat possible for the occupants of the hereditary chamber.

The great financial scheme which the House of Lords rejected and on the rejection of which an appeal had to be made to the country at large by means of a general election, at which the Government and the Commons majority won a full victory, has now been accepted without the slightest serious alteration by the Peers themselves. Both Houses of Parliament seeing that there is nothing else to be done, adjourned for the spring holidays, and there was at the time of the late King's death no Parliament sitting at Westminster. This does not, however, by any means signify that the whole campaign is over. The majority of voters in these islands do not intend to give the House of Lords ever again any possible opportunity of attempting to assert the claim of the Upper Chamber to seize any right of control over the financial policy of the Commons or even to maintain in the future the same constitutional privileges which they had been authorized to exercise during the whole of the past.

The House of Commons and indeed the vast majority of the public in these British islands have made up their minds that they will not allow this struggle to come to an end merely with the complete surrender of the Lords on the question as to their claim to the right of interfering with the control of the elective chamber over the finances of the kingdom. The national determination is that the present constitutional campaign must

include the complete reconstruction of the second chamber on principles distinctly consistent with the theory of a genuine and a constitutional senate in a kingdom like that of Great Britain and Ireland.

Therefore, as soon as Parliament resumes its regular business sittings the Government may be expected to undertake at once a series of measures intended to provide the kingdom with an entirely new form of legislative second chamber in which we may feel well assured that the hereditary principle will not be the one and only theory of membership, if indeed it be allowed to have any place whatever as a condition of senatorial position. Romantic admirers of the House of Lords, and I believe there are such to be found even still among the outer public, may, I think, be allowed to feel grateful to the House of Lords for having compelled the Commons and the rational public in general to insist on making the crisis thus brought about an occasion for settling the whole dispute once for all and supplying Britain with a second chamber such as other civilized countries have—such as, for instance, is existing in the Senate of the United States.

In the meantime and before the late King's death a sudden reaction seemed to come over the tone and temper of the British public—indeed over the very appearance of that British public. With the adjournment of the Lords and Commons a positive flight of legislators took place from these shores. The Prime Minister, Mr. Lloyd-George, and numbers of their colleagues rushed at once to some inviting places on the European continent; the Chancellor of the Exchequer, I may say, enlivened in his holiday by the pleasant companionship of my dear old friend, T. P. O'Connor, while the Prime Minister had for his fellow traveler the First Lord of the Admiralty, Mr. Reginald McKenna. A very fervor for continental travel seems to have seized every one possessed with the means to gratify himself and his family with a visit to some continental capital or bathing place, and it so happened that the interval of the parliamentary recess was also the period when

SCENE AT CHARING CROSS STATION.
Crowd waiting for the Proclamation of King George V. All who could do so climbed to the tops of cabs and wagons.

it became necessary for Lord Gladstone to start for South Africa, the scene of his future administration as Colonial Governor. Those of us who were left behind felt as if we did not exactly know what we had to talk about in the meantime and until the parliamentary recess should be over. We were at the same time, or at least many of us, thoroly convinced that we had said quite all that we had to say, and said it over and over again, on the questions now disposed of and that we had better keep to merely unparliamentary topics until the reassembling of Lords and Commons compels us to give our full attention to the new and most important measures and debates which that not very distant event is certain to force on our attention.

The very sudden death of Mr. Edward H. Cooper at Newmarket on the 26th of last month removes one of the cleverest of our younger novelists, for Edward Cooper was very little over forty and one who was equally well known as a writer of racing novels and of children's stories and stories about children. His novels of horse racing appealed naturally to the lovers of that sport, but also even to those who, like myself, must confess to taking no interest in it. But they appealed to me for the character drawing and the writing, which apart from the charm of his style had the charm of his personality—the personality of a man of the world—of wide human sympathy and intellect. His first novel, "Geoffrey Hamilton," is not so well known as his later ones. It contains a delightful description of Oxford and Oxford life. Mr. Cooper made his first full success with "Mr. Blake of Newmarket," and his last novel, also a great success, was "A Newmarket Squire." It is strange that his death should have occurred at Newmarket—the scene of two of his most successful stories. Another very clever story of his with a very original idea is "A Fool's Year." But to me the best of all of his

PROCLAIMING THE NEW KING.
Scene at Charing Cross when the heralds announced the Accession of King George V.

ROYAL CHILDREN SALUTING AT PROCLAMATION OF GEORGE V.

works is the one in which he seemed to me to aim highest, "The Eternal Choice." I do not know if it was as popular as some of his others, but it is a novel that should last. My first acquaintanceship personally, which soon deepened into a friendship, with Edward Cooper was made some twelve or thirteen years ago. It began during some visits which I then used to pay to Westgate, a Kentish seacoast town and health resort which he and I were both visiting with the same object, that of seeking restoration to a life of literary work interrupted by a breakdown caused probably by somewhat too much of that fascinating daily labor.

"The Romance of Mademoiselle Aïssé," the latest literary production by Mrs. Campbell Praed, the distinguished novelist, has just been brought out by Mr. John Long, the popular publisher of Norris Street, Haymarket, London. In a short introductory note the authoress tells her readers that those who are acquainted with certain memoirs of the early part of the eighteenth century will know already that in this volume she has had to draw but very slightly upon her imagination. "The actual story," Mrs. Praed further says, "of this pathetic, though, as regards history, comparatively unimportant life is so dramatic that even for purposes of fiction it would need no alteration." I shall not tell my readers of THE INDEPENDENT any of Mademoiselle Aïssé's story, of which a good deal may be found narrated in the letters of Bolingbroke and of Horace Walpole. I much prefer to leave them for the present to make their study of this thrilling life thru the pages of Mrs. Praed's volume. I do not hesitate to say that I think this book is, on the whole, the most artistic addition to literature its authoress has given to the world, even although she had the subject of her novel already provided for her by history itself. It is not after all a very rare faculty to be able to evolve from one's imagination a telling romantic story. But to create from a few historical memoirs and letters such a brilliant and thrilling life-portraiture as we have in this "Romance of Mademoiselle Aïssé" is indeed a distinct artistic suc-

cess. The book is all the more likely to be enduring in the impression it makes upon its readers because of the apparent ease with which the story is told. We feel as if we were listening to the narrative of some one who is pouring out to us her memories of the life of a dear friend of whose life she had been the close companion and is well qualified now that the friend has passed away to be the authentic interpreter. I shall be much surprised indeed if this volume does not find a welcome beyond that of the ordinary readers of the season's novels.

I need hardly tell my American readers that the past month or two have not found here in Great Britain a community much at leisure to give encouraging attention to literature. Public life presented them with subjects more real and realistic and at the same time more thrilling and startling than the most romantic and inventive of story tellers could have offered from his fancy with the object of capturing their full attention. The sudden death of one king and the immediate proclamation of his only living son as his successor and all the various ceremonials, some sad and some splendid, belonging to these events naturally occupied for their time the attention of the British public in a manner unfavorable to the appeals of mere romance. Some of the ceremonials belonging to the accession of the new Sovereign were accomplished in every considerable town thruout the three kingdoms, and therefore the most unobservant or self-absorbed or indifferent member of our community found his attention compelled to the fact that he had seen the last of the reign of King Edward VII and had become a subject of King George V.

LONDON, ENGLAND.

Another Step Toward International Peace

BY JOHN W. FOSTER, LL.D.

EX-SECRETARY OF STATE.

THE readers of THE INDEPENDENT who are familiar with the history of the First Peace Conference at The Hague in 1899 will recall the fact that the chief object for which the conference was called—the limitation of armaments—failed of adoption, and that the most important action of the conference was the treaty of voluntary arbitration. It will also be recalled that the adhesion of some of the most powerful nations was secured very reluctantly, and the belief was prevalent in Europe that the measure in its imperfect form would prove of very little benefit in actual practice.

It is a matter of pride for America that the two greatest republics of this hemisphere were the first to recognize the efficacy of this treaty, and, by invoking the services of the Hague Court, gave life and usefulness to what was believed by many to be an inanimate and impracticable instrument. The United States and Mexico united in submitting to a tribunal organized under the provisions of The Hague treaty the Pious Fund claim, and thus in a peaceful manner adjusted a controversy of long standing between the two nations. But, said the sceptics, the case of Mexico was one involving a money claim; the test will come when nations heated to the point of war are called upon to yield their pretensions to the decisions of a Hague court. Such a case soon arose, when Great Britain, Germany and Italy sent their fleets to blockade the ports of Venezuela and bombard its forts. When Venezuela, influenced by Minister Bowen, appealed to The Hague treaty for a determination of the question at issue, these powerful nations sought to evade it by asking the President of the United States

to act as sole arbitrator. President Roosevelt, actuated by the same motive as inspired him to submit the controversy with Mexico to The Hague, declined the invitation and referred them to the same tribunal. In making a report to Congress of his action he used this notable language:

"It seemed to me to offer an admirable opportunity to advance the practice of the peaceful settlement of disputes between nations, and to secure to the Hague Tribunal a memorable increase of its practical importance. The nations interested in the controversy were so numerous, and, in many instances, so powerful, as to make it evident that beneficial results would follow from their appearance at the same time before the bar of that august tribunal of peace."

In this way the Government of the United States has been the leading factor in giving efficacy to the arbitration feature of The Hague international peace treaty. And we are filled with patriotic pride to know that our Government has recently been an active instrument in giving life to another provision of that treaty of scarcely less importance.

The Peace Treaty of The Hague consists of four parts. The first pledges the signatory powers "to use their best efforts to insure the pacific settlement of international differences," and to this end three methods are provided: First, mediation and good offices; second, commissions of inquiry; and, third, international arbitration. Since 1899 the third method—arbitration—has been resorted to frequently and successfully; the second was utilized with marked success in the Dogger Bank Commission of Inquiry at Paris between Russia and Great Britain in 1905. But never since the signing of the treaty until quite recently has the first method—mediation—been brought into play to prevent the beginning of hostilities between two excited nations; and it was reserved to the American hemisphere again to become the means of giving life and energy to this most important method of preserving the peace of the world.

We have been informed in the public press of the preparations for war which have been going on between Peru and Ecuador over a boundary dispute, which was also likely to involve in hostilities Bolivia, Chili and Colombia. The declaration of President Taft at the late dedication of the Carnegie Palace of the American Republics in Washington, that the union thus cemented was to be a guarantee that no two unruly members of that union would be permitted to enter upon an unnecessary war, was received by the friends of peace with great gratification; but they read with much impatience the accounts of the march of the armies of the two quarreling nations to the disputed territory to settle the question by brute force.

Secretary Knox wisely concealed his measures in redemption of the President's pledge until the appropriate time to make them public. He displayed his intelligence of Latin-American politics by not approaching the threatening belligerents single-handed. He disarmed jealousy and resentment by associating with the United States the two most important of the South American republics, and the two which were the most disinterested — Brazil and Argentina. These three friendly states approached the belligerents with The Hague peace treaty in their hands, pointed them to the fact that they were all signatory parties to that convention, offered them their good offices as mediators in the dispute, asked that the march of the armies might be halted, and that steps be taken to adjust the dispute by peaceful means. Such a weighty appeal could not fail to be effective.

This event opens up a new era of enlarged usefulness for The Hague peace treaty. That treaty declares that it is expedient and desirable that any or all of the signatory parties, strangers to the dispute, should tender their good offices to states at variance, and that the exercise of this right can never be regarded by either of the parties in dispute as an unfriendly act. It is hardly too much to claim that this provision of The Hague treaty, if exercised by the European Powers as well as other nations of the world with the same wisdom and prudence as shown in the recent event by Secretary Knox, would in almost every instance prevent a threatened war. This South American case must be regarded as a new and important step toward general international peace, and it proves

that the advocates of universal peace are not mere dreamers or enthusiasts, but that they base their expectations upon practical methods. There will be no future wars if the parties to that international convention faithfully live up to its three provisions of mediation, commissions of inquiry and arbitration.

WASHINGTON, D. C.

Back to the Farm

BY GOVERNOR HERBERT S. HADLEY

[The work of Governor Hadley, of Missouri, in colonizing unoccupied tracts of remote country thru the National Farm Homes Association, may go down in history as his best achievement, altho his seventeen months in the gubernatorial chair have not been without events of importance. The movement to country life is taking hold rapidly. This article was obtained as an interview.—EDITOR.]

SO quickly in this country has the transition come from the abundance of pioneer life on to the present phenomenally high cost of living that the crisis in food prices brings with it the desperation of the unprepared. Men are confused. We find them swearing to economize by doing without meat; workingmen's unions and all sorts of laborers who are in need of nourishing food have nevertheless taken these vows to become vegetarians; suicides are not infrequent, for which no cause can be found except the fact that conditions of life were too hard. Nor does any remedy seem to be in sight in the present order, if men and women continue to flock to the city, increasing the number of consumers and depleting the number of producers. Statistics of trustworthy investigators indicate that the food shortage is not a fictitious thing. There are dark prophecies that in ten years, or twenty years, there will not be enough milk or eggs or butter, and certainly not enough bacon and beef, for the ever growing appetites.

Copyright, 1910, J. C. Strauss, St. Louis.
GOV. HERBERT S. HADLEY.

A clear relief from the present disproportion between supply and demand is afforded by the plans of the National Farm Homes Association. It lies in the simple economic principle of either diminishing the demand or increasing the supply. Our Association proposes to increase the supply.

Now there are really resources of food production in the Southwest and the West, and even in some parts of the East, as lavish as the seven years stores of Pharaoh and Joseph, and there is no need

that Jacob's sons or any one else should go hungry. Missouri is a typical State. It is not farmed as it might be. The agricultural college men tell us that if the Missouri farmers would carry on their work scientifically, preparing the soil as needed, and following precisely the directions of the experiment stations, the income from agriculture for this one State would be increased $30,000,000 each year. Nor is that all. There is 15,000,000 acres of land in Missouri which is virgin soil,—land that the plow has never touched. A bit hilly or rough, you may say some of it is, but it is not nearly as broken as New England or West Virginia, where the soil was contentedly tilled through several generations.

JOHN H. CURRAN.

I am accused sometimes of having the hobby of advising everybody to "buy a cow." If I do so advise, there would be ample excuse for it in the results which have attended every effort toward dairy production in Missouri. Strangers have come in,—amateurs from Illinois, and Michigan and New York and the New England States,—and in just a little while the Ozark region has given back to them an annual yield of $2,000,000 in dairy products. Here Archbishop Glennon brought in his Italian emigrants, a few years ago, who are getting rich at making cheese at Knob View. Several other foreign colonies of his are having the same good fortune.

The best proof of dairy possibilities is the cow of cows, Princess Carlotta, at the University Experiment Station in Columbia,—a splendid Holstein who is beating the world's record. In one day she gives 111 pounds of milk,—thirteen gallons and one pint.

Land may be secured in Missouri at $10 per acre and even less. The same prices may be found in Louisiana, Texas, Arkansas, Alabama, Mississippi, and various other States. The National Farm Homes Association will buy land in large quantities, and proposes to colonize its prospective farmers in communities of thirty-two families. Each member is to have forty acres, and in the center of the thirty-two forty-acre farms will be a central farm of 160 acres. The Association will own and direct the central farm, where there will be employed some of the larger machinery, such as ensilage and feed cutters, seed fans, manure spreaders and so on, which at intervals can be loaned to the small farms. The head of the central farm will be a trained agriculturist, who will assist the individual farmers to plan their farms, locating fields and buildings, advising as to crops and rotation of crops, and giving also the assistance of a creamery, cannery, saw-mill and other equipment to be located on the central farm. This head of the central farm will co-operate with the small farmers in marketing their crops, and will see that they get the advantage of all factors that may favor them. In raising stock and crops there should be a uniformity which will call for a certain standard, and thus create a demand for the products of the community.

It is planned that the farmer on his forty acres may become independent and own his own land, within a period of ten years. In the beginning he may be entirely without capital. The Association will provide everything for him. The estimated cost of each forty-acre farm runs at about $1,200,—say, $400 for the land; the same amount for buildings and fences; $300 to be paid

for stock and teams; and $100 for implements and other supplies. As a tentative estimate of what the forty-acre farmer may produce, the following schedule has been prepared. It is not too much to expect after the farm is fully established:

3 acres of tomatoes, net average, $50...	$150
1½ acres onions, net average, $100.....	150
2 acres potatoes, net average, $50.....	100
4 acres fruit, net average, $100.....	400
1 acre small fruits and berries.....	150
4 acres corn and cow-peas, net average, $40	160
4 acres ensilage and late rye.....	200
8 acres alfalfa	240
4 acres timber	25
3½ acres miscellaneous garden.....	200
4 acres clover	100
Cows, pigs, chickens, ducks, etc.....	500
Total	$2,375

Computing the extra cost of living, extra labor, annual payment and other expenses as totaling $1,375, this leaves a net annual balance of $1,000. To this may be added the rent of his dwelling, the fuel, which is on the ground, and also much material of different kinds, as fence-posts and the like.

Better results are here set forth than the average heedless farmer of the abundant past may have obtained, but these colonists will have constantly the benefit of first-hand suggestions from a trained instructor, and such guidance may make them better intensive farmers within two or three years than many are who have lived on the farm all their lives. These colonists will often meet to confer with one another and to receive instruction from the head agriculturalist and his assistants as to crops to be planted in the near future. Each of these small farms may be considered as experimental farms, and with National or State co-operation may be made very valuable in educational work in agriculture in general. Experiments may be carried on at little or no expense to the State, and may add much to the general knowledge of correct methods.

The Association is to be capitalized at $1,000,000. Colony units, consisting of thirty-two small farms and one central farm, can be planted at a cost of $50,000, and as the individual farmers pay off their indebtedness, new colony units can constantly be planted. It is proposed to place a general manager in charge of operations, and to have an examining board to pass upon the qualifications of applicants for the farms. We believe that prominent financiers, philanthropists, and public-spirited men and women can be enlisted in the enterprise and will serve as members of the board. The capital will be so employed as to return a fair interest to those who desire it, or persons may be willing to have their money employed continuously and may add their dividends to the surplus, thus allowing the trustees to assist more farmers.

The National Farm Homes Association effected organization early in May, electing me as its president, and John H. Curran, head of the Missouri Immigration Commission, as its secretary. To Mr. Curran is due the credit for much of the plan. He had hitherto so largely interested himself in bringing colonists to Missouri that when last year the Legislature passed the act providing for an Immigration Commission, he was by all means the logical appointee as Commissioner. Before the Association took form, we made up several expeditions into regions little traveled in Missouri, viewing the rich possibilities, which we had hardly realized before. One of our exploring parties went thru the very heart of the Ozark region, camping out and floating down the Current River, one of the swiftest streams in the country. Another trip was organized thru the drainage district of the State. One can easily see a reason for Missouri's vast unoccupied acres. The railroads in the early days, promoting colonization, threw out inducements for the people to settle near the termini of their lines. The longer distance the people went, the longer hauls had the railroads, taking them there and bringing back their produce to the markets. Missouri was on the way, the halfway place, and colonists were scarcely allowed to look out of the windows or get a sniff of Missouri's wild roses as they were hurried on to the Canaans beyond.

There is much land lying unused in all the States, and there are hundreds of owners anxious to dispose of it. These men, land-poor, can join with the capitalists, thru the medium of the National Farm Homes Association, and the outcome will be to the benefit of those

families who now can barely make both ends meet. When the grip of dire necessity loosens its hold, we may anticipate a higher order of social life. Schools of the best quality will be instituted in the colonies, and hygienic and sanitary measures will prevail. There will be no polluted water supply when thirty-two families co-operate for what is best. A good library can be maintained, and occasional high-class entertainments may be provided. The influence will even be felt by other farmers of the old sort, who will believe what they see in concrete form when mere talking of modern methods would never convince them.

JEFFERSON CITY, MO.

Ireland Long Ago

BY KATHARINE TYNAN

THE smell of the wet earth after the blessed rain
Brings back to me Ireland long ago,
When the silver mists were rising from off an emerald plain
In darling Ireland long ago.
When the grass so full of richness was higher than your knee,
And the sap was running wildly in every bush and tree,
Ochone! and every blossom was full of the honey-bee
In darling Ireland long ago.

The smell of the wet things after the bitter drought
Brings back to me Ireland long ago;
When all the streams were running and the hawthorn was out
In darling Ireland long ago.
When the mountain peaks stood purple above the wisps of cloud,
And the honey thrush and blackbird sang their dewy songs aloud,
And the trees drip-dripped with silver till their shining heads were bowed
In darling Ireland long ago.

The thirsty mouths all drinking that were so parched and dry
Bring back to me Ireland long ago.
For the land ran all refreshment and was praising God thereby
In darling Ireland long ago.
When the corn-crake called the night-long in the fields all dewy wet.
It isn't the English nightingale could make my heart forget.
Tho long it is and far it is, I'm not forgetting yet
My darling Ireland long ago.

GREENHURST, CHIPPERFIELD, HERTS, ENGLAND.

Literature

The Old Order Changeth

BURNS's prayer,

"Oh, wad some power the giftie gie us
To see oursels as ithers see us,"

is not apposite for this people. Americans have only to open one of a hundred books to see themselves mirrored as variously as visitors to a palace of mirrors at an exposition. A difficulty with the foreign observations is that they are apt to be inexact by the time they are printed. For Democracy is a living body, not a stony statue. Today its features may be photographed; next year a new beard makes pictures obsolete. *The Old Order Changeth** contains the observations of a genial native examiner. From his newspaper eerie near the country's center, Mr. White has turned his telescope on all sides and reports picturesquely and accurately, with more than usual reportorial insight and fidelity, what he sees transpiring today. Democracy, he discerns, is experiencing a conversion, a re-birth. In the days of Mark Hanna, the "most picturesque national leader" of his time, the boss of the bosses, the ruler of, by and for capital, the force of democracy was dormant. Prosperity was the national god to whom all political parties bowed.

But now for ten years there has been a movement among the American people, a movement that is today "one of the big, self-evident things in our national life." "It is called variously Reform, the Moral Awakening, the New Idea, the Square Deal, the Uplift, Insurgency; but it is one current in the thought of the people." The people show a new determination to control their government. "Ever since the party as a functional part of government became established in our American system it has been undemocratic." The few party leaders and convention manipulators have ruled the many. But by substituting direct nominations by the people at primaries for slate-making at conventions—a method already prevailing, more or less, over half the country—by ballot reform, by laws to limit and expose campaign expenditures, by adopting the referendum and initiative—an ugly name for a petty device—the people are laying hold of the governmental machine. They have not yet captured the chief checks on democracy—the State and Federal courts—for "probably Americans are the most conservative people in the civilized world." "The veto power of the courts is purely an extra-constitutional power interpreted into the Constitution by Chief Justice Marshall." Not content with Marshall's usurpations, the Federal courts are beginning to restrain State executives in the enforcement of State laws.

But, determined to be cheerful, the author sees in this stultification of the people's will a fine discipline. He tries to believe that it does the democracy good, makes it patient and self-restrained, to be thwarted by the odd judge in a court with an arbitrariness which no Western European people endures. In due time the courts follow public opinion. That's the consolation. But, while the ultimate submission of political machines to public opinion is not considered a sufficient reason for enduring them, why should the slow, uncertain adjustment of court interpretations to the popular will be considered sufficient reason for allowing them to shackle democracy? Even Czar and Sultan yield ultimately to a universal public demand. But such concessions do not make their governments democratic. Democracy is feeling the pain of the legal red tape that tightly binds its limbs; and, if the strictures are irremovable, perhaps it is as well to administer the mental sedative that the bonds are for its own good and will be loosened in time if it only howls loud enough. As a moving picture of democracy in action the book is valuable for student, politician, statesman and historian.

*THE OLD ORDER CHANGETH. *By William Allen White.* New York: The Macmillan Company. $1.25.

The History of Religion

THE second volume of Dr. Hastings's great *Encyclopedia of Religion and Ethics*[1] more than fulfils the promise of the first. The articles are written by more than one hundred and fifty specialists from various countries, including England, America, Germany, Japan, France and India. Too much praise cannot be accorded to such comprehensive and critical articles as that of Professor Schrader on "The Aryan Religion," that of Professor Browne on "Bab, Babis," and those of Professor Paton on "Ashtart" and "Baal." A large part of the information put into these and similar articles would otherwise be almost inaccessible to the average student of religion. As the work progresses it becomes evident that subjects connected with other religions and those in the Christian religion which are of interest in the study of comparative religion are being more thoroughly and extensively treated. For example, no word is given to Baruch, Baur, Beza or Bossuet, but Asoka and Berosus receive careful and scholarly treatment, and Professor Peake devotes twelve columns to a critical and historical discussion of "Basilides and Basilidians," a little more space than is given to Professor Warfield's fine article on St. Augustine.

One naturally compares this great English undertaking with the similar work that is progressing in Germany under the able editorship of Prof. F. M. Schiele, the first volume of which has recently appeared.[2] The scope of the German work does not include ethics as the other does, and its limitation of about half the number of volumes curtails the size of the corresponding articles somewhat, but it contains much in the historical and biographical line that is excluded from the English work. Again Professor Schiele gives greater space comparatively to articles dealing strictly with the Christian religion and its relation to Western civilization. According to these encyclopedias the value of Jacob Boehme's life and work for an understanding of the religions of the world, as compared with his influence in the development of Christianity, may be estimated by the fact that Hastings devotes to him ten columns against Schiele's one and a quarter, while their Augustine articles are of nearly the same length. The German volume contains good articles on Bosnia and Berlin; the English, of course, has nothing. On the other hand, the discussions about the African Berbers and Bantus run up to some sixty columns in the Hastings volume, but these races are not even mentioned under separate headings in the other work. Both undertakings are carried on in the same broadminded, scholarly way. The bibliographies of the English work are more exhaustive, and the articles are generally of a character that would appeal to the student of religion rather than to the general reader for whom the German work is particularly written. Each will add materially to the resources available for a true comprehension of Christianity in relation to the other religions of the world, past and present.

[1] ENCYCLOPEDIA OF RELIGION AND ETHICS. Edited by *James Hastings, M.A., D.D.*, with the Assistance of *John A. Selbie, M.A., D.D.*, and Other Scholars. Vol. II., Arthur-Bunyan. Charles Scribner's Sons. $7 net. Cloth.

[2] DIE RELIGION IN GESCHICHTE UND GEGENWART. *Herausgegeben von Friedrich Michael Schiele.* Erster Band. Von A bis Deutschland. Tübingen: Mohr.

Great and Greater Britain. The Problems of Motherland and Empire, Political, Naval, Military, Industrial, Financial, Social. By J. Ellis Barker. New York: E. P. Dutton & Co. Pp. xi, 380. $3.00.

For Americans who like to think that there is such a country as England, and even more for Americans who have social ties with England, or any joy in the great traditions of England that belong to the entire Anglo-Saxon race, Mr. J. Ellis Barker's *Great and Greater Britain* is a melancholy book. It is a small but ambitious volume, for in less than four hundred pages Mr. Barker discourses of the problems of motherland and empire, and of political, naval, military, industrial, financial and social conditions in England. And all to one end—to prove that England is at the parting of the ways, and that terrible, almost unthinkable things are soon to happen to her. England, as Mr. Barker views her situation, may soon be of the "down and out" club, along with Phœnicia, Carthage, Athens, Rome, Constantinople, the Arab empire, Amalfi, Pisa, Genoa, Venice and the Dutch em-

pire. "The position of the empire," according to Mr. Barker, who dates his survey September, 1909, "is evidently a most critical, tho not a desperate one." The last half of this sentence comes as an amazing relief to the reader who hitherto has had some confidence in England's greatness. It is cheering to realize that at least up to September last the situation was not quite desperate; and as one travels further thru Mr. Barker's pages even greater relief comes gradually into sight. Mr. Barker was a German. He is now a British subject; and in his great zeal for the future of his adopted country he is eager to point a way out, and to show that England can get on safe and permanent footing on the far side of the bridge, and steer clear of the down and out club, if she will only act on his counsel, and lose no time in doing so. Mr. Barker's suggested means of salvation are quite numerous; but the most important are a navy as big as the combined navies of this country and Germany; protection, which will get rid of cheap labor and cheap men; universal military service; an imperial senate, with representatives of all the over-sea dominions willing and eager to help to manage from London the entire British empire, and a reform of the education system—primary, secondary and university—on a model which Mr. Barker sets out with much detail.

The New International Year Book. A Compendium of the World's Progress for the Year 1909. Edited by Frank Moore Colby and A. L. Churchill. New York: Dodd, Mead & Co.

This is recognized as an indispensable reference book for public and college libraries, but its sphere of usefulness is much wider. It affords the best methods by which the general reader can "keep up" with the course of events the wide world over. A few minutes will give him a sufficient idea of what discoveries have been made in chemistry or astronomy; what the philosophers and psychologists are puzzling their brains about; what has been done to the Panama Canal; what books are read in this country and Europe, and what is the political and commercial status of any nation. He would be a man of narrow range of ideas who did not find in casually turning over these 700 pages something of interest and importance to him. The style of this *Year Book* is similar to the "New International Encyclopedia," which it serves as a supplement. There are forty-two full page plates and ten new maps.

The Biography of a Boy. By Josephine Daskam Bacon. New York: Harper and Brothers. $1.50.

To an author who can produce in one year two books as unlike as the thoroly delightful novel "Margarita's Soul" and the piece of irresponsible fooling called *The Biography of a Boy* the palm for versatility must be awarded. The boy is Binks, the erstwhile hero of a former book, "The Memoirs of a Baby," and his biography is a continuation of the story of his pranks and pleasures, education, vocation of play and avocation of mischief. Binks and his small brother Thomas are healthy, happy youngsters and natural enough to be lovable, but as much cannot be said of their relatives who are supposed to be grown up. Binks is particularly unfortunate in his choice of parents, who are an irreverent cad and a pink-and-white idiot, to judge by their reported conversations, which are all we have to go by. There is always a touch of farcical exaggeration in Mrs. Bacon's sketches of children; but we can forgive much to the rollicking fun and good-nature of it; it is not so easy to pardon the lapses from good taste and credibility in her depiction of mature people. We make one exception to this criticism —Great-Aunt Emma is perennially delightful.

A Popular History of the Church of England. From the Earliest Times to the Present Day. By William Boyd Carpenter, Bishop of Ripon. New York: E. P. Dutton & Co. Pp. xv, 517. $1.50.

A history of the English Church is necessarily a history of England; for ever since Christianity was embraced by King Ethelbert of Kent at the behest of St. Augustine, Church and State have been inextricably intertwined in English national life. The Bishop of Ripon has consequently presented to his readers a new history of England, written from a

point of view which belongs to his position as one of the dignitaries of the Established Church. But while the Episcopal standpoint is perceptible thruout and while many of the Bishop's pages constitute for the English Church an *apologia pro sua vita,* Bishop Carpenter shows much wide-minded tolerance and a ready recognition of the many faults and failings of the Church in its long struggle for dominance. It is well worth while, in these days of severe criticism of the Church—at a time when the connection of Church and State is being examined and judged—that the English nation, and all the great English-speaking over-sea peoples who look back to England as their ancestral home, should be reminded of the immense debt they owe to the English Church in the long fight of civilization against barbarism, and also of the stand that was taken by the national Church against the overweening claims of the Papacy, in the days when there were no Nonconformists nor free churches to fight the battle of liberty. Bishop Carpenter's volume is not put forward as a new contribution to historical knowledge. It includes the results of no individual research into first sources. It is only, as it professes itself to be, a popular version of the history of the English Church, written for young students, but giving to the general reader in easy form the connected story of what the Church of England has done and suffered from the third to the twentieth century.

Social and Industrial Conditions in the North during the Civil War. By Emerson David Fite. New York: The Macmillan Company. $2.

Professor Fite's new book is so acute in its analysis and so important in its scholarship that we wish it could have been written in a style more likely to attract the attention of the lay reader. In topical chapters it presents exhaustive accounts of agriculture, mining, transportation, manufacturing, commerce, capital, labor, education, amusement and charities, based upon wide studies in unusual sorts of contemporary newspapers. Scholars and teachers will have to use it, and will find its materials spread before them clearly and suggestively. Their classes in the history of the Civil War period need the facts which the author has collected to prove that fighting was not the only interest in the United States while the war was in progress. But the laity needs this knowledge quite as much as the professed students. It is almost impossible to dispel the common notion that when war begins all else stops. Every one who has lived thru a war ought to know better, but does not. The fact is, as Professor Fite here proves it beyond contention, that the economic development of the North proceeded thru the years of war as if there had been a period of profound peace. It is perhaps too soon to write a history of the United States since 1850 with the Civil War relegated to the place of an episode. Yet this work clearly points thitherward. Slavery must have collapsed in the face of Northern industrialism anyway. National expansion must have occurred to meet the economic organization of society upon national lines. The nation of today rests upon an economic process in which the Civil War marks a transition which it did not control.

Autour d'un Prêtre marié. Histoire d'une Polémique. Par Albert Houtin. Paris: Albert Houtin, 18, rue Cavier. 3 fr. 50.

The reader will learn from this volume what a controversy arose in France over the volume *Un Prêtre marié,* Charles Perraud, by the Abbe Houtin, which showed that the distinguished Canon Perraud had lived for many years in marriage relations in which he privately gloried, but which he kept secret from the world out of concern for the career of his brother, the distinguished Archbishop and Academician. The present volume contains a mass of the polemic which grew out of the exposure of the Abbé Perraud's marriage. It is well worth reading for the light it throws on ecclesiastical questions. We quote only a single passage from a letter of the excommunicated Jesuit, George Tyrrell:

"Sabatier makes a curious criticism of your book. He does not know that the Church regards a secret consent, between baptized persons, as sufficient for *valid* marriage in certain circumstances. I have no doubt that Perraud regarded the prohibition of priests' marriage and the prescription of witnesses as

matters of positive law, not affecting validity; and that he intended marriage and not concubinage. I do not commend the practice, but I am satisfied that the marriage, tho illegitimate, was valid."

And again:

"A good handful of the priests in England are married—and they are better men than most who are not."

M. Sabatier, among Protestants, severely criticised the book, and joined with the Bishop of Nevers in condemning the publication of the Abbe Perraud's letters to M. Hyacinthe Loyson.

Literary Notes

....Rudolph Otto is one of the most promising of the younger Biblical scholars of Germany. His Hanover popular lectures on the "Life of Christ" are translated from the third German edition by Mr. H. J. Whitby under the title *Life and Ministry of Jesus* (Chicago: The Open Court Publishing Company). They summarize briefly the positions of advanced critical scholars on the historical character of the Gospels, the events of Jesus's life, and the religious value of his teachings.

....The increased attention now being paid to our criminal law and the general desire for its reform are manifested by the appearance of the first number of a bi-monthly devoted to this subject, the *Journal of the American Institute of Criminal Law and Criminology.* It is edited by Prof. James W. Garner, of the University of Illinois, and published at 87 East Lake street, Chicago ($3). Besides half a dozen contributed articles it contains abstracts of judicial decisions and statutes, and current literature. The list of periodicals on criminology contains over sixty titles, but America is poorly represented, so there sems to be a free field for a journal like this devoted to the scientific study of this important subject.

....The psychological phenomenon of religion has of late attracted the attention of many students, but they have viewed it from an outside and unsympathetic standpoint. Therefore G. W. Henry's *History of the Jumpers,* or *Shouting, Genuine and Spurious* (Waukesha, Wis.: Metropolitan Church Association) has a unique interest for it is written by one who believes in such "outward demonstrations of the Spirit" and had taken part in them, as the following quotations shows: "When our turn came to bear witness to the joys of salvation, we arose with a cup brimful, and as we gave utterance to our feelings, the Angel of the Covenant plunged into the pool and so agitated the waters that eve--- nerve of our body vibrated like a Jews' harp; and as has often been the case on like occasions, before and since, we were raised on tip-toe and began to hop, unable to control our motions, tho perfectly conscious of our condition, and while trying to get back to our seat, hopped on the toes of the Doctor and other brethren, and finally fell back into their laps. This made no small stir in the camp. Some shouted, others wondered, and said they had never seen it after that fashion before. But the love feast went on until it blazed like the burning bush."

Pebbles

Bill.—Jake said he was going to break up the suffragette meeting the other night. Were his plans carried out?

Dill.—No; Jake was.—*Life.*

"Just think of it—a full table d'hote dinner for 30 cents; oysters, soup, fish, roast duck, salad, ice cream, fruit, demitasse!"

"Where? ! ! !"

"I don't know—but just think of it."

Teacher.—Who is the greatest inventor?

Shaggy Haired Pupil.—Pat Pending, I guess. I see his name on more inventions than I do on any other man's.—*Chicago Tribune.*

The stranger laid down four aces and scooped in the pot.

"This game ain't on the level," protested Sagebrush Sam, at the same time producing a gun to lend force to his accusation. "That ain't the hand I dealt ye."—*Everybody's.*

"You look blue and regretful."

"I am. I spoke hastily to my wife this morning."

"Is it possible?"

"Yes. She asked me if she could have two spring hats this year and without thinking I said 'Yes.'"—*Washington Star.*

For four successive nights the hotel man had watched his fair, timid guest fill her pitcher at the water cooler.

"Madam," he said on the fifth night, "if you would ring, this would be done for you."

"But where is my bell?" asked the lady.

"The bell is beside your bed," replied the proprietor.

"That the bell!" she exclaimed. "Why, the boy told me that was the fire alarm, and that I wasn't to touch it on any account."—*Success Magazine.*

THE SEED CATALOGUE.

I love the seedman's picture book;
  It is a treat.
With avaricious eyes I look
  Upon the beet.

For gardening I have the craze;
  I'll send my cash,
And buy the seeds from which to raise
  Some succotash.

I'd like to plant some pickles, too,
  In my back yard.
I think that I could grow a few;
  It isn't hard.

I simply yearn to scatter seed;
  I'm all agog.
It certainly is fun to read
  The catalog.

—*Kansas City Journal.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Roosevelt's Guildhall Address

We are not of those who will abuse ex-President Roosevelt for speaking his mind, with some risk of the charge of discourtesy, on the responsibility of Great Britain to maintain peace in Egypt. Mr. Bryan has hastened, in an address to an English audience, to tell the British that he would not have done so impolite an act; and Mr. Hearst has grandiosely informed the British people from Paris that Mr. Roosevelt was not only impudent but all wrong in his judgment of the Egyptian question. Neither of them is willing to be held responsible for the ex-President's utterances, but we imagine that their anxiety will not disturb him.

Egypt is not England's concern alone. Good order there concerns us also. Not a few American citizens live in Egypt, and thousands visit the country. More than this, Egypt does not belong to England, but to the great Powers, and has been committed to Great Britain with the injunction to keep order there. Great Britain is under international treaty their trustee, and has, on the whole, managed her trusteeship admirably. It was imposed upon her because Egypt could not maintain order, neither could Turkey. The great Powers had to take the responsibility, and they committed its direction to Great Britain. That makes a serious factor in the question raised as to the courtesy or discourtesy of Mr. Roosevelt in his frank expression of opinion and advice. It is of no use to laugh at him and say that he had been only ten days in Egypt; he was not ignorant of the facts, and all his knowledge was not gained on his return from the Sudan.

So much for the charges of discourtesy and ignorance. Something more needs to be said as to the justice of Mr. Roosevelt's judgment. Our readers know that of late there has grown up in Egypt a spirit of rebellion against British occupation, which had its culmination in the murder of the Egyptian Premier, Butros Pasha, by an Egyptian "patriot." They also know how frankly and impressively Mr. Roosevelt in Cairo warned the people against sympathizing with political assassination. But perhaps they do not know how wide that sympathy with the assassin was. He was tried and condemned to death, but the court that tried him allowed the native lawyer to defend the murderer on the ground that he was a hero resenting a tyrannical Government. The address was not meant as a defense, but to stir up the populace. At its close he turned from the court and addressed the prisoner directly:

> "If your great soul refuses to live enchained, if you do not wish to live in the bagnio with brigands and evildoers (for that is all the pity a merciful Judge can give you), arise, go to your death with a brave heart and a firm step. For death will come to you tomorrow if not today and will not be denied. Go, my child, go to your God, who holds the scales of sublime equity untrammelled by the necessities of time or circumstance. Go; our hearts go with you, our eyes will weep for you forever. Go; your death sentence, pronounced by human justice, may prove more than your life, a great lesson to your people and your country. Go. If man has no pity for you, Divine mercy is fathomless. Farewell, my child. Farewell, farewell!"

With such contempt of court allowed, such provocations, such incitements to crime, such bombastic glorification of

the murderer permitted by the court, is it strange that men should ask for a firmer control? Mr. Roosevelt said no more than has been said over and over again in England. For things have been growing worse the last twelve months, and the Government under Sir Eldon Gorst has been less efficient for order than was that of Lord Cromer. Mr. Roosevelt was praised when in Egypt he said of the assassin that such a man "stands on a pinnacle of evil and infamy, and those who apologize for or condone his act, directly or indirectly, whether before the deed or afterward, occupy the same bad eminence." The same Egyptian journals which only mildly condemned the murder because they had to, are now savage against Mr. Roosevelt for his address in London.

With all this said in support of the necessity of maintaining order in Egypt, and with all recognition of the success of the British administration which has given Egypt a better government and more prosperity than it has known for a thousand years, it yet remains true that the best way to secure order is to gain the good will of the people by giving them an increasing share in the government as they are fit for it. This is not inconsistent with the strict and even stern maintenance of order. It is complained of by conservative and financial interests that Sir Eldon Gorst's administration is too lenient, too subservient to native feeling. That may be true; but he is right in the desire to conciliate and to give to the Egyptians more and more influence in the government of Egypt. But they do have no small share already, even more than the natives have in the government of French Algeria. They have their Khedive, their Cabinet, their legislative assemblies, their courts, their municipal councils and their elections. Their action is overseen by a British adviser to the Khedive, whose advice is potent and who will not hesitate to prevent unwise action; but where there is no absolute final authority there is yet free counsel and advice. But it is the aim of the British control, under Mr. Asquith's Government, to enlarge native responsibility. This will not prevent sporadic violence or insurrection, which ought to be put down vigorously. In the end conciliation will win, as it has in South Africa. There General Botha, who seven years ago was at the head of the army fighting Great Britain, is now the Premier of the entire colony. That is a wonderful victory for conciliation and confidence; and the credit of it is due to Campbell-Bannerman, the Liberal Prime Minister of Great Britain; and his policy was more bitterly attacked by the timid Conservatives than they are now attacking Mr. Asquith and Sir Eldon Gorst. We do not believe that Mr. Roosevelt's speech would discount the policy of developing self-government, such as he has supported in the Philippines. He simply wants order and peace. It is ridiculous to assert that his speech is "a blow to Ireland," or to any other application of the principles of home rule.

A Peace Commission

In our issue of May 12 we advocated the passage of the Bartholdt bill before Congress providing for a commission of five members to visit the chancelleries of the world and report back articles of a world federation limited to the maintenance of peace, so that the recommendations of our delegates to the Third Hague Conference might be well considered and far-reaching. We also remarked that Mr. Roosevelt's great peace speech at Christiania and its concluding sentence in which he said that the ruler or statesman who should bring about a world federation "would have earned his place in history for all time and the gratitude of all mankind," suggested him as the man to head the commission when appointed.

Last week it was announced in Washington that the bill will be amalgamated with a somewhat similar bill of Mr. Bennet's, and the new bill will be reported back favorably to the House by the Committee on Foreign Relations. It is now expected to pass this session in both the House and the Senate. Mr. Taft has indorsed the idea, and it is stated he will invite Mr. Roosevelt to become chairman of the commission. This is most gratifying news. It means that the President and Congress are committed to the true philosophy of the peace

movement which requires world federation as a prerequisite for universal peace, and that the one American who is best known abroad is likely to lead in the movement.

There is little enough time before the Third Hague Conference meets in 1915 for this commission to study the history and philosophy of the peace movement and the work of the First and Second Hague Conferences. It will require the most patient study and the highest statesmanship to make a report at once practical enough to be acceptable to the nations and far reaching enough to end war. Still it can be done. The public sentiment of the world is ready. Let Congress authorize the commission. President Taft can be relied on to fill it with the five greatest peace statesmen in America. Emerson has said, "History is nothing but the record of the decline of war, the slow decline." Will not this commission seize the opportunity to become the greatest maker of history since the world began?

A National Bureau of Public Health

When there was some question a quarter of a century ago of organizing a National Department of Agriculture, all the city dwellers and most of those engaged in industries and manufacture, and, indeed, most of the dwellers in the East, were a little impatient in the matter. Why should agriculture have any advantage in this respect over manufactures or commerce? They could be managed in the departments of the Interior and the Treasury; why should not agriculture be satisfied with the same attention? We have had a Department of Agriculture for some twelve years now, and there is probably no one in the country who fails to see how much it has accomplished, but not only that, how much would have been left undone, very probably, only that agricultural affairs were in the hands of a great national department of government, under a broad-minded Secretary, as a consequence of whose influence there has been the most wonderful development of farming and of farm productivity that probably was ever witnessed in all the history of the world. Some of this might have come even tho there had been no national Department of Agriculture, but there is no one who thinks for a moment that anything like the great advance that has been made in agriculture in the United States would have come under the old conditions.

The results of the establishment of the Department of Agriculture were so satisfactory that the Department of Commerce and Labor naturally followed, and its organization met with nothing like the opposition nor the contemptuous questionings that were so common before the Department of Agriculture came into existence. Now the country is ready for further developments along this line of independent organization of national bureaus and departments for great national issues. President Taft, in a message some time ago referred to the advisability of the organization of a national bureau of health. He promised then to revert to this subject more in detail in a subsequent message. There seems no doubt at all that this organization would in ten years prove its worth quite as greatly as the Department of Agriculture and the Department of Commerce and Labor. Any improvement in the health of the nation is, of course, worth pricelessly more than even prosperity or the lack of friction between capital and labor. It cannot be measured in terms of material values in any adequate way. Professor Pease Norton, of the department of political economy at Yale, read before the American Association for the Advancement of Science an article on the "Economic Advisability of Inaugurating a National Department of Health," in which he stated some of the pecuniary results that would surely flow from the organization in a national form of the care for the public health.

Perhaps the most interesting and important phase of his presentation of the subject is his setting forth of the problem of health and disease in the crowded populations of the present day. He said:

"There are four great wastes today, the more lamentable because they are unnecessary. They are preventable death, preventable sickness, preventable condi-

tions of low physical and mental efficiency, and preventable ignorance. The magnitude of these wastes is testified to by experts competent to judge. They fall like the shades of night over the whole human race, blotting out its fairest years of happiness.

"The facts are cold and bare—1,500,000 persons must die in the United States during the next twelve months, equivalent to 4,200,000 persons will be constantly sick; over 5,000,000 homes, consisting of 25,000,000 persons, will be made more or less wretched by mortality and morbidity."

Surely this suffices to show how extremely important is the material for the new bureau so eminently desirable.

There are many bureaus at the present time in connection with the Government which would at once be properly absorbed into a national bureau or department of health, and which are at the present time more or less out of place in other departments. These are the Public Health and Marine Hospital Service, now in the Treasury Department, anomalously enough, but there because relations with the revenue service give it some standing there. There is the Bureau of Animal Industry, for the inspection of meat, now in the Department of Agriculture; the Bureau of the Census, which collects the vital statistics of the nation, and should, of course, be in the hands not alone of statistical but also of medical experts. Then there is the Bureau of Immigration, which has so much to do with health matters, and which we are coming to realize should have even more to do with them than it has at present. Finally, there is the Life Saving Service, now in the Treasury Department, but which needs medical supervision.

Professor Norton suggests that there should be in addition a National Bureau of Infant Hygiene, another of Education and Schools, a third of Sanitation, a fourth of Pure Food, and then that there should be a national Bureau of Registration for Physicians and Surgeans, of Drugs, Druggists and Drug Manufacturers, of Institutions of Public and Private Relief, Correction, Detention and Residence. Then there should be bureaus for the Prevention of Disease, one of Organic Diseases, another of Quarantine, a third of Health Information, and a fourth of Immigration. Finally, there should be as a co-ordinating bureau for all these a national Bureau of Research, with laboratories and equipment and with a staff for the gathering of statistics.

Of course, such a reorganization would be expensive, but it is from the economic side that most can be said in favor of the national Bureau or Department of Health. The outlook in agriculture was as nothing compared to the prospect of money advantage from improvement of the health of our people. Assuming Newholme's figures that there are nine days' average illness per annum for each person in the United States; this means that approximately 2,000,000 years of life are lost every year. Estimating the lost wages at a single dollar per day and the actual expenses of illness at another dollar, this item alone represents about $1,500,000,000. If this could be cut down one-third there would be a saving of $500,000,000. If it could be cut down one-tenth, and there is no doubt at all that this could be accomplished in the course of a few years by national organization of health interests, the saving would be $150,000,000 per year. It would be well worth spending one-fifth of this sum in producing such a saving.

There are many other phases of this economic benefit to be derived from a national Bureau of Health. Above all, by bringing about a lengthening of life it would lessen the burden of the unproductive years. The average span of life at the present time is under forty years. The unproductive years in all lives are about twenty. That is, one-half of life as at present lived is unproductive. Every year added to the average span of life would decrease this ratio of unproductivity. It would be rather easy to show that comparatively small decreases in this ratio would greatly increase the value of life even in mere monetary terms. Professor Norton shows that even more than a billion of dollars might thus be saved in a generation. Just the same sort of a reduction in the ratio of the expenses of death to the years of life is made by every lengthening of life.

Surely there is every reason in the world, then, why we should have a national Bureau or Department of Health, and the sooner the better for our health and strength and prosperity as a nation.

The Freight Rate Case

After the Eastern railroads had consented to make an increase of wages averaging about 6 per cent. and amounting to $45,000,000 a year, the Western roads gave notice to the Commission that they were about to increase rates on freight. In the West there has been no recent general increase of wages. The decision of an arbitration board last week gives higher pay to 27,000 engineers and firemen. It is asserted that the wage standard has been higher in the West than in the East. Western companies say that higher freight charges are needed because of the railroads' higher cost of living. There was a better warrant for this excuse in the East, owing to the recent general increase of wages, but there has been a higher cost of railway supplies thruout the country. Eastern roads permitted those of the West to take the initiative in raising freight rates, altho they have since given notice that their own charges are to be made higher. There was some evidence that the Western roads were acting in concert, by means of the Western Trunk Line Association. All their notices were filed at Washington by one and the same man. An association of shippers complained and urged Attorney-General Wickersham to intervene by asking for an injunction and by prosecuting the Western roads for violation of the Anti-Trust law. That is what he has done. The Eastern roads, each filing a notice for itself, have not yet been attacked in the courts.

The Government asks for a dissolution of the Western Trunk Line Association on the ground that it exists, and fixes uniform rates, in violation of the Sherman act. And yet President Taft has been saying that such use of an association by railroad companies, subject to the Commission's approval, should be distinctly authorized by law. In his message of January last he remarked that he saw no reason why freight rate agreements should not be permitted, subject to all the provisions of the railroad laws, if copies were promptly filed with the Commission. The Republican national platform says:

> "We believe that the Interstate Commerce law should be further amended so as to give railroads the right to make and publish traffic agreements, subject to the approval of the Commission."

Mr. Roosevelt, while he was President, repeatedly urged that such an exception to the requirements of the Sherman act should be made. The railroad bill recently introduced by Mr. Taft's Administration provided that freight agreements should not be unlawful under that statute. After this provision had been rejected by Congress, Mr. Taft said:

> "This was declared for in the platform, and recommended to Congress in two or three messages of President Roosevelt. The purpose was to legalize the practice which will prevail whether the law permits it or not. *No one suggests the wisdom of instituting prosecutions under the Anti-Trust law to prevent this practice.*"

By direction of Mr. Taft, however, such a prosecution has now been begun by the Attorney-General.

One explanation is that the President, seeing that Congress insists upon the enforcement of the Sherman act as it stands and as it has been interpreted by the courts, felt that it was his duty to bring this suit. It is not clear to us that the existence and operations of the Western Trunk Line Association have been unlawful under the Sherman act. Indeed, we understand this association has been regarded with favor by the Commission. But the roads, which must have been badly advised, even if they did not actually combine and conspire to make changes which the public would surely condemn, permitted their action to have all the outward signs of conspiracy.

It was not intended by those who framed the Sherman act that it should be applied to railroad traffic agreements. The law should be amended by the exclusion of them. They are needed for the proper transaction of railway business, and they should not be prohibited. But the terms of them should be made public, and the power to regulate and correct, in the interest of the people, should be given to a competent Commission. So far as they affect railroads, the

two laws, the Sherman act and the amended Interstate Commerce act, are virtually in conflict. Enforcement of the first against the association attacked in this case and others of the same kind must tend to cause confusion and that instability of rates which the authors of the railway laws desired to prevent.

The main question is whether the proposed increased rates are just and reasonable. There should be some way to reach promptly a decision on this point. We do not undertake to say that the railways have no fair warrant for increasing freight charges. It is true that, especially in the East, they have agreed to pay higher wages, and that the cost of their supplies has been rising. It is also true that several of them have recently increased their dividends. The needs of one road may not be like those of another. If we turn to increases of commuters' passenger rates in the vicinity of New York, we see them made by one company which in addition to large annual dividends has recently declared a special one of 50 per cent. in cash. In some cases there may be no more warrant for the proposed higher freight charges than there is for these higher rates which must be paid by New York business men whose homes are in suburban towns. In other cases, an addition to freight charges may be fairly required by the conditions. The question is one that should be considered apart from any alleged violation of the Sherman act and that should be settled in accordance with the facts as they are ascertained by a competent tribunal.

"Essential Doctrines"

At the late meeting of the Presbyterian General Assembly, the Presbytery of Baltimore asked for a renewed statement as to doubts and denials of certain doctrines; and the judicial commission to which the complaint against the Synod of New York was referred also asked for a similar doctrinal deliverance. Inasmuch as this judicial commission had let the synod off very easily, and had thereby offended the anxious discoverers of heresy, it seemed wise to relieve them by a fresh statement of the faith.

It was on the last day of the session, when two-thirds of the members had left for home, that the committee presented their report. There was no time for discussion; and without a word it was adopted by a rising vote, and it is said that only four members voted against it. It was sound, very sound; just such a report as Drs. Fox and Shearer wanted, and it pacified them.

The "deliverance" covered the following points: It was declared as an "essential doctrine" that the inspiration of the Scriptures was such as to keep the writers "free from error"; also that the virgin birth is an essential doctrine; further, that "Christ offered up himself a sacrifice to satisfy divine justice and reconcile us to God"; and again, that Christ rose from the dead and ascended into heaven "with the same body in which he suffered"; and, finally, that Christ worked real miracles, "not contrary to nature, but superior to it."

On this deliverance we may remark that if out of the General Assembly all but four men are ready to affirm all these as "essential doctrines," there must be an extraordinary unity of belief among them, or else they have the ability to accept and interpret terms in a sense not evident to those who follow the ordinary canons of interpretation. They say that inspiration kept the writers of Holy Scripture "free from error." That is a very large claim. Free from scientific error? from historical error? From old time even conservative theologians have allowed certain errors, because they had to.

Then passing the subject of the virgin birth, waiting only to ask the commissioners to the General Assembly—yes, and the Apostle Paul—what it is essential to, we come to that most discussed of all Christian doctrines, that of the atonement. "A sacrifice to satisfy divine justice," they say. Do all but four of the eight hundred commissioners accept that as their philosophy of the atonement? "Sacrifice" is one of a number of figures under which the New Testament represents Christ's death, but not as "to satisfy divine justice." There are many other views of the atonement that have been held in the Christian Church; but the Presbyterian Church would seem to have gone over to one

only. More than fifty years ago THE INDEPENDENT, then edited by Dr. Leonard Bacon, Dr. Joseph P. Thompson and Dr. Richard Salter Storrs, was defending the liberty of Dr. Bushnell against a charge of heresy for holding a quite different theory of the atonement, and one now much supported, outside of the Presbyterian Church.

But we do not consider this deliverance a very serious matter, not so serious as it sounds. It has no weight at the best. It would have no authority in a trial for heresy. It was a perfunctory utterance, gotten up to please and satisfy some souls who were trying to steady the ark; and it received, as we have said, no consideration. It binds nobody. It has about the authority of the frequent deliverances against tobacco, one of which, it is said, was adopted on a certain occasion while the Moderator and a distinguished Princeton professor were smoking in the anteroom.

The Delicate Task of College Discipline

WE fear that the New England college authorities that have undertaken to discipline those youths who took possession of railway trains, and tore up a graveyard or so, the other night, do not quite appreciate the delicacy of the position in which they have been placed.

Certainly it is not nice to see liberally educated young gentlemen turning their talents and accomplishments to trivial and somewhat annoying ends; but to breathe out threatenings against them, to withhold their diplomas, and to inform them that they can never again hold class suppers, is perhaps to permit irritation to get the better part of administrative discretion.

For who are these young offenders? Surely, college presidents do not mistake them for young persons consciously in need of enlightenment, or of moral upbringing. They are the younger representatives of our "better element." Their fathers and mothers had them to dispose of, and being themselves too busily employed in high finance or social activities to train their offspring at home, and undertsanding the value of the specialist in our modern social order, have sent an energetic progeny to college to form valuable acquaintances and to work off ebullient spirits where the "nerves" of the family will not be too directly strained in the process. Many of these patrons of our academic institutions are themselves alumni, and have been given to understand that their benefactions are always welcome to *Alma Mater*. The sons are not ignorant of these facts, and the leaders in such gayeties as those at Savin Rock and the Saybrook graveyard the other night are not infrequently young gentlemen who quite well know the esteem in which their fathers' bank accounts are held.

We do not wish to intimate that the presidents of our ever-to-be-respected universities are unaware of these elements in their problem. Apparently they have not in any instance made so crude a mistake as would have been the publication of the names of the students complained of, with details of their fathers' business and professional connections, or of their mothers' and sisters' social standing. Such a procedure might, of course, have been expected to have a deterrent effect upon graveyard rioting, but it could not be expected to promote good feeling all around or to loosen pursestrings that were strangely tangled with ambition and family respectability.

Colleges and universities have large and serious responsibilities to consider. They must make the academic life attractive to a philistine generation. They cannot afford to alienate well-meaning brokers, manufacturers, gentlemen of the bar, pulpit orators and bishops, just because these representative American citizens of solid worth in our communities have sons whose tastes run to the smashing of tombstones or the wrecking of all-night cafés, rather than to such elegant trifles as the reading of Aristotle or the writing of Latin verse. Allowance must be made, too, for the "strenuous" spirit of the present age. The modern American is not contemplative. He likes to "do" things—or persons—and to do them with a staccato effect. Surely it would be ill-natured and annoying to discriminate against the non-intellectual element in the American college population; and we are confident

that when our college presidents have viewed this affair in all lights, they will see that any unusual severity in dealing with the Savin Rock and Saybrook culprits would certainly be construed by the college-supporting public as such discrimination. Or, at least, it would not be understood in "the American home."

Naturally our sympathies go out to all college authorities that are endeavoring to keep student activities within decorous bounds while at the same time they are studying ways and means to enlarge endowments and beautify the campus. But they are, we think, equal to their task. We do not blame them for having in this one instance erred slightly on the side of severity, for we are sure that in the long run they will agree with us that the conservation of Connecticut tombstones and all-night resorts is not so important as the unfaltering extension of "the glad hand" of academic hospitality.

University Problems in Germany

The new university statistics in Germany emphasize as never before two problems that threaten to become chronic, namely, the phenomenal growth of Berlin, with its ambition of becoming a world-university, and to be for the higher education in Germany what Paris is for France; and, secondly, the dangers of a "learned proletariat," which Bismarck already feared. Berlin has now 9,242 matriculated students, an inrease in a single year of 1,201.

Particularly in South Germany, where the sentiment is voiced by the influential *Allgemeine Zeitung*, of Munich, the sentiment against Berlin, with its liberal appropriations by the Government and its exceptionally high salaries, that attract the leading young academic lights from all other parts, is becoming strong, on the ground that Berlin intends to crowd the other twenty universities of the Fatherland down to the secondary rank of merely provincial institutions.

The total enrollment of regular and matriculated students is now 52,407, as compared with 48,780 only one year ago; with 32,800 ten years ago; with 28,000 twenty years ago, and 20,000 thirty years ago. The increase has accordingly been phenomenally greater in proportion than has been the growth of population, and the supply of technically educated university graduates is now much greater than the demand of State and Church. Recently the National Medical Association published an earnest warning for young men not to study medicine, as this profession was more than overcrowded, and in law and secondary schools similar conditions prevail, the only field where this is not the case being that of Protestant theology. The Iron Chancellor in his day insisted that the Social Democratic ranks received their best recruits from the ranks of these discontented university men, for whom there was no room.

A single discordant note has been struck by Professor Lampbrecht, of the University of Leipsic, *facile princeps* among the historians in the academic circles of the Fatherland, who declares that the German universities are not any longer the leaders among their kind, and are being fast outstripped, especially by the superior financial backing and equipment of American universities. His Cassandra cry is being re-echoed, particularly in South Germany, on the ground that Germany is not willing to lend its ear to real progress in university matters, as is the case elsewhere.

Another source of some anxiety is the crowding of the women contingent, who are now admitted to all universities without exception, and this term numbers 1,856 in all, while the number twelve months ago was 1,108, and three years ago was only 254, altho hundreds of others were "hearers." Naturally, Berlin leads in this field, too, with an enrollment of 633, while no other university has as many as 200.

A Burritt Brotherhood House

The recent celebration of the centennial of the birth of Elihu Burritt, at New Britain, Conn., his old home, during the week of the Hartford Peace Congress, was a significant event. For a busy New England town to close its factories, shops, stores, banks and schools, to devote a day to commemorating a man who in the last century

led there a simple life, but had the vision, in our day at last being realized, of the actual brotherhood of nations and the organization of the world—and devoted his life to making this come true, is itself noteworthy. The commemoration revealed the cosmopolitan character of this energetic Connecticut city. Out of a population of perhaps 50,000 about 40,000 are what we call "foreigners"—that is, people who, or their fathers, did not arrive on American soil as soon as the fathers of some of the rest of us. The population of New Britain is of many races, and all were enthusiastically united to do honor to New Britain's famous son, whose distinction was that he was a great citizen of the world. The most fitting memorial of the illustrious cosmopolitan man in the cosmopolitan city would seem to be a Burritt Brotherhood House, which should perpetuate and extend among his brother men of every tongue which that learned blacksmith spoke, and more which he did not speak, the influence of the great ideas of international justice and brotherhood for which he stood. Here would be a Cosmopolitan Club for Elihu Burritt's cosmopolitan city. New Britain, which has already begun raising money for a memorial of some character, can be trusted to carry out such a plan, if she adopts it, in a practical and beautiful way. In the memorial hall of such a building should be a marble medallion of Burritt, with some noble word of his beneath it; and rightly ranged upon the walls should be the portraits of the great prophets of peace—Dante, Erasmus, Grotius, Penn, Kant, Cobden, Hugo, Channing, Sumner, Hale, and all the goodly company—who thru the centuries have worked as Burritt worked to make men know that above all nations is humanity. It is an inspiring vision which the talk at New Britain about a Burritt Brotherhood House awakes; and visions nowadays come true.

The Louisiana Decision

There is something startling, not to say shocking, in the explanation given for the decision of the Louisiana Supreme Court explaining that in the law against concubinage with negroes, the negro means a full-blooded African and not one of mixt blood. That decision may be right and it sounds reasonable that a distinction should be made between a negro and a person of color, but it is surprising to see that the law is no against concubinage generally, but against a certain sort. The court says:

> "That our legislation, which is the whole history of the State, has not deemed it expedient to impose the slightest inhibition or penalty upon concubinage, even with the pure blooded negro, and which continues to deem it inexpedient to impose the slightest restriction upon free illicit cohabitation with pure blooded negroes except in concubinage, should all of a sudden (conditions being unchanged) have awakened to the necessity of making concubinage even with persons barely exhibiting a trace of negro blood not only a crime and offense but a felony, is not a conclusion to be lightly jumped at."

So there may be allowed unlimited illicit relations with any negro or mulatto, but it is the more permanent relation of co cubinage that is objected to, and the Supreme Court thinks it strange that any law should forbid such a relation with light colored women, for it has been very common. And why, they doubtless consider, should any one object, inasmuch as the result is not to darken white blood, but only to whiten dark blood until the dark shall become quite eliminated. But what a moral condition is hereby exposed!

Whips and Scorpions

It almost takes one's breath away to observe the air of autocracy with which Archbishop William H. O'Connell rules the very important See of Boston. He has just issued a "decree," addressed to all Catholic societies in his diocese. First, every one of them must have a chaplain, and all these chaplains he himself will appoint. It is distinctly said that they cannot choose their own chaplains:

> "A chaplain will be named directly by the Archbishop. The election in any sense of a chaplain or spiritual director by the society itself will not hereafter be tolerated."

This chaplain must be a member of the governing board of officers, and he must be "in close touch with all the aims and purposes and methods of the society," and see that everything goes right. Again, no priest shall affiliate himself with any other than such a society without the written permission of the Arch-

bishop; and "no priest, whether of this diocese or any other, may hereafter attend meetings, deliver addresses or conferences or speeches to such organizations, without written permission from the Archbishop"; and any disobeying "render themselves liable to penalties." Even as to the Catholic societies no priest whatever is permitted to address them except by the invitation of the chaplain; and no money shall be raised by such societies for any ecclesiastical purpose without written approval by the Archbishop. We give this decree from its promulgation in the Archbishop's official journal. It is no fake document, gotten up to simulate absolute despotism, but is wholly genuine. Appointed, but uninvited, this William the Conqueror has come down from Portland to Boston, and takes the attitude of a dictator. If his subjects venture to recall the easy and very successful rule of his predecessor they at least cannot, like the frogs in the fable, blame themselves for having asked for the new king. One recalls the resentful remonstrance of an English barrister to an intolerant judge, that God Almighty would treat a black beetle with more courtesy.

The Egyptian Grand Mufti

A mufti is a Moslem lawyer. The Grand Mufti is the chief official exponent of Mohammedan law, the law of the Koran. The decision of the court which condemned to death the assassin of the Egyptian Premier, Butras Pasha, we have referred to elsewhere, but we did not there tell a fact which has a bearing on the fitness of Moslem Egypt for self-rule. The decision was referred to the Grand Mufti for his approval, merely as a matter of form, for it has no legal weight. He has been in the habit of withholding approval of capital sentences. In this case he pointed out, in the first place, that in the Koran the Prophet has nothing to say of revolvers; and therefore, apparently, one who kills another with a revolver is not guilty of an offense under Moslem law. Next, Butras Pasha was a Coptic Christian, and no true believer is to suffer capital punishment for killing a Christian. And, third, the relatives of Butras did not appear as prosecutors. Those who hold such views, and they prevail in Egypt, are hardly the people to be trusted to more than partial and tentative self-government where others than Moslems are to be protected. It is perfectly clear that the Young Turks hold no such views. They have lately put a number of Moslem Turks to death for murdering Christians about Adana.

Modernist Journals

There are no Modernist journals in this country. There are Modernists, but they do not think it worth while to talk. They leave the Church quietly, or they exercise their private liberty of thought and suffer nothing except as suspicion of them prevents their promotion. It is different in the Continent of Europe. There Modernism is a serious matter and is thought worth fighting for. In Naples, Italy, is published *Battaglie d'Oggi,* or *Today's Struggles.* It prints the formal act of suspension by the Cardinal Archbishop of Naples of every priest who subscribes or writes for it, and yet in three months only 5 out of 400 priests stopped the paper. In Geneva is just issued, at $2 a year, the *Revue Moderniste Internationale.* It demands freedom of theological research, the removal of economic questions from Church authority, and will attempt to show how the Churches may become spiritual guides of humanity. It declares that "thousands of priests would willingly leave the Church if only worthy labor were assured them." The first of its three papers is in French, and deals with conditions in Germany. It declares that Pius X dares not carry out his own orders because of the numbers of priests involved. In fact, only one bishop, Rothenberg, attempted to carry out the remedies to the letter. He argues that it is the aim of Modernism to make the Church democratic; while theology, he shows, must be wrested from priestly theologians, and the Church laicized, as Christ himself cleaned out the temples. The second paper is in Italian, and describes the "silent exodus" in Italy, and treats of innumerable priests, unknown to scientific work, and yet "saturated with the Christian ideal." The last article is in German, by Sicken-

berger, a leading Modernist, and treats of "Conscience and Authority." These articles are followed by four hitherto unpublished letters by Father Tyrrell.

It is well known that Alfred Austin is a Tory in politics. It will be suspected, we fear, that his short poem on the death of King Edward interjects a political purpose in its last line. When the King died the country was seeking to achieve a great constitutional reform making the rule of the people effective. The only way to make "factious clamors cease" is by yielding the reform, which is what the defenders of the Lords desire. The poem reads:

"THE TRUCE OF GOD.

"A KING'S BEQUEST.

"What darkness deep as Wintry gloom
O'ershadows joyous Spring?
In vain the vernal orchards bloom,
Vainly the woodlands sing.
Round Royal shroud
A mournful crowd
Is all now left of One, but yesterday a King.

"Thrones have there been of hateful fame,
Reared upon wanton war:
He we have lost still linked his name
With peace, at home, afar.
For peace He wrought,
His constant thought
Being how to shield his Realm against strife's baleful star.

"So let us now all seek to wrest
From fateful feuds release,
And, mindful of his wise bequest,
From factious clamors cease:
Treading the path He trod,
The sacred Truce of God,
The path that points and leads to patriotic Peace."

We are grateful to *The Engineering News* for a list of sixty-eight cities and seventeen different States which have adopted the Commission Plan, also called the Short Ballot Plan, of municipal government. Of these the first to adopt it was Galveston, after its memorable flood; but Des Moines, Ia., is quite as noted for having profited by its early acceptance. Among the principal of these cities are Chelsea, Gloucester and Haverhill, Mass., with Boston, which has adopted it in part; Charlotte, N. C.; Memphis, Tenn.; Cedar Rapids and Sioux City, Ia.; Kansas City, Leavenworth, Topeka and Wichita, Kan.; Sioux Falls, N. Dak.; Bismarck, S. Dak.; St. Joseph, Mo.; Austin, Dallas, Fort Worth, Houston and San Antonio, Tex.; Colorado Springs, Col.; Tacoma, Wash.; Berkeley and San Diego, Cal., and Boisé, Idaho. The plan drops all local councilmen or aldermen, and elects five men on a general ticket, who have all powers of government, but who are subject to "recall" and referendum. We hear no complaints of the system, which eliminates much pickings and stealings.

The British journals are finding time to be amused and amazed at the official admissions and omissions to the funeral ceremonies of the late King Edward. Can it be conceived that no invitation came to Prime Minister Asquith or to any other one of the members of the Cabinet? Equally the Lords were not invited as such, altho some got in on other claims. Thus Lord Rosebery was there as a Royal Archer, altho there are archers no longer; but the whole arrangement was after a precedent that has descended from a hoary past. Mr. Asquith was present, and so was ex-Premier Balfour, btu it was as private persons. It is also absurd that the King's body should have been borne on a gun carriage, the man whose life was devoted to peace. But precedent conquers good sense.

There is weeping and wailing over the new Budget in the British whisky and tobacco business, for under the increased taxation the returns for eleven months show a great reduction in the consumption. The editor of *The Cigar and Tobacco World* complains that the consumption of tobacco has been reduced by 6,237,743 pounds, and this he calls "irreparable injury." If tobacco is "to be taxed to the vanishing point national bankruptcy will become inevitable." We think the country can stand it, and that the people will be the richer, healthier and better for the abstention. The woes of the trade will evoke little sympathy.

An Italian priest in the diocese of Trenton, N. J., got so deeply in love with a girl with whom his duties brought him into ecclesiastical relations that he broke his vows and married her last week. That is not to his discredit. He has done nothing shameful. He has followed the white law of nature. He is not to be abused as unworthy, altho he has by the act excommunicated himself. To marry is honest; to break the vow of celibacy by marriage is not reprehensible. What would be reprehensible would be to break the vow of continence while remaining a celibate priest.

It was by no intention of the parents that the new King of England was a George. Their eldest son was an Edward, but he died some years ago, and the "Sailor Prince" became heir to the throne. Doubtless Thackeray's lectures on the Four Georges (1855) and the rhyme which lampoons them has had its influence:

"Vile King George the First was reckoned;
Viler still was George the Second;
And what mortal ever heard
Any good of George the Third?
When the Fourth to Hell descended,
Heaven be thanked the Georges ended."

There is every reason to believe that such a line of Georges is ended, and that, thru William IV, Victoria and Edward, a new heredity is assured.

It is a fact that yellow fever has ceased to be an endemic disease in Jamaica, and chiefly thru the introduction of water works, carrying water in pipes, and making open drains and stagnant waters unnecessary. With this has come a police system that makes it an offense to have stagnant pools, and the result is that yellow fever is no more feared than in New York. Now they are at work abolishing malaria, which is due to another kind of mosquito.

We do not understand why college ruffians, such as that crowd of sophomores of Wesleyan University whose robberies are reported in the papers, are usually let off so easily. They ought to be more severely dealt with by the courts than ordinary offenders. It was to please the silly fancies of such as they that the trustees closed the doors to young women. Really, it would have been better to shut out the young men who have no respect for the honor of their college nor for the laws of the Commonwealth, and given the institution over to the women, who have no college in the State, while the men have three.

The neglect of the committee in charge of the great Sunday School convention in Washington to provide for any part or place in it for the negro Sunday schools has left behind it no little indignation, not to say resentment. To be sure, when the feeling began to express itself the convention, at the motion of a Kentucky member, made Dr. Booker T. Washington a life member, and that was pleasant, but it did not atone for the wrong. It was simply a palliative. The first neglect was a most serious offense.

Jack Johnson, pugilist, who claims to be the world's champion heavyweight fighter, is a disgrace to the negro people. His profession is a disgrace, and he has been arrested time after time of late for speeding and for assault. We do not like to see negro journals boasting of him as if his brutality were an honor to the race.

The Supreme Court of Nebraska has put in a glaring light the inconsistency of refusing women the right of suffrage. It has decided that a woman may hold any office in the gift of the people, but she cannot vote for a justice of the peace. Let Nebraska learn from Colorado.

It would please us very much to see the proposed professorship of philosophy to bear the name of Borden P. Bowne established in Boston University, where he was for over thirty years the teacher of a succession of Methodist preachers and teachers, and by his books of the country at large.

INSURANCE

What Kind of Policy Should Be Issued on My Life?

THE intelligent man who wishes to insure his life and has decided upon the company in which to take out a policy, and between participating and non-participating insurance (see THE INDEPENDENT, vol. lxiv, page 119), should ask himself the following questions:

(1) How long shall I pay premiums?

This depends so much upon the financial circumstances of the case that it is impossible to give a general answer, but in any case it is advisable to have the payments completed between the ages of sixty and sixty-five years. Twenty appears to be the most popular number of payments, but it would always be possible to obtain a rate which would be very little more than the whole life premium by increasing the number of payments subject to the above condition.

(2) Is the sum insured to be paid at my death only, or is it to be paid at my death if within a certain period, or at the end of the period if I am then alive?

This depends upon whether the policy is intended purely as protection for wife or family, or whether, by paying a larger premium, thus introducing an investment element, the insured wishes, in case of survival to the end of the endowment period, to have for his own use the sum resulting from these excess payments. If the policy matures as an endowment, protection ceases unless the sum assured is wisely invested, so that it remains intact at the death of the insured. The investment element increases with the shortening of the endowment period, and comparisons should be made with the probable result of investing the excess premiums in securities of the insured's own choice.

(3) In case of my death, to whom is the sum insured to be paid?

This depends upon whether there is any one dependent upon the person contemplating insurance, and whether, in case of death, the policy is intended to form part of the estate of the insured or not. If a beneficiary is named in the policy, and the insured reserves the right to change the beneficiary at will, there is the uncertainty as to whether the policy would not become the property of the creditors in case of bankruptcy, and this may be taken to outweigh the advantage of having the sum insured payable directly to the beneficiary on the death of the insured. This uncertainty does not apply to the case where the right to change the beneficiary is not reserved.

(4) Is the payment of the amount insured to be made in one sum, or in instalments, or as an annuity?

In answering this question, one must consider that the companies have to protect themselves against a possible fall in the rate of interest by calculating the amount of the instalments on a very conservative basis, while the beneficiary does not participate in any profit that arises from the rate of interest earned by the company being greater than that assumed in the calculations, nor in any loss consequent upon it being less. Furthermore, if the beneficiary is still alive when the last instalment has been paid, there is the hardship due to the sudden stoppage of what may have come to be considered a constant source of income. This latter is best avoided by means of what is called a continuous annuity certain, where a smaller payment is made, but the payments are continued beyond the end of the fixed period during the lifetime of the beneficiary. Instead of either of these methods of payment, the insured, during his lifetime, or the beneficiary, after the death of the insured, may generally elect to purchase with the sum insured an annuity for life. As the choice of any of these options can be delayed until the last moment, comparison can be made between the annual payment offered under the policy and what would be paid by the company offering the best terms to the beneficiary when the policy becomes a claim. It must always be remembered that where an annuity is purchased a portion of the capital is treated as income each year, but there is no objection to this course if the benefit is to cease with the death of the beneficiary.

We have attempted to show briefly some of the various questions that have to be met before deciding upon the form of policy to be issued on one's life, and shall be pleased to answer any special inquiries made by our subscribers.

FINANCIAL

A Declining Stock Market

FOLLOWING the announcement, on the 31st ult., of the Government's action with respect to the projected increase of freight rates in the West, and of the Supreme Court's decision in support of the Commission's reduction of rates between Mississippi and Missouri points, the stock market sharply declined. Thruout the remainder of the week the movement was, on the whole, downward. On Friday, nearly 1,500,000 shares were sold, and the week's total was 4,913,000, against only 2,033,000 in the week preceding. The lowest figures, closing prices and losses, of the most active securities are shown below:

	Low.	Close.	Loss.
Amalg. Copper	62⅜	64	— 5¾
Am. Smelting	72¼	73¾	— 5⅛
Atchison	101¼	102½	— 6⅞
Balt. & Ohio	109⅛	111	— 3
Bklyn R. T.	76	77	— 4
Canad. Pac.	192½	194¼	— 3¼
St. Paul	125	126¼	—12¾
Consol. Gas	130½	132¼	— 9
Gt. North. pref.	127	127¾	— 7
Lou. & Nash.	139½	141¾	— 6¼
Mo. Pac.	64½	65	— 6
N. Y. Central	111⅞	114¼	— 5½
North. Pac.	122	123	— 8⅜
Pennsylvania	129	129⅞	— 4½
Reading	148⅞	151¼	— 9⅞
South. Pac.	116¾	118¼	— 8¼
Union Pac.	165¾	168¼	—12⅝
U. S. Steel	75½	76⅝	— 6

Nearly one-fourth of the week's business was done in Steel common shares. Steel, Reading, Union Pacific, Amalgamated Copper and Southern Pacific furnished two-thirds of the total. At the end of the week there were signs of buying for investment by persons who were not greatly moved by the gloomy predictions of certain railroad officers. Events of the week, except the Government's action concerning rates, were of a favorable character, but they had no effect upon the market, which, as the transactions showed, was controlled by powerful capitalist speculators.

The Corporation Tax Law

THE new tax upon the net earnings of corporations, amounting to about $27,000,000 and due this month, will be collected, but the Government will not know until November or December next whether the law is to be sustained or rejected by the Supreme Court. There are seven Justices on the bench. In all probability four are on one side of this case and three on the other. As the importance of the questions involved is not measured by the size of the tax, the decision should be made by at least five Justices, a majority of the full court. It may be that the scale will be turned one way or the other by the vote of Governor Hughes. Some think his exprest opinions concerning an income tax indicate that his vote will be cast against the tax law. Arguments are to be made once more at some date, not yet named, after October 10. It is unfortunate that final action concerning this statute and also the suits against the Standard Oil and Tobacco Trusts must be so long delayed, but no decision in any of these cases should be announced that is not supported by a clear majority of all the nine Justices.

....The Singer Manufacturing Company, which has recently been paying quarterly dividends of 10 per cent., will double its present capital of $30,000,000 and declare a stock dividend of 100 per cent.

....The Government's cotton crop report, first for this year, shows that the condition at the end of May was 82 (against a ten years average of 80.9) and the planted area exceeds that of last year by 904,000 acres, or nearly 3 per cent.

....The officers of the Fidelity Trust Company may justly regard with much satisfaction the growth of that institution since it began business, only three years ago, and its present strength. It is plain that they have enjoyed the confidence of the varied commercial interests which the company serves, and which have been glad to support their careful and conservative methods. The Fidelity's capital is $750,000, its surplus is $750,000, its undivided profits exceed $200,000, and its total resources are $8,815,000. The president is Samuel S. Conover.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JUNE 16, 1910 No. 3211

Survey of the World

Railroad Freight Rate Agreement

After the Government had obtained a temporary injunction restraining twenty-four Western railroad companies from increasing their freight rates, and had brought suit against the Western Trunk Line Committee for violation of the Anti-Trust law, arrangements were made for a conference at the White House between the President and representatives of the roads. There were indications in the remarks of several railroad officers that the companies would agree to submit the proposed higher rates to the judgment of the Commission. It was pointed out by Commissioner Lane that under existing law the Commission could not suspend the rates, altho in all probability the law soon to be enacted would empower it to do so. But the companies could suspend them and await the enactment of the pending bill. On the 6th the conference took place. The railroad officers present were President Ripley, of the Atchison; President Delano, of the Wabash; President Felton, of the Chicago Great Western, and Walter D. Hines, acting chairman of the Atchison's executive committee. These had been chosen to represent the twenty-four companies that were defendants in the Government's suit. With President Taft were Attorney-General Wickersham, Secretary Knox, Secretary Nagel and Interstate Commerce Commissioners Knapp and Lane. The conference consumed five hours. At the end of it President Taft announced that an agreement had been reached. The rate increases were to be withdrawn or deferred for submission to the Commission under the new law, and the Government would withdraw its suit. The following accounts have been published:

"The President stated at the outset that the purpose of the suit was to prevent the proposed rate increases (which, under the existing law, could not be investigated at all until after they had become effective) so as to preserve the status until the new statute could be passed and the Commission should have the power to investigate rate advances as soon as announced and before becoming effective.

"He stated further that he thought the railroad companies must withdraw the tariffs enjoined and all other tariffs filed by them effective on or after June 1, 1910, and that none of them ought to file any new tariffs involving rate advances until the new law should be passed, assuming that it would be passed at the present session of Congress.

"After conference the railroad companies announced that they would adopt the view expressed by the President, and thereupon the President stated that if they did so his purpose in bringing the suit would be accomplished, and, such result being accomplished, he saw no occasion for pressing the suit and the same would be withdrawn."

On the following day there was another conference. President Taft had invited President Brown, of the New York Central; President McCrea, of the Pennsylvania; Judge Massey, general counsel, and President Finley, of the Southern, to discuss with him the rate increases proposed by Eastern roads, to take effect early in July. At the close of this conference he gave to the public the following statement:

"It was agreed that if the amendment recommended in the message of the President this morning to the pending Railroad bill was adopted, and if the bill became a law on or before July 1st, no agreement was necessary to bring the rates in question before the Interstate Commerce Commission for investigation and decision before they became effective. But it was further agreed that if the enactment of the Railroad law was deferred, or it should otherwise become necessary, the railroad companies would submit the proposed advance in rates to the Interstate Commerce Commission in accordance with the provisions of the new law. Mr. Finley, the President of the Southern Railway, stated that as to Southern territory, his company, while

recognizing the necessity for some increase in some of the rates, had taken no action as yet, so that there was no need of any stipulation by his company."

In the special message to which reference was made in this statement, the President, after speaking of the agreement reached at the first conference, recommended that Congress amend the pending bill by providing that the Commission be empowered to take up and investigate proposed new rates at once. In the bill, the Commission was not to have this power until sixty days after the enactment of the new law. On the 9th, the Eastern roads, at a conference with members of the Commission, decided that the advanced rates should be filed as effective on August 1, and that there should be a further postponement if the pending bill should not be a law on that date. It is said that the investigation will consume several months and that the Commission will not be able to begin it before September. Prominent railroad officers assert that the entire proposed increase will not be enough to compensate for the increase of wages. The latter increase in most cases in the East was made retroactive, to be effective on and since April 1. Some think the Commission will grant about half of the proposed addition to the rates. President Felton says he has faith in the Commission's wisdom and fairness, and is confident that the higher rates will be approved. Passenger rates were not considered at the White House conferences and are not affected by the agreement.

The Postal Savings Bank Bill

In the House, on the 9th, the Postal Savings Bank bill was passed by a vote of 195 to 101. No Republican was counted in the negative, and 24 Democrats joined the Republicans in the affirmative. From the committee there had been two minority reports. In one of these Mr. Moon, of Tennessee, opposed all projects for a postal bank, asserting that they were unconstitutional and unwise. In the other support was given to a Democratic bill which provided that all the deposited money should be covered into the Treasury as a loan, and that then 95 per cent. of it should be deposited in banks near the receiving post offices. The bill passed creates a board of trustees composed of the Postmaster-General, the Secretary of the Treasury and the Attorney-General. They are to select the post offices at which deposits may be received. Deposits from one person must not exceed $100 a month or $500 in all. An account may be opened with one dollar. Interest will be paid at the rate of 2 per cent. Depositors may exchange their deposited money for Government bonds paying 2½ per cent., to be issued in denominations of $20, $40, $60, $80, $100 and $500. The post offices are to deposit the money in national and state banks of the vicinity, and these are to pay 2¼ per cent. for the use of it. Five per cent. of the deposits must be held by the Secretary of the Treasury as a cash reserve; not more than 30 per cent. may be withdrawn by the Government, at the direction of the President, for investment in Government bonds; the remaining 65 per cent. goes to the local banks, which must give as security "public bonds or other securities supported by the taxing power." The bill passed some time ago in the Senate forbids the investment of deposits in Government bonds bearing interest at less than 2¼ per cent., and would prevent investment in the existing 2 per cent. bonds, which was desired by the President. At the end of last week the Senate leaders decided to move for acceptance of this House bill without amendment, hoping thus to avoid a conference and to hasten the enactment of the law. There were indications that the motion would have the support of a majority.

Sugar Trust Men Convicted

Charles R. Heike, secretary of the American Sugar Refining Company, or Sugar Trust, and Ernest W. Gerbracht, superintendent of the Trust's largest refinery, at the close of a long trial in New York, last week, were found guilty of conspiring to defraud the Government by falsifying the weight of imported dutiable sugar. It was at this trial that Oliver Spitzer, formerly dock superintendent at the refinery in question, confest that he had invented the device by which the weights were affected. Heike, convicted on one count

of the indictment, may be sent to prison for two years and required to pay a fine of $10,000. The highest penalty provided by the law in the case of Gerbracht, who was convicted on six counts, is imprisonment for twelve years and a fine of $30,000. The two men will not be sentenced until August. In the case of James F. Bendernagel, formerly cashier of the Trust, the jury disagreed. This was his second trial, and there was a disagreement at his first one. Halligan and Walker, two employees of lower grade, who had assisted in cheating the Government, and who pleaded guilty after hearing Spitzer's confession, were sent to jail for three months. The prosecutor said they had been victims of a system. He added that they had helped him by their confessions. The arguments of Heike's and Gerbracht's counsel warranted the inference that they desired to place responsibility for the frauds upon the late H. O. Havemeyer, who was president of the Trust. In the last days of the trial the prosecutor, Special Assistant Attorney-General Stimson, said he had proof that frauds had been committed repeatedly at the refinery in question since the indictment of these defendants.——It is reported that Richard Parr, the Government agent or detective who discovered the concealed springs by which the weights were falsified, will receive $200,000 from the Treasury Department as his share, under the law, of the sum recovered (nearly $3,000,000) from the Trust.

Cases of Bribery and Fraud

The officers who are prosecuting members of the Illinois Legislature for taking or paying bribes in connection with the election of United States Senator Lorimer have received many offers of information and aid from persons who have knowledge of corrupt work during the recent session. Another confession has been made, but it differs from those already reported. There has been inquiry concerning contributions to a fund to be used in smothering a bill imposing license fees upon fish dealers. It was understood that a large sum was collected and paid into what was called "the jackpot," a corruption fund distributed at the end of the session. Senator Holstslaw, Representative White and other confessing members admit that they received parts of this fund. F. J. Traut now says that the money collected, several thousand dollars, was intrusted to him for transmission to "the jackpot," and that he retained it for his own use. Traut is the manager of a construction company controlled by Senator Lorimer.——The Illinois Central Railroad Company has sued four men who recently held prominent positions in its service, alleging that by them it has been defrauded of $2,000,000 during the last four years. One of the defendants is O. S. Keith, formerly superintendent of transportation. The company says that they conspired with certain car and equipment companies to commit the frauds by means of overcharges and in other ways.

An Aviator's Flight

Charles K. Hamilton, on the 13th inst., flew in his biplane from New York to Philadelphia, and then, after resting about two hours, undertook to return. As he approached New York, the failure of his engine compelled him to alight in the marshes near South Amboy, N. J. Starting from Governor's Island, in New York harbor, at 7.35 a. m., he arrived at Philadelphia one hour and fifty-three minutes later, having covered the 86 miles at an average speed of about 46 miles an hour. From South Elizabeth, N. J., he was accompanied by a special train on the Pennsylvania road. Before alighting at a chosen point in a field four miles from the Philadelphia City Hall, he circled the field three times to exhibit his control of the biplane. He began his return flight at 11.30 a. m., and had been in the air 88 minutes when the condition of his engine forced him to stop. Hamilton is twenty-nine years old and a native of New Britain, Conn.

The Islands

As required by a recent amendment to the Amnesty act of 1909, the courts in Cuba are releasing many prisoners. In Havana last week 100 were set free. The cases of General Estenoz and other negroes awaiting trial for conspiracy against the Government are not affected by the law.——The Cuban Congress has

increased the salary of a Senator or a Representative from $300 to $400 a month. As an increase of this salary is forbidden by the Constitution, the addition is made "for expenses."——John J. Jenkins, of Wisconsin, the new judge of the Federal Court in Porto Rico, has appointed four young women, as follows, to hold offices in the courts there: Miss Louise Cosgriff, court reporter, salary, $2,000; Miss Nellie Colburn, deputy clerk of court at San Juan, $1,500; Miss Lulu Gross, deputy clerk at Ponce, $1,200; Miss Mary Nimmons, deputy clerk at Mayaguez, $1,200. He received 350 applications for these and other places under his control.——Graham L. Rice, Commissioner of Immigration at Porto Rico, says that about 5,000 immigrants were received during the past year. A majority of these came from Spain, but there were also many from France and Venezuela.——A report made by Charles H. Sleeper, Director of Lands in the Philippines, and sent to Congress by the War Department, gives the names of persons who have bought or leased land in the friars' estates. Frank W. Carpenter, executive secretary of the Commission, has 5,000 acres at a monthly rental of 8 cents an acre. To E. L. Worcester, nephew of Commissioner Worcester, 3,000 acres have been leased for twenty-five years, but this is not friar land. Officers of the Government at Washington say that there is nothing unusual or improper in these leases, as the land was unoccupied and was not wanted by other persons.

Countries South of Us

In Nicaragua, Estrada has again proposed to Madriz that the friendly mediation of the United States be sought. He would have the United States appoint a provisional President and provide for an election, with the understanding that the new Government should recognize the revolutionist debt and give pensions to soldiers of each faction. When the Madriz officer holding the Bluff near Bluefields gave notice last week that he would stop by force any vessel trying to enter the harbor, Commander Hines, of the United States gunboat "Dubuque," sent to him the following message: "At the first shot fired at the American flag or an American vessel, I will level the Bluff." Pittman, the young adventurer from Boston, who was captured, is a prisoner at the Bluff, where he is well treated. The condition of business and agriculture in Nicaragua is deplorable. Exchange has so risen that $12 in currency are required to buy $1 in gold. Revolutionary uprisings in the West are reported. A town near Granada was captured by insurgents last week. They were dislodged after eight hours of fighting.

Roosevelt's Tour Ended

Ex-President Roosevelt will reach New York at the end of this week after a triumphal progress thru Europe, such as has hardly been paralleled at any previous time. In England the period of mourning for the death of King Edward has given a more quiet tone to his reception there, but his reception has been no less enthusiastic. Since his Guildhall speech on the Egyptian situation he has received many private and personal invitations, but the only occasion of great public interest was his receiving on June 7 the degree of Doctor of Civil Law at Oxford, followed by his delivery of the Romanes lecture on "Analogies Between Biological Change and the Course of History." Lord Curzon presided as Chancellor, and it was a most formal occasion, enlivened only by the semi-humorous Latin address of the Chancellor. As he stood before Lord Curzon the latter addressed him, "*Strenuissime,*" at which the whole body of undergraduates in the gallery shouted with laughter. Three Latin hexameters with which he was introduced have been thus translated:

"Behold, Vice Chancellor, the promised wight
Before whose coming cruelty turned to flight
And all the startled mouths of sevenfold Nile
took flight."

His reception by the students and the audience was most cordial. His lecture absolutely avoided all political bearings, and was devoted to the discussion of the causes of national decay or progress, with a striking comparison with the effect on the South American fauna of the uplifting of the continent so that South America was no longer an island, and the predacious animals of North Amer-

ica were able to go South thru the Isthmus. He did not fail to treat of the danger that might come in an effeminate development of civilization by the failure to have children. His address was rich in historical and biological interest and has been much appreciated. Meanwhile criticisms of his Guildhall address have been made, and the committee of the International Arbitration and Peace Association has adopted a resolution regretting that Colonel Roosevelt in his Guildhall speech created a dangerous precedent in dealing with delicate questions of politics. It protests against his encouragement of violence in the suppression of national feeling and self-development in Egypt. Before sailing for New York with his party on the "Kaiserin Auguste Victoria" he spent a day and a night with Sir Edward Grey, Minister of Foreign Affairs, the time devoted, it is said, to tramping the woods and listening to the songs of English birds. He also was interested in meeting Mr. Plunkett and hearing from him an account of the good progress of Irish holdings.

Franz Josef in Bosnia

We are now having reports of the results of the visit of Emperor Franz Josef, of Austria, to his newly incorporated Province of Bosnia-Herzegovina. The Emperor is personally loved even by those who do not love Austrian domination, and he is now eighty years old. Notwithstanding his age he was anxious to visit his new provinces and assure the people that they should be benevolently governed. When in 1906 the heir to the throne visited Trebinje, the capital of Herzegovina was gaily decorated, but the atmosphere was frigid. The people were fearing the annexation, which came in October of 1909. The conditions are different now. To be sure, the taxes are heavy, and there is dissatisfaction, but the annexation is an accomplished fact of which the people must make the best, and it is hoped that the opening of the Legislative Assembly will inaugurate an era of freedom. It was no small task for the Emperor to make the long journey at his age, but he stood the strain well, and the attitude of the people was respectful and fairly cordial, altho it is not easy to judge accurately under conditions in which the officials everywhere were under obligation to create all the apparent enthusiasm possible. On the whole, the political effect seems to have been good, and a better period is promised for Bosnia and Herzegovina. The monarch was attended by a distinguished suite, including the Austrian and Hungarian Premiers, and the joint Ministers for Foreign Affairs, War and Finance, the last named of whom is the chief administrator of the two provinces. He received the homage of the ecclesiastical heads of the three great sections, Orthodox, Catholic and Mussulman, into which the population is divided, and associated with them were the representatives of the Protestant and Jewish communities. He was welcomed in the name of the municipality by the Mussulman Burgomaster and the Orthodox and Catholic Vice-Burgomasters, and the reception given by the unofficial population to their venerable ruler seemed both hearty and spontaneous, particularly that by the Mussulmans.

The Finns and the Jews

By a vote of 164 to 23 the Russian Duma has passed the bill giving the Duma authority over all the acts of the Finnish Diet. The measure has provoked intense feeling in Finland, but on its passage the Russian Nationalists applauded vigorously. The president of reactionary League of the Archangel Michael rose to his feet and shouted, "The end of Finland."——The expulsion of Jews from districts outside of the Pale has gone on with extreme severity in Kieff and the Province of Smolensk. Thousands have been driven out and the police have made a house to house search for Jews. The Government claims that no new laws have been enacted, but only the old laws enforced.——Oscar Hammerstein, the operatic manager, has had the experience of being denied admission to Russia on the ground that he is a Jew, altho the real reason may have been that the Government did not wish him to draw any Russian opera singers to America. He had a letter of introduction from Senator Root to a Russian Minister. He says he can't help being a Jew, and that the Government should rather have met him with a special guard of honor.

The Far East

The outbreaks in the Chinese Province of Hunan seem to have quieted down, and we hear nothing further following the anonymous warnings from the revolutionists announcing that a day had been set for beginning hostilities. The Nanking Exposition opened with no disturbance.——The Chinese Senate, or Imperial Assembly, provided for under the new Constitution, is called to hold its inaugural meeting October 3. The members, ninety-one in all, are appointed by the Throne. They are drawn from six different classes. Of these princes and nobles of the Imperial clans supply 14 members, the Manchu and Chinese nobility 12, the princes and nobles of dependencies outside the eighteen provinces 17, the Imperial clansmen other than the classes already mentioned 6, officials of ministries and offices 32, and eminent scholars 10. Apart from the seventeen princes and nobles of dependencies, we find on the list thirty-nine Manchu names and thirty-five Chinese. But these figures do not accurately represent the balance of power in favor of the Manchus, in that the bulk of the Chinese representatives are drawn from the ranks of officials and scholars, and can scarcely be expected to exercise the same influence in the counsels of the Assembly as the princes, nobles and gentry of the Imperial clans. The decree contains the following exhortation:

"The members should understand that this assemblage of the Senate is an unprecedented undertaking in China, and will be the forerunner of the creation of a Parliament. They are earnestly desired to devote to it their patriotism and sincerity, to observe proper order, and to fulfil their duties in representing public opinion. Thus it is hoped that our sincere wish to effect constitutional reforms in their proper order and to aim at success may be duly satisfied."

That "proper order," as outlined in August, 1908, seems to be coming along fairly well. The Provincial Assemblies, and now the Senate, are on time, followed by decrees for the reform of the judiciary and the schemes for the institution of local government in prefections and departments. Already the Provincial Assemblies have taken themselves far more seriously than the Government wished or seems to have expected. It was the Nanking Provincial Assembly which a few months ago called attention to the Shanghai Taotai's use of the Huangpu Conservancy funds to buy up native newspapers in Shanghai, and thus contributed to getting that kind of abuse stopped. Other examples of energy by the Provincial Assemblies might be quoted, and the new Senate may yet prove equally active.——We have seen no confirmation of the reported treaty, or understanding, between Japan and Russia which is published in some journals, and which is of importance to the United States if true. As reported both Powers agree to undertake no step in advance in connection with China except by mutual agreement. Next, that Russia's policy in the East shall not be such as to endanger Japan's peculiar friendship with the United States, and that all questions between the two Powers are to be referred to the United States for counsel. It is added that Japan favors the extension of Western commerce in the East and cannot favor a Russian policy that foreign loans in China for commercial or industrial purposes are undesirable. Both Powers assert that they do not desire to remain permanently in Manchuria. Neither Power objects to proposed constitutional reforms in China. Further, if Japan concludes to sell her share in the Manchurian Railway, Russia will consent. The far-reaching character of these provisions awakens serious distrust of the truthfulness of the report.——It is announced that the Chinese Government has issued a decree making English the official language for scientific and technical education. English is by far the most widely used foreign language, and has long been the medium for trading transactions with foreigners. It has been used in mission schools, and English books have been the medium for the introduction of foreign ideas.——A sensation was caused in Japan by the discovery of a box deposited with a missionary priest at Seoul by a nephew of the ex-Emperor, containing originals of treaties between Korea and Japan and other Powers reported to the late Prince Ito as lost. The original seal of Korea, which was said to have been lost, was found in the box. The ex-Emperor's

nephew was arrested by the Japanese authorities.——A British expedition to the great Snow Mountains of Dutch New Guinea has discovered a race of pigmies averaging 51 inches in hight, belonging to the Negrito race. It had not been supposed that any such race existed there, but their presence explains some anomalous characteristics of the races in the Lesser Sunda Islands. These pigmies are now known to exist from Central Africa to the islands east of Asia, and are supposed to represent an aboriginal people which have survived only in the more inaccessible regions. A special center of dispersion for them seems to have been in the Malay Archipelago, and they are found not only in New Guinea, but also in Malacca, the Andaman Islands and in the Philippines. The discovery in Java of the *Pithecanthropus Erectus* adds to the interest of the pigmy problem. It is in Borneo that the orang-utan is found.

Various Items

The Spanish Government, under Prime Minister Canalejas, is attempting to enforce strictly the legislation affecting religious congregations, which is in line with that of France. The Prime Minister declares that these laws must be enforced at all costs, and that congregations which have not given notice of the number of their members and the condition of their finances are to be regarded as illegal and dealt with accordingly.——An immense step in religious toleration impends in Spain by the announcement that the Government intends to proclaim the abrogation of all decrees forbidding the public services of non-Catholic religious bodies. The announcement of the intention has caused great excitement and considerable opposition. Premier Canalejas found King Alfonso in sympathy with the proposal. ——The Spanish internal loan of $2,000,000 has been oversubscribed forty-three times.——Recently the Cardinal of Lyons, who is also Patriarch of Gaul, has been in Rome. It seems that he has seen the Curia on the part of the French Government and the French episcopate, in the hope of winning over Rome to accept some sort of truce with the powers that be in France. Prime Minister Briand, so it appears, is willing to come to terms with the episcopate and recognize the Catholic schools, known as free schools, provided the Government may have a limited supervision over text-books and also provided Rome consents that the Government and the episcopate arrange matters in dispute without recourse to Rome. There seems to be no question of money grants of any kind for churches or schools. The Vatican naturally balks at this last. Both the Vatican and the episcopate seem to have learned a lesson from the severe defeat of their candidates at the late elections. Well-known royalists, like Denis Cochin, proclaimed themselves loyal to the republic. Not one candidate announced himself solely as a royalist. Every candidate was a republican of one sort or another.——By a vote of 7,413 to 1,036 the canton of Basel decided upon a complete separation of Church and State. Only about one-half of the voters went to the polls. The churches retain the possession of their property and are authorized to tax their members for support of the services. The State withdraws all support for church purposes except the payment of clergymen for State hospitals and prisons. Pensions now in force in the case of retired pastors will be continued by the State. The only church not entirely satisfied with this innovation are the Roman Catholics, but these constitute a small minority in the canton. The new law goes into effect April, 1911.——The wealthy Hebrew, Bernhard Dernburg, resigned his position as Secretary of State for the German Colonies. He was greatly displeased that the Reichstag, against his advice, taxed for war contributions companies developing the African colonies. His successor is Dr. Friedrich von Lindequist, who was in 1905 Governor of Southwest Africa. ——The Egyptian final court of appeals has dismissed the appeal of Wardini, the Nationalist who murdered Butros Pasha, the Prime Minister, who is under sentence of death, a sentence which the Grand Mufti refused to confirm under Moslem law. Unless pardoned by the Khedive, which is not likely, he will be executed.

Neutralize the Panama Canal

BY DAVID J. FOSTER, M.C.

[The following article by the distinguished Chairman of the Committee on Foreign Affairs of the House of Representatives is of much timeliness and importance. A bill is already before the House to neutralize the canal, and, as preparations are already being made for an exposition either at New Orleans or San Francisco in celebration of the opening of the canal, the country will soon have to decide what it will do. It is needless to say that THE INDEPENDENT is in entire sympathy with Mr. Foster's article. It would be almost a crime against civilization in these days of Hague courts and conferences to spend millions in fortifying the canal.—EDITOR.]

THE approaching completion of the Panama Canal entails upon American diplomacy new problems of deep and far reaching significance. We are placing upon future generations the cost of the construction of the canal, which will probably amount to $500,000,000. While the canal will be a monument to our constructive genius and of peculiar importance to us from every standpoint it is nevertheless a world enterprise in which all the nations are profoundly interested. The important question confronting us is, Shall the American people, unaided, bear the burden of fortifying and protecting the canal? Shall we place upon future generations the additional burden made necessary by costly fortifications and by the maintenance of a garrison of at least 10,000 men? Shall we add the canal to our already extended coast line, thereby creating the danger of its injury or destruction by war? Or shall we call upon the nations of the world, who are to enjoy the benefits of the canal, to join with us in guaranteeing its protection, preservation and safety and the protection of vessels entering or desiring to enter it in time of war as in time of peace? The initial expense of the necessary fortifications, should we decide to fortify it, would not be less than $25,000,000; in all probability it would exceed $50,000,000. The annual expense of maintaining such fortifications 2,000 miles from home would probably amount to $5,000,000. Surely at a time when the results of war and the preparations for war consume more than 70 per cent. of our national revenue it is wise for us to pause and consider whether this additional burden may not be avoided.

When in 1901 we were preparing to undertake the vast enterprise we entered into a treaty with Great Britain relative to the complete neutralization of the canal. The preamble and Article III of this treaty are as follows:

"The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end remove any objection which may arise out of the Convention of the 19th of April, 1850, commonly called the Clayton-Bulwer Treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in Article VIII of that Convention, . . . have agreed upon the following articles:

ARTICLE III.

"The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the Convention of Constantinople, signed on the 28th of October, 1888, for the free navigation of the Suez Canal, that is to say:

"1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these Rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels thru the canal shall be effected with the least possible delay in accordance with the Regulations in force, and with only such intermission as may result from the necessities of the service.

"Prizes shall be in all respects subject to

the same Rules as vessels of war of the belligerents.

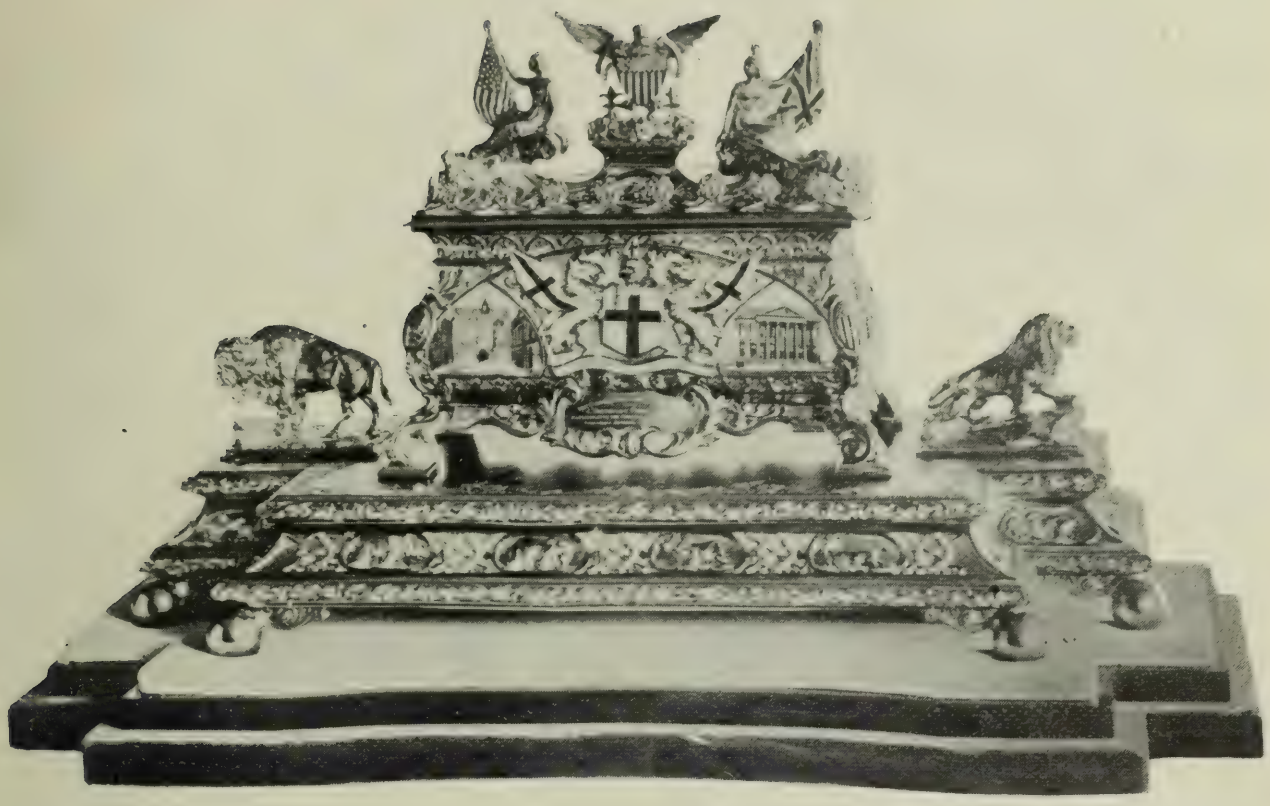
"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this Article shall apply to waters adjacent to the canal, within three marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent."

If these provisions mean anything they mean that, so far as Great Britain is concerned, we are bound by solemn treaty obligations to see to it that the canal shall be and remain forever open to British ships, in time of war as well as in time of peace. And while it is probably true that no other nation could claim any advantage by virtue of this treaty, it is also true that we have thereby placed ourselves under moral obligation to maintain an open canal for the ships of all nations at all times, in war as well as in peace.

What, if any, advantage would accrue to us from the fortification of the canal? In this connection we must keep in mind the favorable location of the canal from a military point of view. Its remoteness from the great naval powers of the world affords us an enormous advantage. In order, however, that it may be the "military asset" which some of our military experts say it should be, it is absolutely necessary that with our fleet we should control the Carribean Sea and so the Atlantic approach to the canal. Under the existing conditions, with a proper coaling station at Guantanamo or at some other convenient place, our warships afford us a control over the Atlantic entrance which is full, adequate and complete, and which would not be strengthened to any considerable degree by the establishment of land fortifications at that end of the canal. And in order to preserve the canal as a military asset it is equally important that our fleets should control the Pacific Ocean. For this reason we are fortifying at enormous expense Pearl Harbor in the Pacific Ocean. When that work shall have been completed, until conditions enormously change, we shall command with our fleet the Pacific entrance to the canal as absolutely as that on the Atlantic side. No land fortifications, however costly, would add materially to our advantage in those waters. It must be borne in mind always that a foreign fleet to become a menace to our position at Panama must have somewhere within reasonable distance a base of supplies. No fleet, however invincible, could travel from Japan to Panama, and, without the advantage of a naval station, expect to engage successfully with our warships.

Rear-Admiral Evans is quoted to the effect that with fortifications alone it would be impossible for our fleet to pass from one ocean to the other if there were a hostile fleet awaiting it; that it would be impossible for such fortifications to protect our warships until they could emerge from the canal and form in line of battle; that a hostile fleet would be able to concentrate upon each vessel as it appeared and destroy it. This is undoubtedly true as far as the Atlantic side of the canal is concerned, and there is little doubt as to the correctness of Rear-Admiral Evans's view as to the Pacific approach to the canal. With all the fortifications possible it is still apparent that in order that the canal might be of military advantage to the United States in time of war a guard of battleships at each of its entrances would be an absolute necessity. It is equally apparent that with such a guard the fortifications would be unnecessary, if not entirely useless. The proposed fortification of the canal without its neutralization would be a burden in time of peace and in time of war a source of weakness rather than of strength.



What is proposed in place of this useless expenditure of money? That our Government enter into treaty agreements with the nations of the earth similar to those now existing between the United States and Great Britain—which will never be abrogated—by means of which the canal shall be completely neutralized and our permanent task shall be limited to the ordinary work of maintaining, protecting, and policing it. To be sure, we are told by our military leaders that such treaties are of little avail; that they

are "good up to the time of the declaration of war only." But that argument should not be controlling in our twentieth century civilization. As it fell to our constructive genius to demonstrate to the world that the canal could be built and that without the sacrifice of human life, so American diplomacy should demonstrate the possibility of a world agreement so strong that it could not be broken, so lasting that it could not end. "Do you mean," some one will ask, "that our Government should enter into such treaty obligations with Japan, for instance, that if we should thereafter become engaged in war with her, her warships would have the right to pass peacefully thru the canal?" Precisely. We made just such a treaty with Great Britain before we stuck a spade into the Canal Zone. We did so because it was to our advantage to have such a treaty agreement with her. What is to be feared from such an arrangement? Rear-Admiral Evans's statement as to the difficulty we should encounter in passing our ships through the canal, even under the protection of costly fortifications, with a hostile fleet blockading the exit, applies with equal force when we reverse the situation. No Japanese warship in time of war with us would get thru the canal into the waters of the Atlantic Ocean without finding our fleet ready to deal with it before any companion ship could pass thru the canal to its support. Suppose for a moment that a private corporation, such as the old French Company, was constructing the canal. Would any one suggest that such a corporation would not see the advantage that must accrue to it by having the safety of the canal at all times guaranteed? Yet no one can deny that it would be equally advantageous for the United States to have such an international guaranty.

But suppose that we had such an international guaranty and that we became involved in war with some nation, and that, defying its obligations, it should send a fleet to injure or blockade the canal, what redress would we have? The answer is, first of all, that in case of war, fortifications or no fortifications, our battleships would be stationed at each entrance of the canal. The second answer is that, until conditions enormously change, a hostile fleet with no naval station within reasonable distance would find it difficult even to annoy us in connection with the canal. Again, the answer is that this international guaranty should be so strong that any interference with the canal would be an act of hostility against all the rest of the world. Finally, the answer is that the rest of the world would join us in exacting such indemnity as would deter all others from disregarding their treaty obligations in that behalf. The neutralization of the canal would mean that it would cease to be an object of attack.

This is no untried method of protecting a great waterway. The nations of the Old World have established a precedent and set an example, which we will do well to observe and follow. In 1888 Great Britain, Germany, Austria-Hungary, Spain, France, Italy, the Netherlands, Russia and Turkey signed a convention providing that "the Suez Maritime Canal shall always be free and open in time of war as in time of peace to every vessel of commerce or of war without distinction of flag." Ten years later when we were at war with Spain we desired to send warships thru that canal. There was some apprehension as to whether objection would be made to our doing so in view of the fact that, while Spain was a party to the above mentioned treaty, we were not. Our Government directed Mr. Hay, our Ambassador in London, to ascertain the attitude of the Government of Great Britain. Mr. Hay promptly reported that "the attitude of the British Government is that we are unquestionably entitled to the use of the canal for warships." It is not always true that "such treaties are good up to the time of the declaration of war only." What the Old World has done the New World can do. The United States stands for peace. The canal is a peace enterprise. Its greatest function is to further the commerce of the world. Let us make it forever a great highway of peace.

WASHINGTON, D. C.

Mr. Roosevelt's Casket

The Freedom of the City of London, which was presented to Mr. Roosevelt last week, was handed to him in a magnificent gold and jeweled casket. The general outline of the box is oblong, the front and reverse being divided into four panels containing enamel painted views of the Guildhall, the Mansion House, St. Paul's Cathedral and the Tower Bridge. The space between the two front panels is occupied by the arms of the City of London, in enamel, with an ornamental shield below, upon which the following inscription is engraved:

> "Presented by the Corporation of the City of London to Theodore Roosevelt, Ex-President of the United States of America. Guildhall, London, 31st May, 1910."

At each of the four corners of the casket a shield is placed, upon which are enameled the arms of Great Britain, the City of London, the United States of America, and the Union Jack. The center of the lid is occupied by a trophy of festoons and other ornaments, which support the American Eagle, with the Stars and Stripes in enamel, the monogram of the recipient being shown in fine diamonds and sapphires. An important feature of the casket is the two beautifully modeled figures seated at either end of the lid, one allegorical of America, holding the national flag, and the other representing Britannia, holding the Union Jack. The base on which the casket rests has extended platforms, on one of which stands a finely modeled American bison, and on the other a model of a lion.

Woman as a Metonymy

BY ANNIE G. PORRITT

[The theory propounded by Mrs. Porritt that man is the emotional sex is so novel that we considered it desirable to have it discussed by a competent authority and necessarily by a man since the author states that the article is intended exclusively to be read by men. Professor Ward has shown in his sociological work that the feminine sex fills a higher rôle in the scheme of nature, from the spider up, than has hitherto been assigned her.—EDITOR.]

THIS is an article written by a woman, but intended exclusively for men; for it is an attempt to explain woman, and women do not need to have themselves explained. A woman is not a mystery to women. It is only men who find our sex a problem, a paradox, an insoluble and inexplicable riddle. And all this mystery and lack of understanding are wholly unnecessary. Woman is neither very profound nor very intricate. There is no reason on earth why men should not understand woman—or rather there would be no reason if men could be content to take her simply and literally. Instead of that men persist in approaching her as a figure of speech, and it is because they then expect a figure of speech to be literally accurate, that they fall into errors and mistakes concerning the nature and character of women.

In any other case, when a man is making a study of anything, animal, vegetable or mineral, he approaches the object of study in a spirit of detachment. He treats it wholly objectively, and his feelings are not allowed to intrude upon his intellect. He is thus able to form correct estimates of the nature and qualities which present themselves; to classify the object of his study, and to form correct judgments concerning it. With regard to woman, ever since men and women have existed, the emotions aroused by women in men have interfered with any clear understanding of the less emotional by the more emotional sex. Women being of much cooler and less excitable nature, have in this respect an advantage; as they have been able with detachment to study the character of man. True they have used the knowledge which they have acquired often very selfishly. They have learned to coax and manage, to govern by indirection and to exert an influence which often becomes tyranny. Still, sometimes the clear understanding which they have been able to acquire of the virtues and the shortcomings of their mates, and of mankind generally, has given them a broad-minded tolerance, a wise and quiet patience, which has enabled them to submit to much injustice and even to ill usage without losing all affection or kindliness for their oppressors. Roughly speaking, therefore, women may be divided into two classes—those who understand men and use their knowledge to establish their own authority and to get their own way—those who influence men by indirection, and those who understand men, and thru a large understanding are able to make allowances for their shortcomings, while giving them credit for their good qualities. The women who do not understand men are too few to form a class. Nor must the modern rebellious woman be put under this heading. Her revolt against present conditions is not a result of lack of understanding, but of a still clearer and more wide-minded knowledge, both of men and women, and an intense and burning desire to put an end to the war of the sexes which must go on until justice and equality take the place of male dominance, tempered by female influence.

It has already been intimated that man's lack of understanding of woman is due to too great an admixture of emotion in his judgments. It remains to show how this emotional element has affected his intellect. I have headed this article "Woman as a Metonymy," and it is from the point of view indicated by this title that I shall try to explain my sex. A metonymy is a figure of speech, I was taught in my school days, in which a part is taken for the whole; one article

for another with which it is commonly associated; or, what is chiefly to the purpose here, an emotion for the object which arouses it. The metonymy is all pervading in our emotional life. It often affects the estimate that parents form of their children; it builds up false characters of each other to the young lovers; it makes one's enemy an object worthy of abhorrence. But it seems to be only in the case of man's estimate of woman that it is the means of permanently obscuring the character and nature of the whole range of beings to which it is applied, and of making it an impossibility for a whole class ever to attain to a correct knowledge of these beings.

In forming his estimate of woman, a man never seems able to free his mind from the idol of the metonymy. With regard to women, love and its correlative hate, adoration and contempt, are too strong to allow a man clear-sighted vision; and women are continually loved, admired, hated and despised, not for what they are in themselves in nature and character, but on account of the emotions which they may, however innocently or ignorantly, inspire in a man. The strongest human passion that can be aroused in man is love of woman. So strong a passion is of course liable to irregularities and abuse, and every abuse brings its retribution. Thus, as a metonymy woman becomes a lure of the evil one, an emissary of the devil, something to be shunned and abhorred, to be forever abjured by the ascetic who would save his soul by self-denial. So too to the man who has allowed his passions to degrade him, woman becomes a thing of contempt, something so low and vile as to be beneath human level and certainly unworthy of full human rights. On the other hand, to the lover and to the man who has succeeded in preserving intact his illusions concerning women, woman is an angel, something above human level, something too pure and bright to be allowed to come into contact with the commonplace and sordid details of daily life.

Whichever way it is, the living, breathing woman, the honest, human woman, who cares little for illegitimate influence, but who pants for human companionship and a share in the real things of life, suffers. She resents being placed on a pedestal almost as much as she resents being trodden down into the mire. She has no desire to bend men to her will, by the exertion of her sex influence; to twist them around her dainty little finger. Nor does she wish to be carried on the shoulders of the man she loves—merely a burden, not a helper in the great work of life and living. She wants to be on her feet, putting out all her powers, and using all her faculties, side by side, with her comrade, man—a place which would readily be accorded her, if men could only understand that she is human, that in most respects she is a being of like feelings and passions as themselves, and that the misunderstandings that arise are due not to her complexity or her unreality, but to the fact that men have built up a character for her out of their own emotions—the emotions which she arouses in them—and that they are then utterly perplexed because the real woman refuses to be fitted into the framework which they have prepared for her.

One example of this misunderstanding can be found in the well-known but lying lines—written of course by a man—"Man's love is of his life a thing apart, 'Tis woman's whole existence." Now there never was a woman, outside of man's imagination, to whom love of some man was the whole of existence. As a matter of fact—one that every psychologist will confirm—while women may in general, and probably largely owing to circumstances, be more faithful in love than men, love with them is a passion much less strong and less absorbing. Man has done his best to make marriage the whole of existence to women, by restricting women to this one trade, if they are to make a respectable livelihood. But marriage and love are by no means synonymous, and every one will allow that a woman usually keeps her self-possession and her balance, when in love, much more than does a man. A woman with a home and children is fortunately rarely wholly unhappy, even if neglected or actually ill-used by her husband; and most women are capable of filling their lives pretty full of interest and happiness long after the glow of love's young dream has faded away.

The attribution of emotionalism to women as a sexual characteristic is another example of the metonymy. Women arouse emotion in men, consequently emotion especially belongs to their character. And yet a very momentary consideration of men and women will lead to the conviction that men's emotions are characteristically deeper and more easily stirred than are the emotions of women. In politics, in religion, in business, in the pursuit of wealth or pleasure, men show an intensity, an eagerness, an *acharnement*, which is rarely equaled by women. If, as is evident, men have surpassed women in great achievements, in building up colossal fortunes; in epoch-making discoveries, and inventions; in monuments of literature and of art, is not this due not so much to any superiority of intellect as to greater driving force which men have available for their work on account of their more powerful emotions? If the differences between men and women are calmly and carefully examined, which so far, for lack of a mixed jury of men and women, they can scarcely be said to have been, is it not probable that the basal difference will be found to lie in the greater emotionalism of man? Certainly if the reason for man's misunderstanding of woman be analysed, it will be found to be due chiefly to this emotionalism, and to the consequent tendency of men, with eyes able only to see thru the mists of feeling and passion, to regard woman, not as a human being, but as a figure of speech.

HARTFORD, CONN.

The Historical View of Woman

BY LESTER F. WARD, LL.D.

AUTHOR OF "DYNAMIC SOCIOLOGY," "PURE SOCIOLOGY," ETC.

THAT men do not fully understand women is only a part of the wider truth that mankind do not understand themselves. Neither sex understands either itself or the other sex. Tho man is doubtless the proper study of mankind, all the study of man since Pope's day has taught mankind very little about man. This article of Mrs. Porritt is an excellent illustration of this.

The only way to understand the sexes is to learn their history and the history of sex itself. This carries the student back not merely to the remotest ages of the human race, but to the beginnings of life itself.* Such preparation is not vouchsafed to the present generation, which, in its exclusive study of "the humanities," wholly neglects the study of humanity.

The writer of this article, tho a keen observer of human nature, seems to be as innocent of the historical perspective as the rest of the world.

There are many paradoxes besides the one that Mrs. Porritt points out, viz., that women are less emotional than men in the sense that they are "of a much cooler and less excitable nature." It does seem strange to any one capable of seeing things "objectively" that woman should be proverbially regarded as "fickle and changeable" (*varium et mutabile*), when she is clearly the conservative element in society, and the balance-wheel, as it were, of the race. All this shows that no amount of evidence can change a current opinion. The current philosophy is not based on evidence. It is based on historical events. It is a social structure that has been developed in much the same way that organic structures have been developed, and reason has no more to do with the one than with the other. The opinions that men entertain relative to women are no more the result of their rational faculty than is the color of their eyes or hair, and they can no more change those opinions by taking thought than an Ethiopian can change his skin or a leopard his spots.

The "male dominance" of which Mrs.

*See "The Past and Future of the Sexes" in this journal for March, 1906 (Vol. LX, No. 2988, pp. 541-545); "Pure Sociology," New York, 1903 (2d Ed., 1907), Chapter XIV.

Porritt speaks comes down to us from the remote age of androcracy which supervened upon the metronymic period in prehistoric times. It is capable of a historic explanation, as are all the other stages in the history of the sexes. Its present form is very mild compared with earlier forms, and the progress that has taken place in the mitigation of woman's condition is the surprising fact, rather than the existing inequalities. But this, of course, should not deter any one from striving for the ultimate removal of those inequalities. That this progress is more rapid now than ever before there is no doubt, and it will probably go on, like most other forms of progress, at an accelerated rate. The direction which it should take at present is that of securing woman's economic independence. This first of all problems Mrs. Porritt does not so much as allude to.

As regards the relative emotionalism of the two sexes, much might be said. While it does seem to be true that in matters of love woman's attitude toward man is more calm and controlled than man's attitude toward woman, it cannot be safely inferred from this that woman is less emotional than man. Her rôle has always been that of selection, and her attitude is naturally defensive. Her long schooling in this line has made her the cautious sex, while man is essentially reckless. This must not be mistaken for greater rational deliberation in women. It is the manner in which they have evolved, and is no more rational than man's aggressiveness. Both may be called instinctive. When it comes to the really "objective" or "detached" study of things in general, there is no comparison between the sexes. The male sex is almost the only one capable of this. Women, as has been often pointed out, take little interest in abstract questions, questions which do not concern their personal well-being or the safety of their charge. This can also be explained historically, and is not a necessary condition, but can be and is being altered by the scientific training of women.

Most writers of both sexes regard woman as the more highly developed sex from the affective side. Comte called her the *"sexe aimant."* The "lying lines," quoted by Mrs. Porritt, and, as she says, "written of course by a man" (Byron), are exactly paralleled by those of a woman, Madame de Staël, perhaps written earlier, where she says that "love is the history of a woman's life; it is an episode in man's."

Mrs. Porritt is of course obliged to admit that most human achievement has been the work of men, and her explanation is characteristic of the unhistorical method of treating such questions, viz., as "due, not so much to any superiority of intellect, as to greater driving force which men have available for their work on account of their more powerful emotions." That certainly is a strained explanation. But is there any truth in it at all? It may be admitted that man's sexual emotions, in common with those of the male sex of all species, are more acute, more imperative, and more powerful than those of woman, but can the same be said of his other emotions? Probably not, and only a very small part of achievement is connected with the sexual emotion. But achievement is not the result of emotion. A certain amount of interest and even of enthusiasm is essential, but, given this, the real work is that of intelligence, skill, training and equipment for it. Even genius is largely the product of opportunity.

John Stuart Mill, tho the proper data for such a study did not exist in his day, saw the true explanation of woman's inferiority in the great lines of human effort. He justly said that women had had no chance to show what they could do, that they were not professionally trained for anything, as men are, that they were therefore virtually all amateurs, and that the only just comparison would be of all women with amateur men. Such a comparison would certainly be creditable to women, for it may be said of amateur men, much more truly than of women as a whole, that they have accomplished nothing in the work of the world.

But when we bring the searchlight of history to bear on this question it becomes one of the simplest in the whole range of evolutionary problems. The race has lived under the androcentric philosophy since long before the dawn of recorded events. Vast prehistoric

stretches of the androcratic régime prepared the way for the patriarchal system, and woman was loaded with the whole weight of that system before history began. The earliest literature is permeated with it, from the Code of Manu to the Eumenides of Æschylus. It created the *patria potestas* and the Salic Law. It cropped out thru medieval history in codes and pandects, in papal bulls and Witch Hammers. Woman, as Mrs. Porritt says, became "a lure of the evil one, an emissary of the devil, something to be shunned and abhorred, to be forever abjured by the ascetic who would save his soul by self-denial." Under such an incubus what could woman do? There was nothing for her to live for. None of the great vistas of fame were in sight of her. No avenues of renown or even of happiness were open to her. The codes of law discriminated against her at every point. She could propagate the species or she could go into a convent, but beyond this her life was barred. The utter absurdity of expecting any great achievement from a sex thus circumscribed would seem to be apparent to any rational being. Still worse is the tendency to blame the sex for it, or to impute it to any natural inferiority. But, as remarked at the outset, men's judgments on such questions are not based on evidence or logic or any form of reason. They are the products of the system of thought that has been evolved during the history of mankind. It is also unfortunately true that the kind of education that is doled out, even still today, and in the highest institutions we have, fails to enlighten even the few who could and would reason, on the simple historical facts which so perfectly account for the present relations of the sexes.

Brown University, Providence, R. I.

Theodore Roosevelt

BY MOSES E. CLAPP

United States Senator from Minnesota.

WE do not have to go far to find the basis of the confidence of the American people in Theodore Roosevelt, when we consider his character and his relation to the thought and purpose of the American people.

Free government must rest upon the proposition that such government reflects the will of the people and develops according to their purpose. Under this principle leadership reflects such purpose. In fact, leadership involves a knowledge of the forces to be led relating to existing conditions. Thus, great leaders have arisen at a time and with a disposition related to forces and conditions by which they have been able to crystallize such force. Such leadership, of course, accentuates the force to be led, and when the leader is the incarnation of the thought or purpose which underlies the forces and possesses a strong personality, he not only crystallizes such thought and purpose into concrete forces, but materially adds to it. This explains the leadership of Theodore Roosevelt. American thought was ripe for the declaration that this Government is greater than any of the agencies created under its sanction. Turn over as you will all the issues which have come to be known as the Roosevelt policies, and the underlying issue, after all, is simply this: The Government itself is greater than any of its authorized instrumentalities.

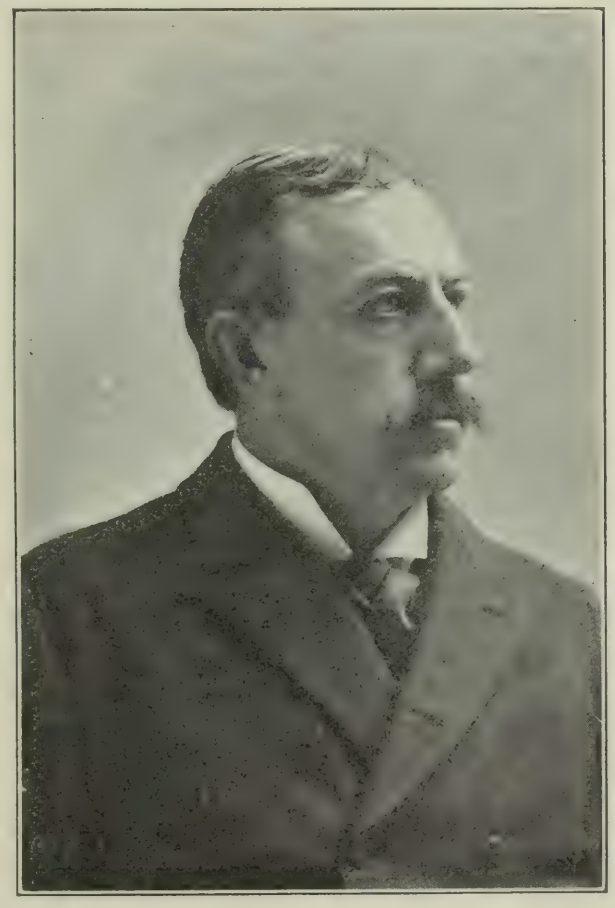
Some leaders must study conditions, that they may adapt their views to such condition, but it was not necessary for Mr. Roosevelt to sink the plummet into the current of public thought to sound its depth, ascertain its direction or measure its force, for he was himself a part of that thought and purpose. Taking the leadership of purpose dear to the American heart, being in absolute harmony with the purpose and object, his splendid personality not only making it a concrete force, but materially adding to that force, it is no wonder that the American people retain absolute confidence in him.

Washington, D. C.

The Permanent Wealth of the Nation

A Commencement Address

BY DAVID STARR JORDAN, LL.D.



President of Leland Stanford, Jr., University.

NOT long ago died, in Washington, Simon Newcomb, astronomer and philosopher. It was said of him: "He left a record wholly blameless and wholly salutary, whose work added to the permanent wealth of nations."

At the same time died Edward H. Harriman, promoter and financier, likewise great and likewise effective, whose life and work added largely to our nation's wealth.

But the riches they produced were not like in kind. The permanent wealth of nations, like the kingdom of God, another name for the same thing, is within ourselves. It is not measured by outside accumulations.

The activities of the scholar, the clear-headed, broad-minded man of science, have added to the permanent achievement of the human race. Men know and think more clearly because Simon Newcomb thought clearly. Men act more wisely because they think more clearly; and all this because Simon Newcomb was wise, courageous and productive. We are all the better off, more or less, for his life, and this in proportion to the loftiness of our own ideals and the degree in which our lives have come into contact with his work.

DAVID STARR JORDAN.

Harriman was a wise man, too. He saw ends from the beginning, and he achieved the results he aimed for. He had his reward. He made the despised Union Pacific and the abused Southern Pacific a continuous and valuable piece of property. He added to his own wealth, to the wealth of the railroad, to the wealth of various associates, and incidentally to the wealth or at least to the early development of the Great West.

In part this would have come without him, in a sooner or later time. In larger part, it is a matter of absolute indifference to the human race whether it ever came or not. In other words, in those matters in which "the permanent wealth of nations" is concerned, in the long future of mental and spiritual development, the name of Harriman finds no place. The name of Newcomb in the same connection will stand in large letters among those who by life and influence have made this a broader and a better world, or who have helped us to see better what a broad and beautiful world this really is. We may easily conceive that in the next generation the name of Harriman will be chiefly remembered, not for his wealth nor his mastery of railroads, but rather for the noble record left by the scientific observers who took part in the Harriman expedition to Alaska. In like fashion the time will come when the name of Carnegie will not be associated with steel and

iron, and even that of Rockefeller will not suggest Standard Oil or the association of monopolies. The Carnegie Institution and the Carnegie Foundation will outlast these things, and the Rockefeller Institute for Medical Research represents one of the wisest and most far-reaching uses to which any man's money can ever be put.

This discussion may serve as a text for the thesis that there are now, and always have been, all over the civilized world, men who add to the permanent wealth of nations their intellectual and moral resources, and the extension of sanity, of cleanliness and of justice. It goes without saying that the men who accomplish these results do not work for money. They do not work for self alone, nor for immediate results. Theirs is the far future, the future which comes it may be long after the workers are themselves forgotten. In their work they find their own reward. And a second thesis is this, that men of this type, now and ever, outweigh in influence the other types of men. In the endless struggle which humanity has had against caste and privilege, against plunder and injustice, the man who works for the larger end wins always the final success. It may not appear so today nor tomorrow, nor at the end of the century, nor at this or any other stage of the game—but the game is not yet finished.

All the acquisitions of man, Emerson tells us, "are the victories of the good brain and the brave heart. The world belongs to the energetic, belongs to the wise. It is in vain to make a paradise but for good men."

In God's world those efforts only last which meet with his august approval. In other words, that which endures is that which deserves to endure, because it helps in the conduct of life. What man can accomplish must be wrought on his fellowman. Only man is plastic in man's hands. The universe is too big for us; the tough old world has held its way for centuries of eons. We can neither make it nor mar it. Wave and storm, sunshine and song, tornado and torrent, comet and earthquake, all these things will take care of themselves. Life is the only material our hands are strong enough to hold. The only permanent mark we can make is on the lives of men. Whatever makes men better, stronger, saner, more just, more gentle and more happy, this is what counts. This is all that can add to "the permanent wealth of nations."

When they hung John Brown fifty years ago, many blamed him for resisting the power of the law, throwing away his life and getting nothing for it. He could not, as Thoreau said at the time, "get even a vote of thanks or a pair of boots for doing this." "He could not get four and sixpence a day for being hung, take the year around." But John Brown was not looking for a vote of thanks. It was not for four and sixpence a day that he stood between force and its helpless victims. It was to illuminate the nature of slavery. It was to help his fellow citizens to read the story of their institutions in the light of history. "You can get more," Thoreau goes on to say, "in your market (at Concord) for a quart of milk than you can get for a quart of blood, but yours is not the market heroes carry their blood to." The great, the strong, the sane, the pure, those who have ennobled our race by being part of it, have not been paid by the day or by the quart, not by riches, nor fame nor power, nor anything that man can give. The tragedy of St. Helena lay not in the failure of gigantic plans, the collapse of empire, but in the futility of the aim to which effort was directed. The story of Harper's Ferry, the body moldering while the soul goes marching on, is not recorded in history as tragedy.

It is said that Alexander sighed for more worlds to conquer when he had subdued his ill-armed neighbors in a little corner of the earth. Other worlds lay all about, and he knew nothing of their existence. The secrets of the rocks he had never suspected. He had no curiosity for the movements of the stars. The mystery of life—its endless variety, its perennial unity—were no more to him than to a jackal. Steam, electricity, the growth of trees, the marvel of human consciousness, all these had no existence to Alexander the Great. The only conquest he knew—that of men's bodies—went but a little way. The great world of men, even in his day, was beyond his knowledge. The great actual universe, the heavens that declare the

glory of God, lay about him in majestic invisibility. His world was a very small one, and he had done but a very petty thing in a very little corner.

The demand for more worlds to conquer is not a sign of greatness. It is the stamp of ignorance. It is a mark of provinciality. It indicates that nothing worth while is yet accomplished. There is always enough that a man can do. "There is always room for the man of force, and he makes room for many." No Lincoln ever sighed for more nations to save and unify; no Luther for more churches to purify; no Darwin that Nature had no more hidden secrets for him to probe to their depths; no Agassiz for a broader universe in which to trace the thoughts of God.

In test of these propositions on the practical side, we may look over the history of our own country in search of the names of men whose total influence has been a civilizing power, whose lives have added to "the only permanent wealth of nations." It is not hard to find such names. Many of them have been recorded in large letters on the pages of our history. Cities have been named for these in public life. Counties in State after State record the names of Washington, Franklin, Adams, Jefferson, Hamilton, Hancock, Jay, Monroe, Marshall, Carroll, Clinton, Henry, Randolph, Madison and the rest, down to Lincoln, wisest of all, after whom the roll of the counties is full. Each of these names represents some addition, large or small, to the development of democracy, to the permanent wealth of nations.

There is an ingenious and useful book, called "Who's Who in America," which gives us each year the names and a short history of some thousands of men in the republic who have acquired temporary or permanent note or notoriety, or who have added something worth while to the permanent wealth of nations. Some among these have been merely caught in the flitting limelight. Others have a single talent of such a character as to have attracted their neighbors' attention. But besides these thousands in "Who's Who," we know that hundreds of thousands of others, equally worthy in the aggregate, are going their way, unheralded and unnoticed save to those with whom they have close personal relations. These men, who are not "who," who fill no place in the biographical dictionaries, who stir no patriotic pride when their names are called—they are the substance of our nation, the units of which civilization is built. And so long as these units are sound, we need have no fear for the future of the republic, built of such materials. All of these are potential heroes; any one of these may at some time stand out from his fellows so as to catch the world's eye. But whether this shall happen or not, each man who holds his place, who does his own part without shirking, without overreaching, has helped to clinch the future of democracy, and in his degree has added something to the permanent wealth of nations. And of like substance with these common men are those of larger grasp and keener intelligence, who form the natural leaders, the scientific experts, of enlightened democracy.

We of today are building on the work of those who went before. We enter into their labors and their possibilities are our actualities. For the men of the past century, there is no "Who's Who" to point out whom we should praise, admire or emulate. Just now we are having a peculiar revival of interest in their various careers and in their many lines of work.

A gift has been made to the University of the City of New York of a Hall of Fame, whereon each panel shall be inscribed with the name of a great American. These are chosen from among those no longer living, by the franchise of a hundred electors, still living, each elector vouched for by the editor of "Who's Who."

The Hall of Fame is thus described:

"A colonnade five hundred feet in length looking towards the Palisades and the Harlem and Hudson river valleys. The exclusive use of the colonnade is to serve as a hall of fame for great Americans. One hundred and fifty panels will be provided for inscriptions. Fifty of these were to be inscribed in 1900, provided fifty names shall be approved by the two bodies of judges. At the close of every five years thereafter, five additional panels will be proprovided so that the entire number may be completed by A. D. 2000."

A second general election to fill the panels left unoccupied takes place very soon. The field is an open primary, in which the men and women of the present urge

the claims of men and women of the past. Only a few names, like those of Washington and Lincoln, of Emerson and Lowell, of Agassiz and Audubon, compel the vote of every elector. For the rest, the nominations interest us more than the final election.

Statesmen in abundance, from the first to the last, we record, altho in all time and in all lands the existence of statesmen has been obscured by the swarm of politicians. They crowd about the statesman like suckers about a stalk of corn. The shoot that finally reaches maturity, that is the real cornstalk. The public man that lasts, he is the statesman.

Our soldiers have not been professional warriors, who have exalted their terrible trade. They have been men of ourselves, men of peace, for the most part only too glad to escape from the cruel necessities of fratricidal war. And among these, North and South, there are some on whose nobility all electors must agree.

The longest roll and the one most typical of America is our list of great inventors and engineers. The vast resources of a new country lead men to consider how best to make these resources available. The sons of pioneers inherit the power of making the most of themselves and their surroundings.

Great business men we have had in abundance, but until the results of business are placed at the people's disposal, business bears little relation to the permanent wealth of nations.

Gold must be exchanged for truth before civilization can accept it as a commodity of continuing value. Permanent wealth has a different standard of measurement from that used by Dun and Bradstreet.

Great teachers, great preachers, great men of science, America has had in her share, altho the form which research has naturally taken has been that of exploration rather than experiment. The work of the closet is not done by men whose open door discloses three thousand miles of virgin territory.

But the very names of our candidates for the panels of the Hall of Fame are inspiring. In their varied power they are in themselves a history and a vindication of democracy.

Take them—the As and Bs—as they stand in alphabetical order: Adams (four of them, the third the greatest), Alexander, Asbury, Astor, Bache, Baird, Bancroft, Beaumont, Beecher (two, besides a sister), Benton, Blaine, Blair, Boone, Booth, Bowditch, Brainerd, Brewster, Bushnell, Bryant, Phillips Brooks and John Brown. The roll goes on and the history is unfinished, but in the hall of fame of the past, the "Who's Who" of today, and best of all, in the promise of the young men and young women who are pressing on, we find the guarantee of the strength of the republic, of its share in the permanent wealth of nations.

It is no part of my purpose to discuss the nature of greatness, or to indicate those men in any field to whom we should turn in gratitude or in emulation. I have wished only to sound a note of hope. Now and ever, our country has had her share of men whose lives have intensified and clarified human knowledge, whose example has strengthened human action. "The permanent wealth of nations" is growing under our hands, and it is for us as university men to do our part in its extension.

We stand at a turning point in our political history. Factionalism and sectionalism have been swallowed up in the larger concern of a larger national life. The government by parties, so long supposed to be a vital necessity in free government, is passing away. In future we shall be governed by the demands of the nation. We are interested, not in party success, but in the welfare of our people. The minor questions of party advantage, of party solidarity, of party domination, have given way to the pressure of national duties, of national accomplishment, and the university men of our country are taking the lead in this beneficent change. When next they publish the "Who's Who" in sound patriotism and good citizenship, may the men of Stanford never be found wanting. The chief needs of our nation today, in so far as they are related to our government, may be summed up in these four: Justice, Sanitation, Temperance, Peace. And the first duty of every public man is found in loyalty to the needs and the liberties of the people.

STANFORD, CAL.

THE HOUSE AND A PORTION OF THE GARDEN.

An Historic Italian-American Villa

BY SALVATORE CORTESI

[The remarkable old Villa Palmieri which, as Mr. Cortesi says, has recently passed into the possession of an American, is of great historic and artistic interest. If we are not mistaken, the American owner is Mr. James E. Ellsworth, of this city.—EDITOR.]

ITALY is celebrated not only for her ancient monuments, her art treasures and her churches, but also for her villas, some of which are bound up in the history of the centuries and contain monuments, art treasures and even chapels. The best examples of these magnificent creations of the Middle Ages are the Villa Borghese, the Colonna Gardens, the Doria-Pamphili Villa, the Villa Medici and the Villa Corsini in Rome. All contain masterpieces of gardening and architecture, together with unequaled fountains and precious collections of paintings and statuary.

Tho Tuscany for some time could not rival Rome in luxurious villas and gardens, it is interesting to recall how its best villa was created. In the middle of the fifteenth century Luca Pitti, the powerful opponent of the Medici, envious that the famous Filippo Strozzi should have built a palace so generally admired and considered the largest of the time, exclaimed: "It shall be so no longer; I will build a larger. The palace of Strozzi shall be measured to stand within my court, and every one of my windows shall be as large as his portal." He carried out his boast. This palace was designed by Brunelleschi, but he ruined himself in the process, leaving, however, a structure which, together with the Boboli gardens added later on,

THE ORIGINAL DOOR OF THE OLDEST WING.
Thirteenth century. With Fini coat-of-arms.

has made his name celebrated even to our days. An older, and from an historic-literary point of view more precious, edifice near Florence is the Villa Palmieri, which in 1907 was bought by an American, of New York, and was admirably restored in the most minute particulars, so that it has now returned to its ancient glory. The villa dates as far back as 1259; it stands only two miles from Florence on the southern slope of a hill bathed at its foot by the torrent Mugnone, having near by an altitude where was Dante's villa, which afterward passed to the Portinari, the family of Beatrice, and where a well is still preserved beside which the great poet wrote and meditated. The Villa Palmieri originally belonged to the family of Cione di Fini, a noble house entirely devoted to literary pursuits and inscribed in Florence among the Guild of the Linen Weavers. This was only nominal, however, as at that time it was necessary to join a guild to enjoy certain privileges of citizenship. Dante himself was in the guild of physicians and apothecaries for a similar reason. Then the villa was called *Schifanoia,* a name not uncommon to Tuscan villas, and which signified "avoid care."

The most important event in connection with this now truly royal residence is that recounted by Boccaccio. It was the spot where the seven lovely girls and three young men met during the plague which ravaged Florence in 1348, each telling one tale a day, and thus forming that group of one hundred stories comprised in the "Decameron" which won its author the title of "Father of Italian Prose," as Dante was that of poetry. In the "Decameron" Boccaccio describes the villa and ends by saying: "Its beautiful order, its flowers, and its sparkling fountain gave so much pleasure that all began to affirm that if Paradise were on this earth they could not imagine what other form it could have but that of this garden, nor could they think what other beauty might be added to it."

Shortly afterward the villa was bought by Nuccio Solosmei, a member of one of the oldest and noblest Florentine families, whose tombs were in the Piazza del Duomo. It was while walking among these tombs that Guido Cavalcanti, Dante's friend, used to compose his poems. Besides other additions the Solosmei put three coats of arms over the door, with three faces, which could be seen in a reproduction of the villa still in existence in 1800. These three faces, according to some writers, were the portraits of the three young men who told the tales of the "Decameron," and perhaps were the cause of the villa being called "Tre Visi" (three faces) for four

centuries. According to others the name "Tre Visi" came from a bas-relief representing the heads of the Trinity which once existed there; and according to still others, from an effigy of Janus, which once adorned the grounds. The latter theory, however, is fallacious, as Janus is usually represented with two faces, never with three.

Matteo Palmieri, who was above everything a scholar, bought the villa in July, 1454, because it inspired him to write and study. His family had come to Tuscany from Germany at the beginning of the re-establishment of the Holy Roman Empire, in the eighth and ninth centuries. The legend about the origin of the name Palmieri is interesting. Otto I came from Germany into Italy to fight against Berengarius IV and defeated him. Pope Agapitus II sent a palm to Otto as a symbol of the peace which would follow his success. Otto was so proud of the gift that he asked the best of his knights to carry it around the town as a triumph, and from that time he who carried it was called Palmiere (palm bearer), to whom Otto gave the Castle del Rasoio (of the Razor) in Tuscany, so called from the sharp edge of the hill on which it was built. The Palmiere married an Italian girl, but the jealousy of the neighbors was so powerful that his castle was attacked and destroyed. His descendants, the Palmieri, went to live in Florence and owned a house at the Canto alle Rondini (corner of the swallows) which still stands. Having lost all their fortune, they then started a pharmacy, which flourishes to this day and which is still known as the Farmacia del Canto alle Rondini, the oldest drug store in Florence. The Palmieri occupied prominent positions in the Government of Florence. They represented the republic at the courts of the other potentates of the time. Their coat of arms consisted of a palm between two lions, and was for a long time conspicuous on the façade of their house, and on a wall of the Church of Santa Maria Maggiore, where they had their private chapel. On the front of the house was also, from 1460 to 1832, a bust of Matteo Palmieri, by Donatello, which was taken down because the boys of the streets had thrown stones at it and injured it. It is at present preserved in the National Museum of Florence. It cost 75 zecchini or about $200. It is now invaluable.

After having bought the villa Matteo Palmieri retired to it, and for several years was absorbed in writing some treatises, the most important being "De Captivitate Pisarum," on the conquest of Pisa by the Florentine army; "De Vita

Thirteenth century. Hole of observation in ceiling at foot.

Nicolai Acciaioli," a biography of his friend Acciaioli, and a contemporary history. The most interesting of his books, however, is the "Città di Vita" ("City of Life"), a poem a hundred cantos long, written in triplets. It was inspired by the platonic philosophy and describes the author's own fantastic voyage to the Elysian fields, whither the Cumæan Sibyl is his guide, and teaches him the origin and final destiny of the human soul. Marsilio Ficino, the great platonic philosopher, called Matteo Palmieri "Poeta theologicus," and Leonardo Dati, Bishop of Massa, said that his poem was "almost divine," but it was never published. Matteo sealed it up and gave it to the proconsul of the Guild of Notaries, to be opened after his death. In 1475, at his funeral, it was laid on his coffin as a token of great honor and glory to the dead poet, but when the poem was known the Inquisition said it was contaminated by the heresy of Origen, the great theologian of the ancient Church, and wanted to burn the book and the author's body. However, thru the intervention of the Government of the republic this was prevented and the poem, altho somewhat damaged by the flood of 1557, is still preserved in a cupboard by itself in the famous Laurentian Library of Florence.

Sandro Botticelli, the famous painter, was a constant visitor at Villa Palmieri at the time of Matteo Palmieri, who loved to be surrounded by artists and literary men. The latter ordered of Botticelli a painting representing the Assumption of the Virgin for the Palmieri chapel, in the Church of San Pier Maggiore, and in the picture Matteo Palmieri and his wife were portrayed as kneeling in the foreground at the sides. This picture also having been accused of heresy, after Matteo's death was carried to Villa Palmieri and walled up until the beginning of the nineteenth century,

THE LARGE DINING ROOM.

when it was sold, passing after several changes into the hands of the Duke of Hamilton, and finally, in 1882, it became the property of the National Gallery of London.

In 1630 the plague devastated Florence again, altho not so thoroly as in 1348, and Villa Palmieri, then stripped of all its former ornaments, was, strange to say, used as a lazarette. This made it lose entirely its desirability as a residence for a long time, and it was not until 1691 that, every danger of infection having passed away, the villa became the constant home of its owner, Palmiero Palmieri, who completely transformed it and restored it as the favorite meeting place of intellectual and aristocratic Florence during the first quarter of the eighteenth century.

George Nassau Clavering, Earl of Cooper, a passionate scholar in Italian literature, having decided to settle in Florence, bought Villa Palmieri in 1765 and made it once more the center of the literary life of his day. He married Miss Gore, who was most popular, and when she gave birth to a son (the late Lady Palmerston's first husband), the joy of the common people was so great that for three days they had bonfires and lights at their paper windows. The Earl of Cooper was also a lover of good society, and opened Villa Palmieri for balls and receptions, which Leopold I, Grand Duke of Tuscany, constantly attended, highly displeasing the Grand Duchess, as there was talk that her husband was not insensible to the exceptional beauty of the English countess. In 1824 the heirs of Lord Cooper sold the property to Miss Mary Farhill, an English lady, who was a great friend of Marie Antoinette, the last Grand Duchess of Tuscany, to whom she left her estate in her will. Marie Antoinette in her turn sold it in 1873 to the Earl of Crawford, who died seven years later, and his widow, Lady Margaret Crawford, retired to it and spent there twenty-five years of her life. Queen Victoria, who was a personal friend of Lady Crawford, accepted her invitation to spend some weeks at her villa in the spring of 1889. She went there with the Prince and Princess of Battenberg, leaving as a souvenir of her visit a cypress tree which she planted with her own hands. She enjoyed her visit so much that she returned in the spring of 1893 for a longer sojourn.

The present American owner has so transformed both the grounds and house of the villa that from the time of Boccaccio to that of the last Duke of Tuscany, each epoch has a corner so complete in furniture, paintings and style as to give the illusion of a dream. The old door of the thirteenth century house was discovered in 1909, and was returned to its place, together with the stones which formed the wall around it, they containing the coat of arms of the Fini family. It is as well for the visitor that he lives in the twentieth century, as just above his head, on entering, is an opening which served to watch who came, and "suppress" him if expedient. Another means of protection and secret refuge was a tunnel which led from the house to the grounds, discovered in 1908.

The transformation brought about by the present owner is especially admirable when one considers that next to the venerable wooden ceilings, to the almost effaced frescoes representing ancient Florentine games and scenes from the "Decameron," next to the rusted iron lamps and the ancient pendulum clocks, are all the most modern necessities for comfort — heating, gas, baths, electric light—but all so unobtrusive and well disguised as not to be inharmonious with the antique.

ROME, ITALY.

Professor Goldwin Smith

BY E. J. HATHAWAY

THE death of Prof. Goldwin Smith, on Tuesday, June 7, at his home in Toronto, at the advanced age of eighty-seven, marks the passing of one who has been an outstanding figure in literary and journalistic work for more than sixty years. The death of his wife early in 1909 was followed, a few months later, by the announcement of his retirement from active journalism. Early in the present year a fall in his own home resulted in the breaking of one of his thigh bones, and altho for a time he seemed to pick up, the shock was too much for the nervous system of one of his years.

A brilliant historian and essayist, and a keen and searching controversialist of wide knowledge and authority, Dr. Goldwin Smith has exercised an important influence on political and social movements both in Great Britain and America, extending back to the middle of the last century. For more than a generation after leaving Oxford he was actively associated with the leading men in English public life; and altho most of the forty years of his residence in America have been spent in the semi-seclusion of his Toronto home, he has not only continued in touch with the great movements of the time, but has also, by means of his acute critical faculty and that authority which he had developed in the field of English public life, had some part in the shaping of these movements.

Dr. Goldwin Smith was educated at Eton and Oxford, and in his student days was looked upon as a youth of unusual intellectual qualities. He was graduated in 1845, after an especially brilliant college career, taking the Chancellor's prize for Latin verse. In the year following he took the prize for the Latin essay, and in the next year that for the English essay. In the same year he was elected a fellow of University College, London, and shortly afterward he was called to the bar, but never practised.

Internal affairs at Oxford at this time were in an unsatisfactory condition. A resolution in the House of Commons in 1850 calling for a royal commission to inquire into the discipline, state and revenues of the university, and to report as to what action might be taken by the Crown or Parliament to promote the interests of religion and learning in the colleges, met with vigorous denunciation at the hands of Mr. Gladstone and other Parliamentary leaders. It was also vigorously opposed by the heads of the colleges and by distinguished graduates.

Lord John Russell, the Prime Minister, altho refusing to support the resolution at the time, surprised the House shortly afterward by announcing the appointment of the commission asked for. The reason was not far to seek. At this critical moment there appeared in the columns of the London *Times* a series of brilliant letters in support of the claim for a commission which stated the case so effectively as to convince the wavering Premier. These letters, which bore the signature "Oxoniensis," were written by Goldwin Smith.

Rev. Arthur P. Stanley, afterward Dean of Westminster, and Goldwin Smith, whose letters had practically forced the issue, were named as secretaries of the commission. Their report was published in 1852. The interest aroused over the question was intense, and voluminous as it was, the first edition of the report was sold out in a few days. This report is said to have been one of the most remarkable documents of the time. Its literary form and much of its substance were the work of the secretaries, and Goldwin Smith himself contributed an elaborate report on "The History of the Colleges and Halls of Oxford."

Dr. Smith was secretary to the second Oxford Commission, which later effected many alterations in the constitution, curriculum and government of the university. Mr. Gladstone, as Chancellor of the Exchequer and member for Oxford, had charge of the legislation, and

in the framing of the bill he was assisted by Goldwin Smith, Professor Jowett and others.

Meanwhile he had been constantly writing for the newspaper and periodical press on political, literary, academic and religious topics, and on account of his literary activities and his public services on these two commissions, had forced himself into a prominent place among the journalists and public men of the day. He had now become a man to be reckoned with. As a controversialist he had proved himself a vigorous antagonist. An offer of a "safe" seat for Parliament was made to him, but he refused it in favor of a journalistic career, and a journalist he has ever since remained. He wrote regularly for the *Times,* the *Chronicle,* the Manchester *Guardian,* and other of the great journals; he took part in all of the active political movements of the day; and he is probably the last survivor of the famous Manchester school of anti-corn law and free trade advocates associated with Cobden and John Bright.

In November, 1855, the *Saturday Review* was launched. This was one of the great events in English journalism. "The immediate motive in coming before the public," said the prospectus, "is furnished by the impetus given periodical literature by the repeal of the Newspaper Stamp Act"; but this was probably only half the truth. The real motive seems rather to have been a desire to overthrow the monopoly in government of the *Times.*

"It is high time," declared an article in the first number, "that we began to realize the magnificent spectacle afforded by British freedom—thirty million of *Cives Romani* governed despotically by a newspaper."

Associated in the enterprise were some of the most brilliant journalists and brightest intellects of the day: Douglas Cook, Beresford Hope, Sir Henry Mayne, Sir William Vernon Harcourt, Lord Robert Cecil (afterward Lord Salisbury), John Morley and Goldwin Smith. This was in the early days of the Reform Bill, and the *Saturday Review* was neither Liberal nor Conservative. Independent it claimed to be in everything, including politics. Its staff represented the very flower of English political, literary and university life, and a saying current at the time was to the effect that many things were new, true and of the highest importance, but to the writers of the *Saturday Review* nothing was new, true or of the highest importance.

In 1858 Goldwin Smith was named by the Government a member of the Popular Education Commission, and in the progress of his investigations for this important undertaking he visited every part of England, thus acquiring at first hand a knowledge of educational conditions and needs that proved of inestimable value to him in the criticism and discussion of educational problems.

In the same year he was appointed Regius Professor of Modern History at Oxford, a position once occupied by Dr. Thomas Arnold, and subsequently by Freeman, Stubbs and Froude.

During the American war he ardently championed the cause of the North, and in order to get more light on this subject he visited America in 1864. His prominence in educational and public matters won for him a cordial reception. He was fêted and welcomed everywhere and received an LL.D. from Brown University. In 1868, on the occasion of his second visit, he came in contact with Andrew D. White, president of Cornell University, then recently founded for the special benefit of poor students. Mr. White invited him to join the staff. An unfortunate family bereavement at this time made the invitation welcome, and accordingly he resigned his position at Oxford and became Professor of English and Constitutional History at Cornell, a position which he held until 1871, when he removed to Canada on his marriage to the widow of the late W. H. Boulton, of Toronto.

An interesting episode occurred at this time. Mr. Gladstone, by a series of resolutions in the House of Commons, had, in 1868, brought about the defeat of the Disraeli Government, and the latter was once more at leisure to take up his work as a novelist, which he had laid aside for more than twenty years. The publication of "Lothair" is notable because it was the first novel ever written by a man who had previously been

Prime Minister of England. It is a brilliant and vivid presentation of contemporary aristocratic life in England, and many of the characters are portraits from life.

Mr. Goldwin Smith was at once identified in the character of the Oxford professor. He wrote to the author as follows:

"In your 'Lothair,' you introduce an Oxford professor who is about to emigrate to America, and you describe him as a social parasite. "You well know that if you had ventured openly to accuse me of any social baseness, you would have had to answer for your words. But when sheltering yourself under the literary forms of a work of fiction, you seek to traduce with impunity the social character of a political opponent, your expressions can touch no man's honor—they are the stingless insults of a coward."

During nearly forty years' residence in Canada Dr. Smith was identified with every effor to promote the higher interests of the press. He was a member of the Canadian Press Association since 1875 and was vice-president in 1878. He had aided financially and by his pen in the launching of many Canadian literary enterprises, among others the *Canadian Monthly, The Week, The Nation, The Bystander*—all unfortunately now among the wreckage of Canadian journalism—and the *Weekly Sun,* to which, until his withdrawal from active newspaper work, he had for years contributed regularly each week from two to four columns of comment on questions of the day. For some years he published *The Bystander,* a monthly organ of personal editorial opinion—a magazine unique in journalistic annals, and one that, on account of the personality of its editor, was widely read and quoted.

Altho never a regular contributor to any local newspaper, with the exception of the agricultural journal, the *Weekly Sun,* few men have written more extensively on local public issues; and his contributions to the American press, chiefly to the New York *Sun* and THE INDEPENDENT, and in England to the London *Times* and Manchester *Guardian* and the leading reviews, have been distinguished because of their brilliant literary qualities and keen critical insight.

In Canada his opinions on public affairs have always been treated with the greatest respect, as was becoming in regard to one who for years was the companion and adviser of those who were most influential in shaping public affairs during an important era in England's political history. Many of his views on public questions—especially those in regard to the political destiny of Canada—were not such as to find favor with the Canadian people, but his sincerity has never been questioned and his influence in upholding English political traditions on this continent has on the whole been decidedly beneficial. On the other hand, Matthew Arnold, a contemporary, and in many things an opponent, declared some years before his death that the greatest loss England had suffered during the nineteenth century was the departure of Goldwin Smith to America.

Dr. Smith's literary work, apart from journalism, has been mainly along the line of historical study, with an occasional contribution to theological discussion or literary criticism. Among his best known works are "The United States: A Political History," a small volume of but three hundred pages, but containing one of the keenest and most searching studies of the development of the American republic that has yet been written; "The United Kingdom," a brilliant analysis of the political growth of Great Britain down to the passage of the Reform Bill; "Irish History and Irish Character"; "Canada and the Canadian Question," a study of the annexation question; "Three English Statesmen," dealing with Pym, Hampden and Cromwell; "Oxford and Her Colleges," based on his work on the Oxford Commission; "Lectures on the Study of History," published while at Oxford; "Lectures and Essays"; "Rational Religion" and "Guesses at the Riddle of Existence"; "Jane Austen"; "Cowper," and "Shakespeare: the Man"; besides two or three small volumes of translations from the Latin and Greek poets.

On the occasion of his seventy-ninth birthday Dr. Smith wrote:

"I have come to the close of a long and not uninteresting life. I have borne a part in important movements of opinion, the result

of which, as I look back, seems to me on the whole to have been good. I look forward with confidence to the realization of my hope for the reunion of my race, though I have no expectation of living to see it. As a Liberal, I have seen the world go, on the whole, in the way Liberals desire. I have enjoyed noble friendships, the warmth of which no difference of opinion has chilled. Regrets, and even bitter regrets, all mortals have. Disappointments I have none."

TORONTO, CANADA.

The Humors of Collecting

BY ANDREW LANG

"NO good comes of gentlemen buying and selling," says some ancient sage, but few collectors, rich or poor, agree with him. I am the least of collectors, and not worthy to be called a collector, but my sympathies are with the sage. I never sold anything but once, and I have ever since regretted this fall from virtue. I possessed a copy of each of the three volumes published by Keats in his lifetime. They are plain books, in blue boards, with paper titles stuck on behind. "Lamia and Isabella" cost me 15 shillings; "Endymion" about a pound; the "Poems" of 1817, £7 (it bore the stamp of an asylum for idiots). One day I thought that I was "rather short," as Mr. Bouncer says, and I sold my Keatses to a friend and bookseller for £50. Then I found that I was in no need of £50. I had said to my bookseller that if he could not find a purchaser I would return the gold and take the books. There was no need! I daresay he got at least £150, perhaps more, for the three volumes. The only comfort was that a lady, a total stranger, sent me "Lamia and Isabella" because she thought that I liked books, and the state of her eyes, in advancing age, made her incapable of enjoying them.

At present I am under sore temptation. Many years ago I saw a mezzotint by Dickenson after Romney; portrait of Miss Benedetta Ramus, daughter of a royal page; she married a Sir John Day, in the time of George III. In Benedetta I recognized my elective affinity; she was precisely like Sophia, in "Tom Jones," who is every man's ideal. She was a dark beauty, with the kindest face in the world. I sought for a copy of the engraving, and asked several dealers to purchase one for me if it came into a sale. Moreover, I wrote and published a poem on Benedetta and showed every sign of infatuation.

At last my aforesaid friend and bookseller sent me what I desired. He had to pay £30, because all the other dealers to whom I had applied were bidding against him, for me. However, the prize was worth the money. The engraving was in the earliest possible "state," a "proof" before any letters, and had the mark of Sir Thomas Lawrence's collection, and (I think) Romney's monograph.

In reading accounts of sales of engravings I always looked out for Benedetta, but she never appeared in them; clearly she was "very rare." At last, in May of this year, she turned up in a collection sold by an old college frined of mine. She attained the highest price, £672, say $3,300, which looks better. My friend had paid $125. An etching by Méryon, a proof, on greenish paper, brought £75. I have a copy in the same state for which I paid two or three pounds.

The temptation is visible: Am I to sell my engravings for much gold? I think not! I hope not. Besides, at a great, famous sale, people run wild and bid prices which, in cold blood, they shudder to contemplate.

The craze for mezzotints is carried to wild lengths. I had a friend, Mr. John Paget, author of a very amusing book, "Paradoxes and Puzzles," who, when he came to London perhaps fifty years ago, appreciated the mezzotints of the late eighteenth century. Nobody else bestowed a thought on them, so he had the pick of them, and, I think, he never paid

more than half a dollar for one example. But Mr. Theobald's were disposed of at prices ranging from over £600 to over £100. Dr. Johnson, after Reynolds, brought £210; Lady Taylor, £304; Mrs. Curtis, £338; Lady Hamilton, second state, £325; Mrs. Davenport (Romney), £609; Mrs. Payne Galway (Reynolds), £567; Lady Cholmondeley (Hoppner), £546; the Godsall Children (Young), £651. It seems as if some if your Western millionaires had broken loose.

Sometimes, at sales (and nowhere else), a little historical knowledge does no harm. Collectors want to know the names of the persons in miniatures, this knowledge increases their value. I bought cheaply an ornament containing miniatures of a gentleman and lady unnamed. They were, in fact, James VIII and III, and his queen, *née* Sobieska. A day or two ago I saw in a catalog of miniatures one of "A Child in Armor." Children do not often wear armor, still less do they wear the ribbon of the Order of the Garter, as this infant did. I told the clerk at the auction rooms that this infant's name was H. R. H. James Francis Edward Stuart, Prince of Wales, born June 10, 1688,

> "When our white roses do appear,
> To welcome Jamie the Rover."

I had seen a replica, absurdly labeled "Prince Charles Edward," the son of the unfortunate prince actually represented in the miniature.

Genuine collectors, rich men, gather beautiful things, and then, as Monsieur Tyszkiewicz says in his amusing "Memories of an Old Collector," "When my craze for medals had given place to something else, I sold these marvelous works of art." As Mr. Myers sings, so M. Tyszkiewicz says, "Others linger in their loves, but I so soon am weary, and so soon go by."

M. Tyszkiewicz heard of a bronze Hercules in several parts. M. Bonichi had a beautiful bronze leg, Guardabarri had the torso. M. Tyszkiewicz bought the leg (about which Bonichi told a myth), and he swapped a bronze mirror with a Dionysius in relief for the torso. The lower part of the left leg and the foot were reconstructed. Passing thru Foligno, M. Tyszkiewicz saw, in the window of a tobacconist's shop, the missing left leg, and last of all, he finally was presented with the lost club of the Hercules, and now they are all reunited at the Louvre. It is like the search by Isis for the scattered limbs of Osiris.

The great and famous Alessandro Castellani, the dealer, knew all things else, but in the matter of engraved gems was to the last always taken in, not only by artistic imitations of the sixteenth century, but even by very inferior copies of modern days.

Once I bought in a store of cheap, bad jewelry an object, nobody knows what it is. The very highest authorities incline to think it a "Minoan" cameo, far older than Homer. But then others of the very highest authorities assign it to the nineteenth century of our era! They are wrong, I am certain, but what this gem really is I am wholly unable to guess. M. Tyszkiewicz thought that some forgeries of the eighteenth and early nineteenth centuries "are very difficult to detect." But my object is quite unlike them; it represents the lions of the gate at Mycenæ with variations, *and with their heads on;* they are lionesses. The style is not neat and prim, the pillar is "wobbly"; the surface is all that it should be. M. S. Reinach suggested that my object was copied from an inaccurate eighteenth century sketch of the lions, but all the sketches which we could compare were accurate and quite unlike that enigmatic thing.

M. Tyszkiewicz was bitten rather late by the noble passion for Greek engraved gems, and in a few months expended £5,000 on these objects. At least two-thirds of them turned out to be modern imitations. He then sold the lot, at a fourth of his original outlay, to Castellani, who weeded out the *palpable* forgeries, left a large number of doubtful ones, and sold the whole to—the British Museum! He could not do that now, and I suppose that Mr. Newton, Mr. Murray and Sir Cecil Smith have long ago eliminated the trash. But even the Museum may be and has been in error, and I suspect that certain once esteemed terra cotta figures are slinking from their place of pride into regions where no visitor will see their faces any more. The art of forging plausible gems is lost, but in terra cotta figurines *Graecia*

mendax can now deceive the very elect. Gems are the most desirable things on earth, genuine Greek gems, but they are not for the poor collector. A friend of mine did buy a beautiful gem representing a lost Greek statue for half a dollar in the shop of a vendor of old postage stamps, but the good gems are snapped up by millionaires and museums. Dr. Bode had to pay £8,000 for his wax head; he did not make a good bargain!

In the sixties of the nineteenth century, at Rome, the diggers in the vineyards every week disinterred the most beautiful things of all sorts, but the happy times are ended. You cannot now buy a cameo signed by Diodotus in a tobacconist's shop.

Some readers may know Sir John Evan's great cameo of Medusa; it was used as a model for a head of "She" in an edition of Mr. Rider Haggard's novel. The cameo seems to be that which M. Tyszkiewicz had; it was originally sold for a few pence by the peasant finder, who thought that it was a fragment of a Roman *scaldino,* or chafing dish, such as the peasants use. Glorious as is the lot of the American citizen, he cannot find Greek gems and medals in the sacred soil of his native land! But gems, Roman, turn up in our native soil, at Silchester, the site of a Roman town. They are poor relics of the legionaries.

London, England.

Ode

For a College Class Reunion.

BY JAMES HERBERT MORSE

Youth and love and shining eyes—
  Where shall we behold them?
Beauty from the rose replies:
  "See how I unfold them.
Give me but the mood of May,
  Tears and golden sorrow—
Youth and love will ne'er delay:
  There'll be buds tomorrow!"

Comrades, in our joyful prime
  Love was touched with blindness;
Now we know a sadder time,
  Brim the cup with kindness.
Pledge the beauty of intent,
  Noble in its aiming.
Drink to what each brother meant;
  Leave to heaven the blaming.

Hands all round and hearts afire—
  God and country need us—
Pledge we our celestial choir,
  Who, tho seen not, lead us.
They wear yet the mood of May—
  Tears and golden sorrow.
Youth and love will ne'er delay:
  There'll be buds tomorrow.

New York City.

The Teetotaler in the Empire of Beer

BY W. A. AVERILL

[Mr. Averill is one of the exchange teachers now in the German schools. This is a sort of exchange, as at the present time several German teachers are doing similar work in American schools.—EDITOR.]

THE abstainer in Germany is a distinct type of man. He is not what one might call a frequent occurrence. In a city of 150,000, I met four in eight months. These four were not acquainted with one another, but they were enough alike to be described as a class and above all were regarded and treated in precisely the same manner by their countrymen. It is the first impression of the attitude of the "normal" German toward his abstaining brother that I shall describe.

In the first place, the German prohibitionist is certainly a hero. This would be admitted by the hardest American drinker ten minutes after the abstainer's name had been mentioned in any German society. There is a theory afloat in Germany somewhere to the effect that every man has a right to his opinion, and even that the standpoint of the non-drinker should at least be respected, but just where this theory comes into practice is not visible to the naked eye. The heroism consists in being the target for the most thorogoing and caustic abuse and the most supreme contempt of which the German mind and tongue are capable. Perhaps the chief interest, at first sight, lies in the perfection of this vigorous denunciation and the completeness of the social enmity the teetotaler receives rather than any particular characteristics of the man himself. If a political speaker wished to perfect himself in white hot invective oratory, merciless irony, withering sarcasm, blistering scorn, derision, slander or any other form of rhetorical anathema, he would certainly find a rich mine of abusive ore running very high to the ton in the general and often intensely personal remarks directed at the native non-drinker in the Fatherland. In rather surprising contrast, the inclinations of the foreign traveler or resident are rarely commented upon either before his face or behind his back.

Whatever the true feelings of the Germans are on this subject, or whether they are to any degree justifiable or not, they certainly must spring from a source that lies deeper in the German mind than the mere conception of one individual acting differently from his fellows. Such intense feeling as I have seen exhibited surely has sentiment and tradition behind it, whether we approve of that sentiment or honor that tradition or not. It seems to be an existing aversion to an abnormality that prompts the resentment toward the abstainer.

As a result we have in the person of the prohibitionist in Germany a man living at variance with his environment. Naturally, in the larger cities the anti-alcohol movement has made such progress that its adherents can gather occasionally and enjoy themselves according to their lights in peace, but this is decidedly not the case with four in 150,000. The lot of these martyrs is comparative or complete social ostracism from the

"normal" Germans. One poor man, necessarily invited to a weekly session at the tavern, appeared, drank a cup of chocolate, was snubbed with all the keenness of "polite" military German snubbing, and departed in crimson embarrassment never to appear again. This was the usual experience of all four abstainers at the hands of representative men of the best standing in towns of under 200,000 inhabitants.

On the contrary, the German may drink as little as he chooses provided only that he does drink. The quiet consumer of one-half pint of beer is unmolested by his table-companions who imbibe three quarts each evening of their lives. A man at a wine dinner may leave three-fourths of his bottle standing and dilute the one-fourth with soda water till it suffices him from seven o'clock till two in the morning, and nothing will be done, said, or thought about it. But let it once become known or let it once be declared that a German is a total abstainer the whole matter seems at once to assume an entirely different form.

The prohibitionists in Germany take a keen interest in the progress of the movement in America, and most of their tracts are translations of American pamphlets, or are accounts of American "dry" elections. Whatever opinion we have on this question, it is sure that the German "Anti-alkoholiker" is putting up a fight against overwhelming odds, and is at all events a very interesting person in a most perplexing situation.

The March

BY HUGH J. HUGHES

We must keep the pace of the strongest—the terrible stride that kills—
That the goddess smile on our endless ranks as she lures from her golden hills.
Let the weak of body and soul go down—let come what evil comes!
So we lag no step in the terrible march, close to the rolling drums.

Are any too weak to maintain the stride? Pass on! March over! Set
Your heel on the roadway paved with souls! 'Tis only the weak regret!
A thousand blooms must fail in bud that one perfect rose may be;
So a thousand men must fail that one may hold the earth in fee!

We must keep the pace of the strongest—must step as with thews of steel,
Tho the body faint 'neath the racking stride, tho the famished spirit reel,
Tho the days drag on into weary years, the steps into endless miles,
Keep pace! and ho, for the heights beyond where the luring goddess smiles!

We must keep the pace of the strongest—walk close to the rolling drums;
Beat down, pass over, break with the heel whoever before us comes!
Do we sell our souls? *He wins the world who harks to the goddess's cry!*
"Who wins must march!" Keep pace, or else fall out to the rear and die.

Agricultural College, North Dakota.

Literature

Lady Merton

WILL Mrs. Humphry Ward's readers in this country believe when we announce that her last novel is a story of adventure in which train robbers, immigrants, outlaws and murderers figure almost to the exclusion of gentility on some pages? These are the facts, however, and no scatter-brained American author with a pistol-shooting imagination could have chosen a rougher region in which to lay his scenes. We are indebted to the tour Mrs. Ward recently made of this country and of Canada for the story, and it indicates the marvelous expansion of insular mentality under the influence of travel. For years she has laid her scenes in old English houses with bits of tame English landscape showing beautifully thru the windows of the same. Her heroes and heroines have all been chosen from slightly disreputable pages of the blue book of British nobility or from the red book of French nobility, and the time represented has usually been that of the eighteenth and early nineteenth centuries. Two years ago, however, she made a tour of this country and of Canada, and the effect was to be seen at once in her work. For the first time she began to get the material for her romances from life rather than from history. Last year she gave us in "Marriage à la Mode" a sort of guest-note-of-thanks story, very polite, but not very complimentary. In it she disclosed her views of the American woman's position and antiposition in regard to matrimony. But even in this story the American heroine was an incredible composite of different nationalities. This patchwork character drawing has until now been one of the features of her work. And it was evident to her readers here that in spite of her wish to be cordial in return for hospitality, she did not really like us.

But in this book,* for the first time, she turns her back with something very like humorous contempt upon the century plant aristocracy of England and offers new scenes almost untrodden by the foot of man in the Rocky Mountain regions of Canada, and new characters with the pioneer dew of a new nation upon them. Naturally she hangs a lady Englishwoman around the neck of her ruddy Canadian hero. But we cannot expect everything of an author who received her vision of the living West so late in life. She naturally provides one of these insular millstones for her hero or heroine in every story still, apparently to give gentility to the thing. We all know that if she had not married the American heiress to an English gentleman in her novel last year there would have been no divorce scandal. But neither would she have had the opportunity to contrast the stone of time architecture and family portraits of England with the raucous, elaborate, offensive newness of American palaces and with the still more offensive way we have of buying the oldest, best pictures of Europe instead of painting them ourselves. So in this story the pretty millstone is Lady Merton, a beautiful widow belonging to one of the oldest, richest families at home. She comes across with her young invalid brother to travel in Canada, and in the course of the journey meets and falls in love with George Onderson, a young mining engineer born in Manitoba, and now a rising Canadian politician. It is a sort of personally conducted story by the author, and after she travels with the party long enough to show us all the best scenery in Canada, after she has exploited its resources with an enthusiasm that barely misses that of the land agents in its maternal patriotism, after she has taken the party and the reader "back home" long enough to indicate the contrasts between the elegance and stupidity of the old and the strength and virility of the new land and people, Lady Merton marries George Onderson and lives happy ever after as one of the colonists in Canada.

*LADY MERTON, COLONIST. *By Mrs. Humphry Ward.* New York: Doubleday, Page & Co. $1.50.

The attractions of the story consist in the author's unsurpassed gift in describing out-of-door scenery, whether it is an English park or a wild Canadian frontier; and more particularly it consists in the charming warmth with which she gives her heart to the new nation growing there. She raises the question now and then as to the wisdom of the new nation's parodying the history of the old nation. But this is done too delicately to suggest Socialism.

We have but one criticism to make of the story as a story. In it the Montana outlaw and his confederates hold up and rob an ordinary payday train which is just in front of the one carrying the English touring party. If Mrs. Ward had been George Barr McCutcheon or any other American author really used to handling desperate situations in Western Hemisphere fiction, she would have had the robbers shoot holes in the engine drawing the tourist party, snatch Lady Merton's little mildewed lordling brother, carry him off and hold him for a ransom until he at least recovered his health and became a willing goatee of the Rockies.

However, we are unreasonable to expect this sort of enterprise in a writer who has been so long haloed intellectually by the safer, more sentimental adventures of the eighteenth century, where the heroine spent most of her time sitting for her portrait, and the hero spent most of his courting somebody else's wife.

The New Word

THE volume by this title* is an awful warning of the dangers of too much philology. Mr. Upward knows many words in many languages. He is exceedingly clever in the use of them, whether in poetry, in drama or in pseudo-philosophy like this. In his youth he gained gold and silver medals for oratory. In his manhood he devoted himself to the law. To complete this verbal training he has lived among African savages, and perhaps it was from them that he learned to ascribe to words a sort of magical power in themselves. "And lo! the right Name is a mighty spell, and no sooner is it uttered than Verihood herself is called out of her enchanted sleep. . . . Magic lore is this: the secret lies here: I also am a magician." At any rate, he has in some way become obsessed with words, and consequently quite incapable of understanding men of science, who do not care much about what words they use, but have very clear notions about what they mean by them. In fact, he does not try to understand. He only wants to make them appear ridiculous. But it shows how little impression all our science teaching has had in this generation that a man of culture and intelligence should proudly parade his ignorance of the most rudimentary scientific conceptions.

For instance, he objects to "potential energy," and three familiar examples of it, "A clock wound up but not going, a bed of coal and a barrel of gunpowder," he throws out of court with these contemptuous words:

> "I will only remark in passing, first, that there can be no such thing as a clock wound up but not going—the hands may not be going, but assuredly the spring is being worn out in its efforts to move the hands; secondly, that there is no more energy, going or otherwise, in a bed of coal than in a feather bed, or a flower bed, or any other kind of bed—indeed, the flower bed grows the tree that turns into the coal; and thirdly, that there is a far more mysterious energy in a barrel of beer than in a barrel of gunpowder; for the barrel of gunpowder can only blow a man to pieces, whereas the barrel of beer can make him see double.

If this nonsense is not due to ignorance it is due to intentional mystification. It is, of course, false to say that a flower bed possesses the same amount of energy as a bed of coal, or that the tree and coal get their energy from the flower bed.

Such falsifications are common. He disposes of the kinetic theory of gases in this way:

> "I am not a very good elastician, but I am clear of this much, that when two Going Crumbs, sheathed in enchanted mail, meet each other in full career, the speed of each must be doubled by the encounter. . . .
>
> "The result of all this is that, just as real crumbs would gradually slow down and stop, and put an end to the gas in one way, so

*THE NEW WORD. An Open Letter Addressed to the Swedish Academy on the Meaning of the Word "Idealist." *By Allen Upward.* New York: Mitchell Kennerly. $1.50.

these ideal crumbs will gradually quicken their pace till they burst into flame, and put an end to the gas in another way. That is the dilemma, and I will leave science to deal with it."

Science would deal with it very simply by showing that neither the first nor the ast statement is true. If Mr. Upward were as familiar with billiards as he is with bridge he would know that two elastic balls meeting in full career do not recoil with doubled speed. And if the gas molecules should gain speed in this way they could not "burst into flame." The "crumbs sheathed in enchanted mail" are the "perfectly elastic molecules" of the physicist. This is characteristic of Mr. Upward's style of reasoning—or say, rather, of argument —to substitute words of his own, give them a meaning of his own; then he can juggle with them as he pleases, and very prettily he does it, too. Still, there are others who could do that sort of thing as entertainingly as he if their consciences would let them be as regardless of "Verihood."

The conception of potential energy and the kinetic theory of gases are admittedly not altogether satisfactory. Many scientists have tried to invent substitutes, but in vain. Perhaps some day they will succeed in this. We all hope so. But in the meantime the physicist has to put up with them as the best he has, for he cannot get along without them. He needs them in his business, that is, in his thinking. Therefore, were Mr. Upward's criticisms real instead of being for the most part mere verbal quibbles, they would have no effect until something better is provided. Now, when these "Going Crumbs" can actually be caught and counted, one by one, it is a poor time to deny their existence.

Mr. Upward's purpose is apparently to show that physical science is ultimately not materialistic in its conceptions and that it contains more anthropomorphism than is generally suspected. In this he is quite right, but he could have accomplished his purpose much more readily if he had tried to understand what scientists mean. This, however, was very likely impossible to him, for he is an extreme nominalist, and all scientists are pragmatic in their mode of thought.

The Century Dictionary*

THE United States is the land for dictionaries and encyclopedias, even altho the uncompleted Oxford Dictionary and the Encyclopedia Britannica are built on a larger scale than any of the American works. Yet in dictionaries we have the pre-eminence, and the Century Dictionary, with its six quarto volumes devoted to words, and its two additional volumes, one of names and one an atlas, are the most elaborate and complete English dictionary yet published.

But that was issued some fifteen years ago, and it needs additions, for English is the most proliferous of languages. Besides, the more compact rival dictionaries are issuing or have issued new editions. Webster's "New International" is one and the "Standard" will probably follow one of these days. But the "Century," with its eight volumes, simply adds two new volumes, bringing the whole work up to date. The number of words added to the language in the last twenty-five years is enormous, particularly in science and mechanics, but one would hardly have thought that they would require two full volumes of nearly 800 pages each. Not a few words have lately been introduced from Spanish America, the Philippines and Hawaii. Think then of radio-activity—*radium* was not in the earlier volumes—aeronautics, wireless telegraphy, agriculture and forestry, and dozens of other subjects that might be named, each of which has created a multitude of new words, not to speak of new senses of words. Thus these volumes include new words, new meanings of words, new encyclopedic articles—a page on *radium*—new foreign words and phrases, slang words and colloquialisms, simplified spellings, and nearly a hundred pages of additions to the volume of proper names, and with them all a multitude of illustrations.

The editorial work is well done with the aid of a multitude of associated scholars. If we seem to miss anything it is in the line of the later discoveries in Oriental archeology. The current popu-

*THE CENTURY DICTIONARY AND CYCLOPEDIA. A Work of Universal Reference in All Departments of Knowledge, with a New Atlas of the World. Vols. XI and XII, 4to, p. xi, 1467 (for the two volumes), also 92 of Names. New York: Century Company.

lar interest in sport shows itself in that twice as many lines are given to Glenn H. Curtiss, the aviator, as to Governor Hughes, and six times as much to Orville Wright.

The Century Dictionary, when it first appeared, increased the number of words defined by about 120,000, and these two volumes add about 100,000 more, making the total about 550,000. No man can know the half of them, but any scholar is liable to need to know any one of them. We congratulate the publishers on giving us the fullest and most complete combined dictionary and encyclopedia now before the public. Of the original work about 200,000 copies have been sold, and every one knows it, and every private library has it or desires it. We heartily recommend the addition of these two new volumes to those who have the previous volumes, and the entire set to those who have it not.

London at Prayer. By Charles Morley. New York: E. P. Dutton & Co. Pp. x, 341. $2.50.

Mr. Morley gives brief accounts of visits to some twenty places of worship in London. Westminster Abbey, St. Paul's and Westminster Cathedral are among the churches visited, and so are John Wesley's Chapel at Bunhill, and the chief Quaker places of worship at Jordans and Devonshire House. For the rest, Mr. Morley has sought unfrequented places, or rather places frequented only by the poor and by London's great alien and outcast population —places absolutely unknown to the tourist or the visitor to London from the provinces, and unknown also to the vast majority of respectable middle class London. Absolutely catholic in his sympathies, he tells with the same deep brotherly feeling of the work of Roman Catholic fathers, High Church clergy, Jewish rabbis, Presbyterians, Methodists, Salvation Army and settlement workers. It is the tragedy of London given in a series of tableaus, and it is a tragedy well calculated to call forth the emotions of pity and terror, and also of love and admiration, for the heroes who go down into hell to win souls and bodies from those dreadful depths. Perhaps the most interesting of the sketches—tho it is hard to single out any when all are so good—is the one describing the work of Father Bernard Vaughan in the East End. "I for one," writes Mr. Morley of the famous Jesuit priest, whose denunciations of fashionable society have brought him so much notoriety, "had drawn my own portrait of him from rumor and report, and thought of him as a fashionable preacher moving in the drawing-rooms of Mayfair, fluttering the dovecotes now and then, but breathing the perfumed air with pleasure, with ear accustomed to the rustling of silks and satins, the smooth, soft speech, with eye to the flash of jewels, and not disdaining the feast." What Mr. Morley actually found it takes twenty-six pages to tell and not a word is superfluous. He found a man full of love and pity for the poor, idolized by the children, at home in the lowest courts and slums of abysmal London. A man of bold, gallant bearing and humorous kindliness, ready to rebuke, encourage and bless; a kindly host, taking his guest to his clean, bare room and cooking his own dinner on a gas stove—cooking it excellently well, moreover. This priest of the East End and of the West End is doing the work which is most after his own heart in the days each week spent in a parish which holds "twelve thousand of my people, and only two that are earning more than a pound a week, and they're doctors." The poverty of London is probably the chief impression that will be carried away after a reading of Mr. Morley's book. But there is in it also a vast store of information about many historic corners, and the whole history of religious persecutions and of the fight for freedom of conscience is indicated in the hidden chapels and the scarcely to be discovered meeting houses into which Mr. Morley penetrated during his investigation.

Literary Notes

....*The Sunday School Times* has called attention to a rather widespread custom on the part of churches and Sunday schools of reprinting the words and music of copyrighted hymns. The fact of its being done

thoughtlessly by no means deprives it of the infringement of copyright or of the damage inflicted upon the copyright owner. Churches and Sunday schools who do reprinting of this nature render themselves liable to the legal penalties as do individuals, and these penalties are heavy. This is altogether aside from the question of morals involved which has more importance for moral teachers than it has for others.

....The death of O. Henry, the short story writer, last week, makes the following account of how he found his pen name particularly pertinent. When in New Orleans he said to a friend, "I am going to send out some stories. I do not know whether they are any good or not, so I want an alias. Help me pick one." In pursuance of his friend's suggestion, a newspaper was obtained, and in a description of a fashionable ball the name Henry appeared. This was adopted by him together with the initial O as being the easiest of all to make. As at first adopted the writer signed himself "Oliver Henri." This he later changed to the simpler O. Henry. The appeal made by this writer was for the most part thru what are known as the popular magazines rather than those of the highest class.

....If one does not confine his reading to the books of the month or, perhaps, we should say, of the week, he can make his money go a long way in getting the best of literature. One of the most encouraging features of the book trade today is the immense sale of reprints of the classics. The People's Library, published by Cassell & Company, has a record of over 950,000 volumes sold. The list includes more than 120 titles of books that are sure and tried. They are printed in legible type on fair paper and sell at the remarkably low price of 25 cents for cloth and 50 cents for leather binding. Among the recent issues are Kingsley's "Westward Ho!" Browning's "Poems, 1833 to 1865," Walton's "The Compleat Angler," Gaskell's "Cranford," and Dumas's "The Three Musketeers."

....The exactitude of the title of *Lord Kelvin's Early Home* nullifies the criticism that the book contains next to nothing about the childhood of William Thomson, who in later days became Lord Kelvin. The recollections given in these pages were jotted down from time to time in later years by Lord Kelvin's sister, Mrs. Elizabeth King, with no idea of their ultimate publication, but simply for the information of her children and grandchildren. They are now given to the world for what they are worth by one of Mrs. King's daughters, Elizabeth Thomson King, who adds a supplementary chapter dealing with the beginnings of Kelvin's career, and closing with his father's death in 1849. A number of his letters are reprinted, and there are several pictures and portraits. Mrs. King's picture of the family life is a simple, pleasant, peaceful one of a cultured family in the first quarter of the last century. (Macmillan Co., 8vo., $2.60 net.)

Pebbles

"I SEE you only have one chair in the kitchen, Mary. I must get another one for you."

"You needn't mind, ma'am. I have none but gentlemen callers."—*Buffalo Express.*

MR. BLINKS (in art museum)—I didn't know you were such an admirer of curios, Mrs. Blunderby.

Mrs. Blunderby—Oh, yes, indeed; I just delight in iniquities.—*Boston Transcript.*

BIBLIOPHILE (aghast)—I beg your pardon, madam, but that book your little girl is playing with is an old and exceedingly rare first edition.

Caller—Oh, that's all right, Mr. Vibbert. It will amuse her just as much as if it were nice and new.—*Chicago Tribune.*

UNDER the sweltering summer sun he stood in the middle of the blistered street.

"Gone!" he shouted, wildly. "Gone! Gone! Gone!"

Ten strong men emerged from a sheltering awning and offered their sympathy.

"Did your cashier skip with all your funds?" queried one.

"No."

"Wife run away?"

"Nope."

"Lost your watch and pocketbook?"

"Nay! Nay!"

"Then what in thunderation is gone?"

"Why, yesterday, my friends, yesterday. Before today is gone you should take out a life insurance——"

But he got no further. Ten strong and perspiring men took him and dropped him into a horse trough.—*Mystic Times.*

SHE was a charming débutante, and he was a somewhat serious chap. Conversation was rather fitful, so he decided to guide it into literary channels.

"Are you fond of literature?" he asked.

"Passionately," she replied. "I love books dearly."

"Then you must admire Sir Walter Scott," he exclaimed with sudden animation. "Is not his 'Lady of the Lake' exquisite in its flowing grace and poetic imagery? Is it not——"

"It is perfectly lovely," she assented, clasping her hands in ecstasy. "I suppose I have read it a dozen times."

"And Scott's 'Marmion,'" he continued, "with its rugged simplicity and marvelous description."

"It is perfectly grand," she murmured.

"And Scott's 'Peveril of the Peak' and his noble 'Bride of Lammermoor'—where in the English language will you find anything more heroic? You like them, I am sure?"

"I just dote upon them," she replied.

"And Scott's Emulsion?" he continued hastily, for a faint suspicion was beginning to dawn upon him.

"I think," she interrupted rashly, "that it's the best thing he ever wrote."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

California's Repentance

CALIFORNIA repents, and it is to be hoped that she will do works meet for repentance. It is less than twenty years ago that she secured legislation to shut out the Chinese laborers, and the Japanese came in their place. Their coming was resented, and two years ago there began an agitation against the Japanese, especially in the schools, and an agreement was made with Japan, in accordance with which the Japanese Government, for its own advantage and at our request, attempts to divert Japanese emigration to Manchuria, Korea and Formosa.

Now the California Commissioner of Labor, after a careful investigation of labor conditions, has published a long and elaborate report, which argues that the Japanese labor, or something analogous to it, is essential for the preservation—let alone the enlargement—of the agricultural industries of the State. White labor, he says, cannot be had. The Chinese labor has been driven away. The only alternative for Japanese labor is Hindu, and that is not satisfactory nor is it liked. The vineyards, the fruit orchards, the berry farms, the vegetable gardens, must have Japanese or Chinese labor or they must perish.

The reason is that these industries, following the cultivation of cereal grains, require an immense amount of labor at temporary critical times, such as when fruit or berries or grapes have to be gathered. It must be possible to summon laborers for a short period, and this can be done under the evolution of the industries, which has created a system under which Japanese contractors find the labor and send it where it is wanted. It is reasonably cheap, yet not unreasonably so, nearly $1.50 a day, and it goes when the press of work is over. The Commissioner declares that the only way found to get the labor is to import it from abroad. The only objection to Japanese labor is that it is somewhat too independent, too eager to rise, not enough satisfied to be servile, too much like white labor. The Japanese want to become landowners or leasers of land. They will buy poor and cheap land and in a year or two double or treble its value. More than half the labor in these horticultural industries is done by Japanese, of whom there are about 41,000 in the State, 37,000 of them males and 27,800 working in agriculture. They are diligent, cleanly and decent, but ambitious; that is, they are like white people. The report represents the Chinese as preferable, because more content to be servile; but the Chinese can't be had. The Japanese they must have, and they do not wish them excluded or their admission discouraged.

If the report expresses some alarm that California may find it difficult to maintain or enlarge its agricultural industries, on account of the hostile attitude toward Japanese and Chinese immigration, California has only itself to blame. But it is not the responsible, progressive, industrial interests of California that have made the trouble; it is the Sand Lot hoodlums and a certain short-sighted company of city laborers that have frightened and misled Congress and the nation. If California wants to maintain and develop its agricultural pre-eminence, which is more valuable than its gold, then let its producers of wealth be its real rulers. Otherwise they must stew in their own

juice. This report is a sign and promise of coming sanity. Give us more of this sort of sense, and we shall no longer insult the growing powers of Japan and China, and give occasions to boycotts of American products and rumors of war.

The Romanes Lecture

It was because he had been invited to deliver the Romanes lecture, we are told, that Mr. Roosevelt planned to offer, on his return trip from Africa, the series of addresses at great European centers of learning which culminated at Oxford on the 7th inst. The world of ideas is a wider and a stronger world because these addresses have been given. Interesting and noteworthy as were its predecessors, especially the lectures at Paris, at Berlin, and at Cambridge, the Romanes lecture was, as the fitness of things required, more interesting than any of them, and its influence will be more far-reaching and more excellent.

In saying this we are not unaware of adverse criticisms which many of Mr. Roosevelt's admirers have added to unfavorable comments which his detractors have made upon his unhesitating outpourings of opinion and advice. Some of his sincerest friends have felt abashed at what has seemed to them his presumption in analyzing the factors of civilization before the academicians of France, in reviewing universal history before the University of Berlin, and in proclaiming at Oxford the biological foundations of historical science. And his defamers have asked: "Who is this rough rider of Cuba, this ex-president of 'policies' unnumbered, this hunter of African lions, who thus instructs the scholars of the world in things to which they have given lives of research, strenuously impressing upon them the truth and the value of their own conclusions?"

But there is another way of looking at it all, the right way, as we believe, and one which must give profound satisfaction to all who sincerely strive to increase knowledge among men. Science and historical learning have made in a generation more progress than in two thousand years before. A great deal of the new knowledge has percolated from the specialists to the masses—yet an almost appalling ignorance of the reconstructed view of the universe and of human history is still discovered, not only among the uninstructed, but also among supposedly well-educated men, whenever one incidentally alludes in any mixt company to elementary propositions of biology, of historical criticism, or of archeological conclusion. Not only ignorance of these things but prejudice, deep-rooted and valent, still closes legions of minds to the evolutionist explanation of the world. The investigator, the discoverer, on the one hand—the masses of human beings, on the other hand, have been losing mental touch with one another. There has been a real and increasing danger that a gulf would open and widen between science and the common stock of ideas.

To awaken the common mind to the interest and importance of the new knowledge, to compel men to see that it must no longer be ignored, or viewed askance, to make the multitude feel that up to date knowledge is a serious thing, which men of the world must look into and take seriously, was a supremely necessary service. It was a service, however, which no man could render by argument. It could be rendered only by example. It was necessary that a man of affairs, a leader of the people, a popular hero, should show by his own tremendous interest in knowledge that he was alive to its importance, and compelled by his own ardor to proclaim his own enthusiasm for it.

This service Mr. Roosevelt has rendered, and we venture to say that no other living man could have rendered it so effectively. Not tens of thousands, but millions of men will henceforth have a new conception of the world in which they live, of the evolution of human society and of its problems, because Mr. Roosevelt has drawn their attention to it and enabled them to attain it. Just as he organized and focused common opinion upon great questions of public policy, as it had never been focused before in these United States, so now he has fixt the attention of the entire Western World upon the whole vast sweep of modern scientific thought, and compelled recognition of its value.

Let us see things as they are and es-

timate them with some sense of their relations and proportions. Mr. Roosevelt is neither an experimental investigator nor a research scholar. He did not discover the truths that he proclaims. But that the master politician of his generation should reveal himself as also a master of advanced knowledge, and should make himself its sympathetic and awaking interpreter to the people, is a fact unprecedented and reassuring.

"The Boston Common"

ONE hundred and thirty-nine citizens of Boston have supplied the capital to start a weekly paper called *The Boston Common,* six issues of which have now appeared. The purpose of the undertaking is thus stated:

"The motive of the organization is to publish for Boston and New England a weekly journal of politics, industry, letters and criticism, the primary purpose of which is public service rather than private profit, and to secure for this publication absolute freedom from partisanship, sectarianism, prejudice and the control and muzzling of 'influence'."

Each one of the stockholders of the paper must own not less than $100 nor more than $1,000 worth of stock, and each has one vote irrespective of the amount of his holding. The editor is Mr. Livy S. Richard, who resigned from a Rochester (N. Y.) daily rather than support Boss Aldridge in his recent futile attempt to enter Congress. Here we have the first attempt at an endowed newspaper under the control of a non-partisan board of high character and public spirit, and with an editor of proved integrity. The experiment is most opportune. There is no doubt that the American people are profoundly dissatisfied with present journalistic conditions, and so express themselves whenever two or three are gathered together. Private interests, political and financial, are more and more getting control of our papers, and commercialism has begun to cast its blight over the whole profession. The Houghton-Mifflin Company have just published a little volume on "Commercialism and Journalism," by one of the editors of THE INDEPENDENT, which goes into the matter quite frankly and fully. Professor Ross, of the University of Wisconsin; Mr. Porritt, and others have been writing in *The Atlantic Monthly* of the decline of the press and the suppression of news, while the editor of *The St. Louis Mirror* has recently given a most gloomy lecture before the University of Missouri, entitled "The Myth of a Free Press." The reader is referred to these for details that will explain the present slough in which the press finds itself. *The Boston Common* is a practical voice of protest against such conditions. Whether its board, comprising men of diversified interests, can build up a great paper or not remains to be seen. The history of most periodical successes discloses a prevailing military system of management, with a dominating personality at the top. Still, the Boston experiment is hopeful and inspiring, and we welcome the *Common* and wish it all prosperity.

To Protect the Panama Canal

THE able article in THE INDEPENDENT this week, entitled "Neutralize the Panama Canal," by the chairman of the Foreign Relations Committee of the House of Representatives, calls attention to a very important matter. Our army and navy, which naturally wish to emphasize their importance and insure their permanent maintenance, of course want work provided for them at the Canal. We, and the people, long for the time when army and navy shall cease to exist as anything more than a police force of the land and sea; and we are desirous to limit and reduce their service to the vanishing point. It is the reign of peace we seek.

And there are many signs that point to its advent, and one of them is such an article as this by Congressman Foster. Yet in this contention he is not a pioneer, as he shows by instancing the Hay-Pauncefote treaty of 1901. But that is by no means the first or the only treaty by which lands or seas have been neutralized by treaty; nor when we add the treaty mentioned by Mr. Foster neutralizing the Suez Canal have we exhausted the list.

The Hay-Pauncefote treaty copied almost word for word the terms of the Constantinople Convention for the control of the Suez Canal. The difference

is that for the Panama Canal only Great Britain and the United States entered into a convention to secure a free and open canal, undisturbed by war, while for the protection of the Suez Canal all the chief nations of Europe, but not the United States, were parties to the treaty. We have had great wars since the Suez Canal was opened, that between the United States and Spain, and that between Russia and Japan; and the treaty held, and ships of peace and war passed freely thru it. It needs no forts, for it is protected by the agreement of all Europe.

Even before these two canals were made, as far back as 1850, there was the Clayton-Bulwer treaty with Great Britain, when it was proposed to connect the two oceans, a plan delayed by the Civil War. But that treaty equally provided that the canal should "forever be open and free," and further, that neither Great Britain nor the United States should fortify the entrances to the canal. That offers a lesson for us now. Even in case of war between the two nations the canal was still to be open to the fleets of each Power.

So much for the two great canals; but this is only the beginning of the large history of international agreements to neutralize lands or seas. As to seas, in 1856 a general treaty was entered into between all the great Powers of Europe, including Turkey and Russia, for the neutralization of the Black Sea and the Danube River. The Black Sea was interdicted to the flag of war, and no military-maritime arsenal was to be established on its coasts. Very much the same rules were established for the Danube as an international boundary. In 1881 the Argentine Republic and Chile made a similar treaty neutralizing, so far as they were concerned, the Straits of Magellan.

Important as these treaties of neutralization are, they do not compare with those that affect the status of national territories. It is now nearly a century since, in 1815, Austria, France, Great Britain, Prussia and Russia entered into a treaty to "guarantee the perpetual neutrality of Switzerland." They "guaranteed the integrity and inviolability of its territory"; and this guarantee was extended to a portion of Savoy. The result has been the peace and prosperity of Switzerland, which has no forts, no navy, no regular army, only a national militia. It is protected by the united Powers of Europe.

Much like this is the position of Belgium. In 1839, by a convention of the Powers, it was created "an independent and perpetually neutral state," bound also "to observe such neutrality toward all other states." Nevertheless, Belgium maintains strong forts and a moderate army, which costs $12,000,000 a year, but no navy.

We need do little more than mention that similar treaties in 1863 and 1864 gave neutrality to the Ionian Islands of Greece, and as a result the fortifications at Corfu were demolished. In 1867 the Grand Duchy of Luxemburg was made "a perpetually neutral state," and the great fortress was sufficiently demolished to make it an open city. Much more important was the agreement of 1907 to protect the independence and territorial integrity of Norway, followed the next year by an agreement to maintain the *status quo* in all the territories bordering on the Baltic and North Seas. Finally, in 1907, the five Central American republics agreed to respect the neutrality of Honduras.

These cases are sufficient to prove that the policy of neutralization has had no small vogue among the nations. These are all treaties between specified nations, and bind none but the Powers making the treaties. Yet in most cases the Powers involved are such as to make the neutralization effective. In the case of the Panama Canal we believe it would be effective, even altho only the United States and Great Britain are parties to it. Nevertheless it is much to be desired that our nation should make similar treaties of neutralization of the Canal with all other maritime nations. We want no chance that Germany or France or Japan should attempt, in case of war, to close it to commerce or vessels of war. That they would or could do it we do not believe. This Congressman Foster has shown, but even the nominal right to do it should be excluded. Then no excuse could remain to fortify the Canal; no armed force would be asked to pro-

tect it. Fortresses would be excluded, as in Luxemburg and the Ionian Islands, and as in Switzerland and at the Suez Canal. Let us not even prepare for war, but rather prepare for peace.

The Freight Rate Agreement

WHAT has been gained in the public interest by the White House agreement concerning the proposed increases of railroad freight rates? The railroad companies have been induced, or constrained, to submit these increases to the judgment of the Commission, in accordance with provisions of the law soon to be enacted which undoubtedly are approved and demanded by the people. There will be a careful and thoro inquiry. If it can be shown that the railroads are fairly entitled to collect the higher rates they will be authorized to do this. But higher charges are not to be imposed simply by the order of the railroad companies. A tribunal representing all the people—shippers, railroad shareholders and consumers—will decide whether the higher rates are reasonable or not.

The decision cannot be reached within a few weeks, for the investigation will be the most formidable one which the Commission has yet undertaken, and the Commission has not at hand many of the facts to which it should give weight. For example, it has not yet been able to ascertain all of those facts upon which a valuation of the companies' property should be based and which make a clear history of their capitalization and bond issues. Moreover, it has other work to do. Six months may pass before a final judgment can be reached, and during these months the companies will be paying those increased wages which, they assert, are mainly their warrant for insisting upon higher carrying charges. But the record of their recent earnings and dividends proves that this delay will not seriously embarrass them. The people demand that higher rates shall not be exacted until the Commission or some other competent tribunal shall have decided that the increases are reasonable. It is a just demand, and the companies must shape their conduct in accordance with it.

When we consider the methods used on either side in this controversy, it must be said that they have not been wholly commendable. The companies erred in striving to get ahead of the new law. They must have known that those requirements of this law which they sought to avoid were approved by the general public. If they had a good case —and they assert that the arguments in support of the increases are unanswerable—why did they not frankly propose submission of it to the Commission? Their chosen representatives say now that the Commission has their respect and confidence, that they believe it will act wisely and with justice. It would have been safe, therefore, to ask for the Commission's judgment. And they could foresee that the law soon to be enacted would require them to do so.

The methods and acts of the Government deserve criticism. Mr. Taft had recently said that "no one suggested the wisdom of instituting prosecutions under the Anti-Trust law to prevent this practice" of making freight rates by agreement. But he directed that the railroads and their Western Trunk Line Committee be prosecuted for violation of this law. He asked not only for an injunction to restrain the roads from making the proposed higher rates effective, but also for the dissolution of the committee. The Attorney-General, at his direction, asserted in his petition to the court that the committee was an unlawful combination of railroads, that the railroads by means of the committee had "unlawfully conspired and combined" to "suppress competition and to monopolize trade and commerce." At the White House conference he consented to withdraw this suit. "The purpose of it," he said in the statement given to the public, "was to prevent the proposed rate increases."

If the association of the companies by means of the committee was unlawful three weeks ago it is unlawful now. There is as much evidence now of violation of the Sherman act as there was then, and if the President believed that the law had been violated, it was and still is his duty to prosecute. But in the statement issued from the White House nothing was said about a violation of

the Sherman act, and this report of his remarks to the railroad men indicated that while they were advised to withdraw the pending tariffs, they were expected to file them again after the enactment of the new law. But that would be a fresh violation of the anti-Trust statute. In fact, they have since agreed with the Commission to let the tariff notices remain where they are, amending them merely by postponing until August 1 the date when the rates are to become effective. Therefore the offense for which they were prosecuted is a continuing one, practically approved now by the Government.

We think that traffic agreements should be legalized, subject to the Commission's approval. But Congress refuses to legalize them, and under existing statutes they are unlawful. That was the opinion of the President and the Attorney-General when they began to prosecute the Western roads and the Western Trunk Line Committee at St. Louis on the 31st ult. When the suit is withdrawn the law is virtually suspended. It is unfortunate that recognition and support of an important principle in railroad legislation could be obtained only at the cost of some impairment of the dignity and seriousness which should always characterize the policy and acts of the Executive.

It is true that the main question was whether the proposed rates were just and reasonable, and this is a question which, as we said last week, should be considered apart from any alleged violation of the Sherman act and that should be settled in accordance with the facts as they are ascertained by a competent tribunal. Such a settlement is now assured.

The Rivals

It is only a twelvemonth since the New York *Tribune* let William Winter go rather than print its distinguished critic's lampoons and pasquinades ridiculing the grand moguls of the Theatrical Trust. The end of the twelvemonth sees these selfsame stage autocrats shorn of half their power, and, owing to a concerted revolt of many feudatories, a new Trust organized and ready to dispute the monopoly of the old.

For the last twelve or fifteen years the syndicate headed by the Messrs. Klaw & Erlanger had run the theatrical United States. A little over a year ago the Shubert Brothers, a feudatory firm bearing the same relation to the stage czars as did the Nizam of Hyderabad to the Emperor at Delhi, challenged their supremacy. Rumor credits the wealth and acumen back of the New Theater of New York with the remarkable plan of campaign. The theatrical chief had given out a contemptuous, jeering interview belittling the New Theater, the directors of which had appointed Mr. Lee Shubert business manager. "Can nothing be done to stop that fellow's mouth?" asked one of the millionaires. "Yes; money will do it," was the reply. "With the longer purse and careful planning, you can bring the Trust to its knees!"

So with money supplied, the Shuberts started buying theaters, building others, leasing more, making productions, cementing alliances, until in April and May a large number of the more important producers of plays moved bodily into their camp, and a vast majority of playhouse managers in the so-called "night-stand" territory—where the big profits of plays are made after the city runs—declared themselves independent, and for the Shubert policy of the "open door."

Superficially this looks like a notable victory for the cause of theatrical freedom over the shackles of commercialism. Insiders say it means rather a stand-up fight to a finish between rival Trusts—two syndicates now in place of one. The Shubert allies are at least as compactly organized as the old Trust. In many of the new productions to be made the allies will be business partners, and there is much community of interest visible in their proprietorship of theaters and plays.

On the other hand the old Trust is lively and combative. With the fortune accumulated during fifteen years of golden harvest, it has entered into extensive plans of buying or building theaters in towns captured by the opposition, of making many large productions, and of concentrating its forces for the fray. In actual value, if not in numbers, it probably still controls 50 per cent. of the country's theatricals. Each side will

offer about one hundred first-class "attractions" (*i. e.*, plays and stars) next season. A keen competitive war is the cheerful prospect, but a war of Trusts, by no means the old helter-skelter competition of the days before the combinations of plays, railroads, meat packers and iron kings.

The only way to ensure "free" theaters nowadays is to make them free, as libraries, museums, parks of zoology and botany are free. Directly the value of the worthy acted drama is appreciated by thinking people, a public movement will develop to make the stage an instrument of culture rather than the sport of commerce. A Carnegie of the theaters, thru judicious endowment of cultural amusements, would confer large benefit and win renown like the Carnegie of the libraries.

In the meantime municipal theater experiments seem distinctly worth while. Northampton, Mass., has pointed the way. There the local theater, conducted by the city, is open to the best plays and companies, but its doors are inexorably shut to doubtful amusements. And an amazing amount of local aptitude for local theatricals is yearly coming to light in the increasing number of historic pageants and spectacles which municipal self-consciousness is developing. With half the skill and energy expended in the engineering of a theatrical trust, these various movements could be so fostered and encouraged to establish real dramatic centers in each of the important towns. Under such conditions—say part endowment, part subscription, possibly also subvention from the municipal budget—the City Theater might well prove as significant an element of civic life as it was to the Athenian who wept with Æschylus and Sophocles or laughed with Aristophanes and Menander.

The Fishery Arbitration at The Hague

We receive by mail the official account of the opening before the Tribunal of The Hague of the arbitration proceedings on the century-old dispute between the United States and Great Britain over fishery rights along the Newfoundland coast. At the first session the president of the tribunal, Professor Lammasch, of the University of Vienna, exprest with peculiar felicity the dignity of the occasion, as well as the indebtedness of the world and the cause of peace to the two nations which have again and again referred their difficulties to arbitration and now to this august world court. There runs thru his address the idea of progress toward a permanent and truly judicial tribunal, and the high conception of the judicial function which is to be performed by this court, as distinguished from the ordinary diplomatic ideas of ordinary arbitral tribunals. He said:

"Be assured, gentlemen representing the litigant parties, that all our arbitrators are imbued with the sense of our responsibility not only to the Governments which honored us with their confidence and to the two great nations which they represent, but also to the noble idea of arbitration, so dear to all of us."

He then anticipates most properly that "the award we have to pronounce will, by the force of its motives, meet with the approval of all who, by their unbiased knowledge of international law, are entitled to criticise us," and he adds:

"Every sentence rendered by this Court ought to be by virtue of its impartiality and equity a new marble pillar to sustain the ideal palace of Justice and Peace, the symbol of which is to be that noble edifice which has been dedicated to this term by the munificence of a man whose name is dear to both ligitant nations."

The five members of the tribunal are distinguished jurists of the world, including two American and one Canadian, and the case is defended on one side by Senator Root and five assistant counsel, and on the British side by Sir William S. Robson, His Majesty's Attorney-General, and ten counsel. The dispute is one which in years past has almost led to war, and its decision will be the greatest triumph of arbitration since the stablishment of the court ten years ago.

Chancellor Day

Chancellor Day, of Syracuse University, rides a wild mustang. Most college and university presidents move with a certain dignity, but not so Chancellor Day. But he seems to have a provocation, for he tells us his university has missed two million dollars which it wanted. Hear him in his annual report to the trustees:

"We believe that but for the insane assaults

upon the commerce of the country, upon railways and manufactures, from which there are small signs of immediate relief, as the politicians do not seem to have discovered any other issue of equal demagogic effect, we would be able to report a couple of millions more of increase in our endowments.

"The present aspect is not flattering. No one can tell what insurgent cranks will be able to inject their wild-eyed socialistic theories into the business of the country by Congressional act."

Let his altruistic soul be mollified by the fact that if Syracuse University has lost her elusive millions Princeton has got hers. We gather that he will not join the paraders to welcome back Mr. Roosevelt. He is nearly as severe against the Carnegie Foundation Fund, which helps with its pensions other institutions but not Syracuse. What is the matter? He says:

"Wesleyan University, more denominational than we ever have been, has been placed upon the Foundation! We have been told that we could not be accepted because we were generally known to be a Methodist university. Is Wesleyan not so? Hobart an Episcopalian college; Oberlin distinctly Congregationalist; Rochester Baptist, are all on this Foundation. . . .

"There has been nothing more comical or that is greater farcical burlesque since the Puritans burned and hanged their fellow mortals for differing with them in religious opinion."

If Syracuse wishes to get the advantage of that fund it should meet the conditions, and add rhetorical and historical restraint, for example, as to the burning of witches by the Puritans.

Roosevelt's German Diploma

All the official data and details dealing with ex-President Roosevelt's lecture in Berlin and his philosophical doctorate are published in the *Internationale Wochenschrift,* of Berlin. No. 20 contains the address of the lecturer in full in an official translation made by the Berlin representative of the New York *Staats-Zeitung.* No. 21 contains the official addresses of the rector of the university, Prof. Erich Schmidt, and of the dean of the philosophical faculty, Prof. Gustav Rothe, together with a reproduction of the Latin diploma. The contents of the latter are interesting and show that his Berlin friends know something about the Colonel's achievements. This document reads as follows:

Quod felix faustumque sit
auspiciis laetissimis et saluberrimis
serenissimi ac potentissimi principis
Gulielmi II
imperatoris Germanorum
Borussiae regis
Rectore Magnifico
Erico Schmidt
ex decreto unanimo ordinis amplissimi
philosophorum
promotor legitime constitutus
Gustavus Roethe
ordinis philosophorum h. t. decano
Theodoro Roosevelt
qui oriundus ab atavis Rheni effluentis accolis
eruditus Americanis Germanisque scholis
universitatis dein Harvardensis decus
patriae suae non modo regiones et animalia
ut pastor strenuus venatorque audax
scienter simul et venuste descripsit
sed etiam instituta, mores, heroas
ut judex integer et civis bonus
ad historiae veritatem vitaeque utilitatem
egregio stilo illustravit
equiti duro fortiter in hostes, fortius in
improbos cives invicto
viro justo, propositi tenaci, veritatis ideoque

Unionis Americanae nuper praesidi intra et
extra patriam laudatissimo
philosophiae doctoris et artium liberalium
magistri
dignitatem et ornamenta
die XII m. Maii MCMX
honoris causa contulit.

A Decision of the Biblical Commission

We can imagine that there may be a certain degree of comfort in belonging to an organization like an army in which one does not have to settle anything because it is settled for him by superior authority. That advantage is given to those who must accept their religious beliefs from such a source as the Papal Biblical Commission. After having decided that Moses wrote the Pentateuch and that the "Three Witnesses" passage is genuine, and other decisions of similar value, it has now tackled the questions relating to the authorship and date of the Psalms. The decision is too long to quote, but it covers eight points. The Commission, first, allows us to believe that David did not write all the Psalms, notwithstanding the title "Psalms of David"; but tells us one cannot prudently call in question the titles of individual psalms unless there

is grave argument against their genuineness. Nor "can it be prudently denied that David is the principal author of the Psalms, nor can it be affirmed that only a few of them are to be attributed to him." Further, it must not be denied that those Psalms which in the Old and New Testament are expressly cited as by him, such as Ps. 2, 15, 17, 31, 68 and 109, are by David. While it may be admitted that for liturgical reason some Psalms may have been divided, united, or slightly revised, it cannot with probability be maintained that not a few of the Psalms were composed after the time of Ezra and Nehemiah or even of the Maccabees. Finally, the prophetic value of the Messianic Psalms must not be denied, and those are in error "who pervert the prophetic and Messianic character of the Psalms, and twist these same prophecies regarding Christ into a mere prediction as to the future lot of the chosen people." Rome has spoken, and hereafter professors in seminaries will not need to study these problems. But for outsiders it would be agreeable to know the conclusive evidence on which the Commission relied.

Goldwin Smith

We give on another page an appreciative review of the life and services of one of the most versatile and useful men that have ever served the intelligence of Greater Britain and the United States. Goldwin Smith left the leading English university to nurse an infant American university. When he left it to make his home in Canada he became the monitor of both peoples and of the world. He did not confine himself to writing vast, dry tomes that should lie forever on library shelves, but he knew the value to the common people of their common medium of instruction, the newspaper and the magazine. He was a much valued contributor to THE INDEPENDENT and to numerous other dailies and weeklies. He had an independent mind, believed in a world union, and particularly in a continental union. He thought much and reverently on religion, his agnosticism bordering on faith and gazing hopefully on the future life. One who loved his fellow men and served them with unusual wisdom, his memory will be held dear not merely to scholars, but to humanity.

An International Marriage

Count Boni de Castellane has applied to the Vatican to have his marriage with Miss Anna Gould declared null and void. His reason—that Miss Gould had the intention of getting a divorce when she saw fit—is good canon law. The Count is silent as to whether her intention was explicit or merely implicit, viz., the result of her training and education. If the Vatican annuls the Castellane-Gould marriage, the way lies open for the Sagans to receive the Papal blessing on their union. In Parisian swelldom marriage in the Church with her blessing on the union is a condition *sine quâ non* of the correct thing to do. That would leave Count Boni free to seek another American heiress. It would please the Sagans if Mme. Gould's first husband could induce the Vatican to annul the former marriage.

In Spain Republicans can be elected to the national Parliament; six of them now sit from Madrid. But in Prussia the utterance of republicanism is not allowed. In the Prussian Diet, when the proposition was before the House to increase the civil allowance of the King of Prussia by $500,000, with $375,000 more for the royal theater, a Socialist deputy, after declaring that the King who told the people to economize ought not himself to live luxuriously, added that all state servants, even the chief, ought to be elected. Thereupon he was called to order for uttering "sentiments of high treason." Under our Constitution treason is defined as "levying war against the United States or adhering to their enemies, giving them aid and comfort." An expression in favor of elective rule is not treason, high treason or even constructive treason. But a "*sentiment* of treason"—that is past human scrutiny. A republican Socialist may or may not wish to secure his ends by war against the nation.

It was a shocking thing—oh, so "untactful"—in Mr. Roosevelt to meddle

with Egyptian matters! Did he not know, so Mr. Hearst hurried to cry from Paris, that this was a political question with which no stranger should intermeddle; and Mr. Bryan said he never could have done so rude a thing. They who were not estopped by the fact that Mr. Roosevelt had conferred freely with Sir Eldon Gorst in Cairo, have something to mull over in the fact that our ex-President's last and most intimate interviews before leaving England were with his host, Sir Edward Grey, British Foreign Secretary, who took no more offense than did Mr. Balfour. Mr. Roosevelt knew what he was about.

We were glad for the Southern Methodist Church, but sorry for Trinity College, Durham, N. C., that President Kilgo was elected bishop. Trinity College, and the *South Atlantic Quarterly,* edited there, are among the most progressive influences in the South. Prof. William P. Few, dean of the college and one of the editors of the *Quarterly,* has been elected president to succeed President Kilgo. He is a native of South Carolina, a doctor of philosophy of Harvard, and a frequent and forceful speaker and writer on educational topics. His administration begins under most favorable auspices, with new buildings being erected, and an additional gift of $100,000 from Mr. B. N. Duke.

Mr. Procter, of Cincinnati, renews his offer of $500,000 for the post-graduate department of Princeton University, on condition that as much more is raised by the alumni; but he offers it with the previous conditions as to the site at a distance from the present buildings. Now it will be accepted by the trustees, without objection from President Wilson. A million was not enough to overcome the objection that the plan is not democratic, but the three millions or more of the Wyman bequest is too much to be rejected; and, besides, the buildings it will require could not be erected on the present campus.

Atlanta is a "dry"city; but it must not be supposed that its bibulous citizens intend to go without their alcohol. The Atlanta *Constitution* filled nearly three columns of its issue of June 1 with over one hundred notifications of saloonkeepers that they would make applications to the City Council for the privilege to sell "near beer." We learn from Atlanta residents that this "near beer" is not "near" by being less but more alcoholic than the ordinary beer. We know that it is forbidden in the army canteens because of its pernicious effects.

Another setback for muckraking has been the result, as foreshadowed, of the investigation had for nearly six months of a very patient and careful grand jury of the charges of prevalent white slavery in New York and other American cities. Nothing of the sort has been found, only the common, vulgar prostitution. The story as told by George Kibbe Turner was shocking enough to be as sensational as desired, and it is some satisfaction to know that it is not sustained by evidence.

Archbishop Farley, of New York, celebrated last Saturday the fortieth anniversary of his ordination. He took pains to let it be known that the Church is patriotic. The chimes played the "Star Spangled Banner," and the national flag was unfurled between the two towers of the Cathedral, on the See-house, the Cathedral Rectory and the training school for priests; and nowhere was the Papal flag of orange and white to be seen either within or without the Cathedral.

There was an accident the other day, when a passenger car jumped the track, bumped a few seconds, and then turned over. Nobody was hurt, because an official immediately called out, "Hold on tight!" They held on tight and saved their bones. That is good advice in time of accident or other troubles.

Arkansas goes back on Senator Jefferson Davis, and he is not likely to be re-elected at the end of his term. At the same time Senator Tillman will retire for reasons of health. The world is growing better, and so is the Senate.

INSURANCE

What Is an Adequate Life Insurance?

The attitude toward life insurance today is very different from that which obtained a few years ago. Then life insurance was frequently regarded as tempting Providence. Now it is looked upon as the most ordinary safeguarding of the family. The question of insurance is one that has more and more consideration. When the question as to what kind of a policy to select has been settled there is the question as to what is an adequate life insurance? How much insurance should a man carry? It goes without saying that every man is worth a certain definite sum to his family. If his income is $1,000 he is worth that sum to his family minus what he expends for personal expenses. If his income is $50,000 he is of course worth the larger amount with the same deduction. As we pointed out in our issue of July 18, 1907, a man at age twenty-five, with an expectation of life in round numbers of thirty-nine years, has an insurable value of $19,584. This is gradually decreased thru the intervening years until at age sixty, with but fourten years of expectation, he has reduced his insurable value to $10,563. An adequate life insurance is easily calculable. Let us suppose that a man's income is $1,500 per annum. For personal expenses and as his share of the family expenses he uses $600 each year. This leaves $900 per year that comes to his family thru his agency. An adequate insurance therefore would be a policy having as its face a sum which would produce an income of that amount. A policy for $22,500 at maturity, if placed in a savings bank at 4 per cent., would yield $900 per anum and would therefore be an adequate insurance on such a basis. Many men are not fully insured because they do not approach the subject with adequate thought. If insurance is a good thing it certainly is worth a little thought. The kind of a policy that ought to be issued was considered in this department on June 9.

In our issue of March 8, 1906, we published in this department a striking card in which it was shown that the habit of saving must be formed and exercised early in life. In this connection it may be said that if a man is poor at age sixty the chances are that he will remain so until the end of life. Thrift is not a matter of sudden caprice or resolution but signifies, generally speaking, line upon line and precept upon precept along the line of financial conservatism. Many of the so-called lower animals set us bright and shining examples which the young man may well take into consideration. If by imitating an ant, or a bee, or a squirrel in the matter of thrift a man's declining years are made easier and happier, by all means let us take a leaf or two out of the animal's book. The man or the woman who neglects to provide for the future will have a very rude awakening when such an experience will come the hardest. The United States Census shows, however, that nine-tenths of its population are poor at sixty when the active earning power usually terminates. Old age comes creeping on and no one of us may escape it. The part of prudence is therefore to take time by the forelock, make use of the insurance principle, and thus by means of the thrift it signifies to escape the cruel rocks that will otherwise be sure to spell shipwreck for the neglectful. Do you want to be helpless and dependent upon others when you are sixty? No? Then remember and apply the analogy of the proverb "in time of war prepare for peace."

The rise and progress of the navigation of the air has at last obliged the insurance companies to take cognizance of it. The New York Life Insurance Company, for example, has recently canceled a policy it held on the life of an air navigator who was engaged in making experiments at Hammondsport. The policyholder had narrowly escaped death not very long since when he crashed to the ground from a hight of 30 feet. The company took the ground that when the policy was written the risks incurred in aviation were not contemplated, and therefore they insisted upon a release from liability in case of death while the policyholder was engaged in flying machine flights.

Financial

Better Promise of Crops

Crop prospects are much better now than they were a month ago. The Government's June report shows that the spring wheat increase of acreage is 1,349,000 acres, or 7.3 per cent., and that the condition, 92.8, is only a shade below the ten years average. The figures, according to the statistician of the New York Produce Exchange, indicate a yield of 278,362,000 bushels, against last year's harvest of 290,823,000. Winter wheat's condition has declined since May 1, and is nearly 2 points below the ten years average, but the area exceeds that of last year, and a yield of 424,042,000 bushels is indicated. These estimates point to a total of 702,404,000 (against last year's harvest of 737,189,000), which has been surpassed in only three years. The Chicago Board of Trade sees a promise of about 25,000,000 more, or 727,225,000 bushels. Its estimate of the oats crop is also higher than that of the Produce Exchange. An increase of 3½ per cent. in seeded area, with a condition of 91 (against a ten years average of 88.4), indicates in New York 1,021,086,000 bushels. The Board of Trade says 1,126,000,000. It should be added that the rye crop promises to exceed last year's by 3,000,000 bushels, and that there will probably be 8,000,000 bushels more of barley.

The Stock Market

Following the announcement of the Government's suit against the Western railroads, stocks declined, the losses of the most active securities week before last ranging from 6 to 13 points. At the beginning of last week there were additional losses, but on the morning of the 7th, the news of the White House agreement caused a sharp rally. A large "short" interest, surprised by what had taken place, hastened to protect itself. During the remainder of the week, however, the market was comparatively dull, and a decline on Saturday left small gains for the week for a majority of the stocks in which the greater part of the Exchange's business has recently been done. Crop reports, both for cereals and for cotton, should have exercised a favorable influence, but the situation is controlled by railway conditions. It is seen that five or six months must elapse before a final decision concerning the proposed increase of freight rates can be reached, and the nature of the decision cannot be predicted with certainty. In the meantime the companies are paying the higher wages, awards in several cases having been dated back to April 1. Capitalist speculators and investors also are inclined to wait at least until the adjournment of Congress.

....The value of Canada's crops in 1909 was $532,932,100, an increase of about $100,000,000 over the value in 1908.

....Officers of the Department of Justice say they expect to suppress completely the bucketshop business thruout the United States.

....Recent purchases, it is understood, have given to the Southern Pacific possession of all the stock of the Los Angeles Pacific Company, which operates about 200 miles of electric lines in Southern California.

....May's pig iron output was 2,390,180 tons, against 2,483,763 in April, and 2,617,949 in March. The restriction of production has not prevented an increase of stocks on hand. Prices are not rising, altho the freight rate agreement, followed by a renewal of canceled railway orders, has improved the tone of the market.

....The approaching consolidation of the Continental National and the Commercial National will give Chicago one of the greatest banks in the United States. On August 1 the merger will be completed. The new Continental-Commercial Bank will have a capital of $20,000,000, surplus and undivided profits amounting to about $9,000,000, and $184,443,000 of deposits. George M. Reynolds will be president. He is now president of the Continental.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JUNE 23, 1910 No. 3212

Survey of the World

Mr. Roosevelt in New York

Returning from Africa and Europe, Mr. Roosevelt was welcomed in New York on the 18th with remarkable expressions of affection and admiration. He was in perfect health, and it could be seen that he most heartily enjoyed his warm reception. During his voyage he had received many wireless messages, so many that it was impossible to answer them. On the 17th he sent for publication a brief statement. He had been away, he said, for a year and a quarter. While he had enjoyed Africa most, he had enjoyed Europe a great deal, and he wished to express his deep appreciation of the more than generous courtesy and hospitality of the people and rulers of the countries thru which he had passed. Still, he was very glad to get home. He should not speak in public for more than two months, and his first address would be at the John Brown celebration in Kansas City:

"I shall have nothing whatever to say in the immediate future about politics, and will hold no interview whatever on the subject with any one; and anything purporting to be an interview with me that may appear can be set down at once as invention."

On the morning of the 18th, the steamship "Kaiserin Auguste Victoria," bearing him and several members of his family, was escorted from the harbor's entrance to the vicinity of the Quarantine station by the battleship "South Carolina" and five torpedo boat destroyers. When the Health Officer boarded the steamship he was accompanied by Captain Butt (representing the President), Senator Lodge, Secretary Wilson and Congressman Longworth. Leaving the steamship, Mr. Roosevelt was for a time on a revenue cutter. He was then transferred to the "Androscoggin," a boat carrying the reception committee of 300 men, led by Cornelius Vanderbilt Fort Wadsworth gave the returning ex-President a salute of twenty-one guns. The "Androscoggin" led a naval parade up the Hudson to Fifty-ninth street and back to the Battery. Mr. Roosevelt was vigorously shaking hands with all on board, recalling for nearly every one some incident of old acquaintance. Landing at the Battery (where 100,000 people were assembled), he was greeted by Mayor Gaynor, who said:

"We are all here to welcome Mr. Roosevelt home to New York. We have watched his progress thru Europe with delight. Everywhere he has gone he has been honored as a man and as an exponent of the principles of the Government of this country. He was received everywhere in Europe and honored, as no man from this country ever was honored. We glory in all that, and it only remains for me to say now, Mr. Roosevelt, that we welcome you home most heartily and we are glad to see you again."

Replying, Mr. Roosevelt said he was most deeply moved by the reception. No man could be so greeted without being made to feel both very proud and very humble:

"I have been away a year and a quarter from America, and I have seen strange and interesting things alike in the heart of the frowning wilderness and in the capitals of the mightiest and most highly polished of civilized nations. I have thoroughly enjoyed myself, and now I am more glad than I can say to get home, to be back in my own country, back among people I love. And I am ready and eager to do my part so far as I am able in helping solve problems which must be solved if we of this the greatest democratic Republic upon which the sun has ever shone are to see its destinies rise to the high level of our hopes and its opportunities.

"This is the duty of every citizen, but it is peculiarly my duty, for any man who has ever

been honored by being made President of the United States is thereby forever after rendered the debtor of the American people, and is bound thruout his life to remember this as his prime obligation and in private life as much as in public life so to carry himself that the American people may never have cause to feel regret that once they placed him at their head."

The exercises at the Battery consumed only ten minutes. Then the parade began. Escorted by mounted police, Rough Riders, bands and several thousand Spanish War veterans (with whom were the two little sons of Jack Abernathy), Mr. Roosevelt passed up Broadway and Fifth avenue to Fifty-ninth street. With him in his carriage were the Mayor and Mr. Vanderbilt. In other carriages were Secretaries Meyer and Wilson, Senator Lodge, ex-Secretary Garfield and the Governors of four States. Places had been assigned for 32,000 members of civic societies. Buildings along the route were finely decorated. The greeting to Mr. Roosevelt was enthusiastic. He was almost continually responding with bows and the lifted hat. It is estimated that more than one million people saw him from the sidewalks and buildings. After lunch he started for his home in Oyster Bay. There he was welcomed in an address by District Attorney Youngs, and in reply he spoke with much feeling of the friendship of the people around his home.

MR. ROOSEVELT ACKNOWLEDGING GREETING.
Mayor Gaynor and Mr. Vanderbilt seated in the carriage.

No Prize Fight in California

Unexpectedly, on the 15th, Governor Gillett, of California, decided that the projected prize fight between Jeffries and Johnson must not take place in his State. In a long letter to Attorney-General Webb, arguing that prize fighting was a felony under the laws of California (altho sparring exhibitions are lawful) he directed that application be made to the courts for an injunction and that, if one should not be granted, steps be taken for the prosecution and punishment of the principals and pro-

moters of the fight. He quoted from published reports of similar fights in California to show their brutal character, pointing also to the mortal injuries received on April 30 by a prize-fighter named McCarthy. "The whole business," said he, "is demoralizing to the youth of the State, it corrupts public morals, is offensive to the senses of a great majority of our citizens, and should be abated as a public nuisance." He also directed that the proposed fight between Kaufmann and Langford, advertised for the 18th, be prevented. San Francisco's district attorney, Mr. Fickert, commented with bitterness upon the action of the Governor, saying that the latter had yielded to the "clamor of the mob." At the recent election Fickert was chosen in preference to Francis J. Heney, the noted prosecutor. Mayor McCarthy also was angry. Said he: 'I'm running San Francisco, and I take no orders from the Governor or his Attorney-General. You can bet that the fight will be pulled off in my town as advertised." But the promoters of the fight, taking advice of counsel, decided to surrender at once and to look for another place. Utah was closed, owing to the attitude of the Governor of that State, but there were invitations from Nevada, where there is no law against prize fights. In that State a license is granted for a fee of $1,000, and the fighters then enjoy the protection of the police. Large sums were offered by both Goldfield and Reno, and one of these cities will probably be chosen. Attorney-General Webb failed to get an injunction against the Kaufmann-Langford fight. Whereupon Governor Gillett called out two companies of militia. But they were not needed, for the Chief of Police promised to prevent the fight. The services of the police, however, were not required. In deciding to prevent the Jeffries-Johnson fight, the Governor was moved by a telegram sent to the president of the San Francisco Board of Trade by Congressman William S. Bennet, of New York, saying that if the fight should take place in San Francisco, that city would have to give up all hope of having the World's Fair in 1915. Mr. Bennet is a member of the committee which was considering the claims of San Francisco and New Orleans. It is not expected that final action will be taken at this session. The Governor may also have been moved by the numerous protests addressed to him by churches and other religious organizations.

Prosecution of Trusts

Several suits under the Sherman Anti-Trust law were begun last week by the Government. At Birmingham, Ala., the courts were asked to dissolve the Southern Wholesale Grocers' Association, which, it is alleged, is a combination that has raised prices, coerced manufacturers and opprest merchants who were not members of it. At Cleveland, Ohio, a similar suit was brought against the Great Lakes Towing Company. The Government says that this corporation, which has a capital of $10,000,000 and which operates tugboats and lighters on the lakes from Buffalo to Duluth, controls the industry, so monopolizes it that there is no opportunity for competition, and by oppressive methods is driving out of business the few competitors remaining.——By direction of Attorney-General Wickersham, a civil suit has been begun in Chicago for the dissolution of the Butter and Egg Board, a corporation of one hundred dealers which determines prices for the East as well as for the Middle West. The Government asserts that the board is a conspiracy in restraint of trade, that it publishes fictitious prices below the real market, and that in this way its members, buying at higher rates, have an advantage over other dealers. ——In a suit against the Union Stock Yards Company, of Chicago, and several short railroad lines connected with that company, the Government alleges that the railroad laws have been violated by the payment of rebates and in other ways.——It is understood that the Department of Justice is collecting evidence against what is called the Bathtub Trust. It is alleged that a combination of sixteen manufacturers exists, that it controls 95 per cent. of the output of sanitary enameled iron ware, and that it has recently made a large increase of prices.——The House Judiciary Committee has reported favorably, and the

House has adopted, the resolution of Representative Stanley, of Kentucky, asking the Attorney-General for the information in his possession tending to show whether the Carnegie Steel Company and the other constituent companies of the Steel Corporation are an unlawful combination under the Sherman act. Mr. Stanley was moved to introduce the resolution by a remark recently attributed to Chairman Gary that investigation by Attorney-General Wickersham and his predecessor had shown that the Steel Corporation was unassailable.——By the decision of Secretary MacVeagh, Richard Parr, the customs employee who discovered the device by which the Sugar Trust robbed the Government of at least $2,000,000, receives a reward of $100,000.

National Legislation

The bill providing for the admission of New Mexico and Arizona as separate States was passed in the Senate on the 16th by unanimous vote. Two days later, the House accepted this bill, which is now a law. It requires that the new Constitutions of the two States shall be ratified by Congress and approved by the President. As constitutional conventions must be held and the Constitutions submitted to the people, a year may pass before the two Territories become States. ——The conference report upon the Railroad bill was accepted in the Senate on the 17th by a vote of 50 to 11, all of those in the negative being Democrats. It was accepted in the House on the following day by unanimous vote, and the President promptly signed it. The provisions of the new law are considered in our editorial pages.——The conservation bill, authorizing the President to withdraw from settlement public lands, was passed in the Senate on the 15th substantially in the form of the House bill, except that the Senate added a paragraph authorizing an issue of $30,000,000 of certificates of indebtedness for the completion of existing reclamation projects. In conference there was difficulty about this addition. In order that the question concerning reclamation certificates might stand by itself, the House Ways and Means Committee reported a separate bill, but reduced the amount to $20,000,000. During the debate in the Senate, Mr. Heyburn remarked that Gifford Pinchot was "an apostle of fallacy, theory and ignorance" who had got foreign ideas in Europe; also that there had been heavy drafts on the Treasury "to create game preserves and solitude."——Speaking at St. Paul last week, ex-Secretary Garfield said that the chief opposition to conservation came from men who had been prevented from doing wrong, from "stealing coal and timber and water power."

Cases of Bribery and Fraud

An investigation concerning the election of Senator Lorimer, of Illinois, will be made by the Senate during the recess. At the trial in Chicago, last week, of Lee O'Neil Browne, leader of the Democratic minority in the Legislature, Representatives White and Beckemeyer repeated their confessions relating to the payment of money to them by Browne for their votes in favor of Lorimer.——Following the official inquiry at Schenectady, N. Y., ex-Supervisor Aaron P. Huffmire, George N. Pepper, formerly superintendent of roads, and Dr. Vanderberg, formerly superintendent of construction and repairs, have been convicted of defrauding the county by false bills or forged signatures. The amounts involved are small. ——A committee appointed by Mayor Gaynor, of New York, reports that the management of the *City Record*, the city's printing and advertising, and the purchase of supplies have been characterized by "waste and larceny"; also that $410,000 a year can be saved by honesty and economy. Obscure weekly papers were paid 40 cents a line for advertisements, and they paid from one-quarter to one-half of their receipts to one Foster, "an unofficial attaché of the Mayor's office." This was in Mayor McClellan's term. It is said that it became profitable to start a weekly in an outlying borough for the city advertising alone. Contracts for printing are called "a farce," and the committee points to combinations of bidders for supplies.——Peter G. Thompson, the millionaire pres-

ident of a paper manufacturing company in Hamilton, Ohio, has been indicted at Washington for attempting to bribe Postal Card Inspector Zantzinger at the Government Printing Office and thus to induce him to accept postal card paper of inferior quality.——It is said that a new Anti-Graft Association will soon open an office in Washington, and that funds for its work have been provided by Rudolph Spreckels, Perry Belmont and others.

The Islands

Representative Martin, of Colorado, has introduced in the House a resolution for an investigation concerning the leasing or sale of friar estate lands in the Philippines to Executive Secretary Carpenter and a nephew of Commissioner Worcester. He will resign, he says, if he does not prove malfeasance in office. ——The bill relating to the government of Porto Rico was passed, last week, in the House. It provides for a House of thirteen members, eight of whom are to be appointed, but the number elected is to be gradually increased. Six new executive departments—Justice, Finance, Audit, Interior, Education and Health—are created. An eight-hour day in public work is required, and the employment of children under fourteen in occupations of a hazardous character is prohibited.——The House, at Washington, has increased from $100,000 to $300,000 the appropriation for raising or removing the wreck of the battleship "Maine." It was pointed out in debate that $100,000 might be enough if the wreck were to be broken up by blasting, but it was asserted that the American people desired that the wreck be raised.——The Cuban Senate recently passed a bill authorizing an exchange of the arsenal grounds on the waterfront for the site of the terminal of the United Railways. This was recommended by President Gomez, but opposed by the Washington Government partly because it involved a loan of several millions, to be expended for public buildings. In the Cuban House, last week, action upon the bill was indefinitely postponed. The matter had been considered by a Liberal caucus, at which bribery of members was charged and pistols were drawn.

Countries South of Us

The port at Cape Gracias à Dios having been captured by Madriz, the revolutionists of Nicaragua now control no port, except so far as they are assisted at Bluefields by United States gunboats. Madriz has cabled to President Taft a long protest against the action of our Government there, saying he cannot reconcile it with the principles of neutrality. Replying, Secretary Knox upholds our naval officers in forbidding the bombardment of Bluefields, an unfortified town in which there is much American property. He points out that Great Britain forbade Estrada to bombard Greytown (held by Madriz), and he justifies our refusal to recognize Madriz's blockade of Bluefields by the "Venus" by showing that this steamship was enabled to leave New Orleans only by deceit. Madriz's representative at Washington asserts that arms and ammunition have been supplied to the revolutionists by Cabrera, the President of Guatemala.——The delegates of the United States to the Pan-American Conference, which is to be held at Buenos Ayres in July, sailed from New York on the 16th on the transport "Sumner." They are:

Henry White, recently ambassador to France; John Bassett Moore, Professor of International Law at Columbia University; Professor Bernard Moses, of the University of California; Professor Paul S. Reinsch, of the University of Wisconsin; Professor David Kinley, of the University of Illinois; Lewis Nixon, the shipbuilder; Lamar C. Quintero, of Louisiana; Colonel Enoch Crowder, assistant of the Adjutant General, U. S. A., and Professor Shepherd, of Columbia University, as secretary.

Among the subjects to be considered at the conference are mail and passenger steamship service between South America and the United States, the Pan-American railway, sanitation, a proposed interchange of university professors and students, and an agreement concerning patents, trademarks and copyrights.——In the course of his address at the commencement of the University of Pennsylvania, last week, on "The Spirit and Purpose of American Diplomacy" (to which we refer elsewhere), Secretary Knox spoke of the deplorable condition of Honduras, with respect to its foreign debt, which exceeds $100,000,000, with

interest unpaid for many years. American bankers, he said, had offered advantageous terms for the refunding of this debt. Our Government heartily approved their plan and was prepared, with the consent of the Senate, to give them legitimate protection. It is said that our Government has in mind a policy like that which has been so successful in Santo Domingo.

English Politics

Parliament has been in session for two weeks, but no business of public importance has been done awaiting a conference and possible agreement between the leaders on the two sides as to the proposed constitutional reforms, the idea being to avoid embarrassing the King on his accession. In the House of Lords it was announced that Lord Rosebery's bill for a reform in the House of Lords had been postponed until after a week or two the Government might be in a position to speak more definitely. To this Lord Rosebery gave consent, altho he insisted that his bill had no relation to the Government's proposed reforms. The conference now going on between Mr. Asquith and the Earl of Crewe on one side and Mr. Balfour and Lord Lansdowne on the other does not please the Irish Nationalists or the Laborites, who are opposed to any compromise. What is the result of this conference, formally announced on Monday, will not be known before we go to press.——The opponents of any change in the royal coronation oath have organized a Church association and have held a meeting in Albert Hall at which 3,000 persons attended. As reported, the members are recruited from the evangelical wing of the Church of England. They are not likely to come from the Nonconformists. Lord Kinnaird presided, and denied that there was the slightest desire in the world to vex their Roman Catholic brethren, but as he stated the matter, those who were taking the question in hand did not even dare to risk the possibility of seeing a priest-ridden monarch ascend the throne of Great Britain. A telegram was sent to King George protesting that any attempt to alter the declaration would grievously hurt the feelings of the people and endanger the hard-won liberties of the empire of Great Britain. A resolution was also passed vehemently opposing a revision of the oath and pledging "determined resistance to every attempt to tamper with this great constitutional safeguard."——The Duke of Connaught, brother of King George, will next year succeed Earl Grey as Governor-General of Canada.——It is provided by Parliament that in the case of the death of King George V, his wife, Queen Mary, is to be Regent, and the guardian of any child who may succeed him until the age of eighteen. She would as Regent have full power to sign bills and perform all other royal offices. The bill follows the precedent of the Act of 1840, passed on the birth of Queen Victoria's first child.

World's Missionary Conference

The World's Missionary Conference met last week in Edinburgh, with Lord Balfour, of Burleigh, as president. There were 1,200 accredited delegates and 2,000 other representatives of churches and missions present. The metings continued until June 23. The University of Edinburgh has conferred the degree of Doctor of Laws on six of the delegates, including Seth Low, John R. Mott and Gen. James A. Beaver, and the degree of Doctor of Divinity on President Mackenzie, of Hartford Seminary, and Robert E. Speer, of the Presbyterian Board, altho the latter is not a clergyman. The time has been given to full statistical reports of missions and to stirring addresses and discussions on questions of missionary policy, which will be published in a volume. One of the addresses was by Mr. William J. Bryan; and two letters aroused enthusiasm, one from Mr. Roosevelt and the other from the Catholic Bishop, Bonomelli, of Cremona, Italy, both letters addressed to Silas McBee, editor of *The Churchman*. Mgr. Bonomelli after treating of reasons for united effort in evangelization said:

"And now, I ask, are not these elements more than sufficient to constitute a common ground of agreement, and to afford a sound basis for further discussion, tending to promote the union of all believers in Christ? On this common ground, gentlemen, having your

minds liberated from all passions or sectarian intolerance, animated, on the contrary, by Christian charity, bring together into one focus the results of your studies, the teachings of experience, whether individual or collective, calmly carry on research and promote discussion.

"May truth be as a shining light, illuminating your consciences and making you all of one heart and one mind. My desire for you is but the echo of Christ's words, which have resounded through the centuries. Let there be one flock and one shepherd."

In his letter Mr. Roosevelt regretted that his home engagements did not allow him to remain in attendance on the conference, but that, if possible, he would have been a delegate from the Dutch Reformed Church. He said, among other things:

"In missionary work, above all other kinds of Christian work, it is imperative to remember that a divided Christendom can only imperfectly bear witness to the essential unity of Christianity. I believe that without compromise of belief, without loss of the positive good contained in the recognition of diversities of gifts and differences of administration, the Christian Churches may yet find a way to cordial co-operation and friendship as regards the great underlying essentials upon which, as a foundation, all Christian Churches are built. This is one of the lessons which has been particularly impressed upon me by what I have seen of Christian work in Africa, both in heathen and Mahometan lands.

"I believe that unity in a spirit of Christian brotherhood for such broad Christian work will tend not to do away with differences of doctrine, but to prevent us from laying too much stress on those differences of doctrine. It is written in the Scriptures that 'He that doeth my will shall know of the doctrine,' but the reverse of this proposition cannot be found in Holy Writ. Emphasis is to be put upon 'doing the will'; if only we can make up our minds to work together with earnest sincerity for the common good, we shall find that doctrinal differences in no way interfere with our doing this work."

In contrast with the great successes of missionary effort in many lands attention was called to the fact that there are other lands in which as yet no substantial missionary work has been done, such as Mongolia, Tibet, Turkestan, Afghanistan, Arabia, and large portions of Africa.

Electoral Reform in France

The Government scheme for electoral reform in France, proposed by Premier Briand, contemplates three great changes: (1) The re-establishment of the *scrutin de liste* instead of the existing *scrutin d'arrondissement;* (2) proportional representation in the interest of minorities; (3) re-election of the Chamber by sections every two years. It is contemplated that in future there should be one Deputy for every 70,000 inhabitants, or major fraction thereof. One of the consequences of this rearrangement will be to reduce by some twenty the existing number of the Deputies which is 597. In every department the members will be assigned in the proportion of the votes received, so that a minor party may have its share of Deputies. Second ballots will thus be abolished, inasmuch as in every election it may be assumed that enough votes will go to elect candidates from two parties. But in case the multiplicity of candidates prevents any assignment there will be no election, and a second election will be called for. There will be no "by-elections." In every election a "substitute deputy" will be chosen who will take the place of the Deputy in case of his death or disability. Deputies will be elected for six years, like our Senate, and they will be in classes, one class to go out every two years, so as to avoid the excitement of a general election. It has shown great courage in M. Briand to bring forward this plan. He is not a great speaker, but he has the confidence of the people as a trustworthy statesman.

Various Items

There has been some little concern in Germany over the health of the Kaiser, who has again withdrawn from engagements by order of his physicians and rested in bed. The explanation given is that he rode two hours on horseback and abraded his knee with some effusion; but the fact that he was lately laid up with a boil on the hand has led to a fear that this is a phase of the same general trouble in the system.——The German excitement against the Roman Encyclical in honor of St. Charles Borromeo, criticising the Reformation, has increased in gravity until the Prussian Government, which has a Minister at the Vatican, protested against it. Mass meetings have been held all over Germany, and have been very largely attended.

The Month of Roses

BY E. P. POWELL

Author of "The Country Home," Etc.

JUNE is the month of roses, as May is the month of apple blossoms and lilacs. Not a home in America should be without the help of roses to make it homeful. They make for peace and character, and they breed ozone for health. With grapevines I would have roses climb my verandas, and greet me in the wilder nooks and corners; not always grown in conventional beds.

Fifty years ago only the old-fashioned mother's roses could be generally had, and besides them there were very few choice sorts to be found even in hothouses. There is now hardly a corner of the United States where some varieties of the more choice ever-bloomers will not thrive. The hybrid perpetuals were the first to adjust themselves to our Northern climate, and they still give us a good list of invaluables. The hybrid teas have, however, displaced the former, because they are not only hardy, but give us continual bloom. They vary in their power to resist zero weather, but nearly all of this class can, with a slight protection, endure any Northern winter. I find myself, however, still not quite satisfied unless I retain some of the old-fashioned sorts, especially for hedges and groups. The old Cabbage rose was a beauty, any way, and the Damask roses, two or three varieties of them, are really elegant in flower, if only their blooming period were longer.

Among the hybrid perpetuals Clio, and Dinsmore, and Margaret Dickson, and Ulrich Brunner, and Prince Camille de Rohan, and Giant of Battles, and Jules Margottin, and Paul Neyron, with Baroness Rothschild, and Anna de Diesbach, and General Jacqueminot, make a superb list, giving bloom twice in the year, and occasionally in midsummer. If one wishes to add to this list take Alfred Colomb, a rich crimson; Gloire Lyonaise, Magna Charta, Vick's Caprice, Victor Verdier. Among these you will find almost every shade of scarlet, crimson, pink, white and carmine. Clio is to my taste one of the finest roses in existence, of a gorgeous flesh color, shaded pink, and a very free bloomer. Giant of Battles and Prince Camille give us two shades of crimson; Margaret Dickson is a glorious white rose; and Dinsmore as rich a scarlet as you could find anywhere, while Fisher Holmes is a very dark scarlet and a very free bloomer. Two other remarkably good bloomers are Mrs. Charles Wood and Madam Masson. Still, in the whole list there is nothing better for massing or grouping than Ulrich Brunner.

The hybrid teas are multiplying with great rapidity. New and glorious sorts come out every season, and one has to test for himself somewhat their capacity for bedding out in different soils. The most popular of all is American Beauty, a rosy crimson rose, and close after this Etoile de France has secured a very prominent place, as perhaps the best crimson rose for bedding that we have. J. B. Clark jumped into favor two years ago as an enormous deep crimson and very full-blooming sort. It is not so much a favorite with me as I expected. I like better, for crimson, Cardinal—which is certainly a noble rose in open ground. Betty is a superb pink, and Wellesley is another. Bessy Brown is a pure white, flushed with pink, and one of the finest roses in existence. Meteor is a splendid velvety crimson and has only one fault, that the petals drop too quick. Mad. Caroline Testout is a satiny rose that endures the sun nobly, and Helena Bambier is another first-class bedding rose, of a salmon rose, shaded yellow. Dean Hole, a splendid carmine, and Virginia Coxe, a fiery crimson, cannot be beaten for bedding, unless it be by the new rose Killarney, a rich pink. Souv. du President Carnot is one of my special favorites, both in bud and blossom, of a fine, rich blush. Richmond is unsurpassed for its magnificent flowers, if you can find it just the right spot. It is inclined to prefer indoors for doing its best. Now I have left three or four more which are among my own

special delights. One of these is General McArthur, bright and deep rose color; with Mad. Jules Grolez, a cherry red that is unsurpassed, and Kaiserin Augusta Victoria, a white that has no superior.

Living in the South half of the year, I have the privilege of growing tea roses with little consideration of their hardiness. In my Northern garden I prefer the hybrid teas and the hybrid perpetuals, but in Florida we luxuriate in the pure teas and Noisettes. Marechal Niel often stands in our beds with forty or fifty great and noble balls of gold weighing down its branches. Then we have climbing around our porches James Sprunt, Chromatella, and Gainsborough, all of which unfold their blossoms freely in January and February. Other climbers, more or less hardy, but all magnificent, are Climbing Meteor, Climbing Clotilde Soupert, Climbing Wootton, Climbing Helen Gould, and Mrs. Robert Peary. Almost as good are the hardy climbing roses, Thousand Beauties, Crimson Rambler, Philadelphia, Keystone (which is a thoroly hardy yellow), Rubin and Tennessee Belle. The Climbing Polyanthas are also nearly as hardy. Climbing Meteor is a sport from the old Meteor, and with some protection is hardy. Mrs. Robert Peary and Climbing Helen Gould need but little protection. James Sprunt is moderately hardy and a wonderfully fine cherry red. Climbing Bridesmaid is better adapted to the Southern climate.

Fifty years ago we began to hear about the Bourbons and the Chinas, two classes of roses that gave us our very best potting sorts, while a few of them made grand bedders, killing back somewhat with freezing, but sending up great blossoming shoots very quickly. I can remember well when the florists of a past generation bent admiringly over Malmaison—still one of our really fine roses, flesh color touched with rose. No garden is even now complete without Hermosa; not only a beauty in itself, but the parent of many other fine sorts by crossing. Hermosa is always in blossom, always giving perfect roses, in big clusters, on every new shoot. Queen's Scarlet is probably the best scarlet in this class, rich and velvety, unless Archduc Charles is better. Lucullus is one of the richest dark crimson, and Agrippina is a fiery red. Louis Philippe was a favorite with our mothers, because it was a good house rose as well as bedding.

Among miscellaneous roses, besides the old Cabbage and Cinnamon and Damask, the Wychurianas are really very useful. The color of the foliage is intensely rich green, and if you wish to cover a rockery or barren piece of soil, here you have something to do it. Some of them are only annual bloomers, but others are perpetuals, and they multiply themselves with great rapidity by suckerage. The Sweet Briar class of roses is enlarging rapidly, as are also the Rugosa roses. In the South we have the Cherokee roses running all over houses and huts, and covering outhouses completely, with a profusion of either single or double roses. I do not like it any better, however, than the old "Michigan" rose, as we called it in the North. I really never saw anything more comforting than the wild roses of Maine, bordering the highways and filling up every moist spot with tenderness.

Among the newer roses be sure and select some of the hybrid Rugosas, especially Conrad Meyer—perfectly hardy and very fragrant; color, silvery rose. Then we have Mad. Georges Bruant, semi-double and coming in great clusters, with delicious fragrance and a brilliant white in color. New Century is in this class, giving large, bright, rosy pink flowers, bordered with white. Some of the very newest tea roses for Southern planting are Mad. Grenville, a superb yellow, climbing, with long, finely formed buds and flowers. With this select Empress Alexandra, of a bronzy salmon; and Lady Dorothea, a large rose, giving different shades of peach and flesh. Among the new Bourbon roses are a striped Malmaison; and among the new Wychuriana roses we have doubles, running from white to pink, and pink Pearl gives us a crimson bud. The Golden Sun is a new rose, and wonderful apart from the fact that it is the first of a new race. The color is a blending of gold and red and pink, and the flowers are large and globular, giving incurved centers.

I am not giving you anything like a sketch of rose development up to date.

The catalogs will give you several hundred varieties, out of which you can very wisely select one hundred good growers and good bloomers. However, in any collection you must not omit the Souperts. There are the red, and the pink, and the yellow, and the white. Taken by itself, the red Soupert is known as Petite Andree, and it is a wonderful rose. It produces large, full flowers continually, and with astonishing profusion. The color is a brilliant crimson; and pink Soupert differs from it only in the color. Yellow Soupert is otherwise known as Mosella, and here again the flowers are produced in immense clusters and great profusion. White Soupert is like the preceding, only of an ivory white. The Cochet roses constitute another group, of five, and some of them with private names apart from the class. Red Cochet is known as Helen Gould, and I do not know many roses that rival it. It is always in bloom, on long, strong shoots, and its color is rosy crimson. Yellow Cochet is a hardy everblooming yellow rose, in which respect it has very few rivals, if any. Crimson Cochet is Etoile de France under another name, and is one of the most magnificent roses in existence, crimson velvet and deliciously fragrant. The Dingee-Conard Company sent out last year as the finest of all roses the Charles Dingee. What I have seen of it so far in my Southern garden makes me think that it is not overpraised. Its originators speak of it as surpassing in beauty every other known rose. Its flowers are of a rose shade, running into a creamy white, and they are produced in great profusion on strong, stiff stems.

The Lyon rose is a hybrid tea, and is spoken of generally as one of the most important introductions of modern times. It is a constant bloomer, with large double flowers, exceedingly fragrant, and of a pink shade, edged with red and shaded with yellow—a rose hard to describe. Magnafrano is one of the really great roses, always in bloom, exceedingly sweet, and of a deep, shining rose. The La France roses include five splendid sorts, for general planting, and almost hardy. Pink La France is very generally known now and loved by everybody. It was the parent of the hybrid tea class. I am almost inclined to select my twenty favorites, but am afraid that it would run into a list of at least fifty. Perhaps I have indicated my partiality sufficiently already. For winter roses there are few if any better than the old Chinas and Bourbons. Take Hermosa and Agrippina and Louis Philippe. Of course, the hybrid perpetuals are of no use for potting, Make your selection as a rule from the teas.

The future rose can hardly surpass what we now have. It seems to be a line of evolution that has reached its end. The newer sorts may improve somewhat in texture and persistence, and the plants may become somewhat larger and stronger. What we are to look out for is not larger roses or sweeter ones, but stocky growing ever-bloomers. Bear in mind that we have in the rose plant a cousin of the apple, and the pear, and the plum, and the cherry. All these went off to fruit bearing, while the rose bush evolved sweeter and larger flowers. Will it ever go to fruit bearing? This is not entirely impossible, altho improbable—at least for a long time to come. Who knows but some day we may have a new fruit in this family, by a sudden divergence, or by a gradual evolution. It is not absolutely impossible that the seeds of the rose may after awhile do what the seeds of the blackberry are doing, or that we may even have a bunch of cherry-like and edible fruits in the place of the hairy but beautiful seed pods.

If I were young once more I would, with all my cross-breeding and seedling growing, add a good deal more work in the rose garden. I have made one of the finest apples that now can be grown in our orchards; the best currant for our gardens; a good lot of extra fine grapes; but I have no seedling rose that is worth the while. I wish that my younger readers would try growing rose seedlings. Give posterity not only what you earn by your labor, but what you make by your wits. It will be fine to leave our names to blossom in the gardens of future generations—to live forever in a rose bed. Let them ask who you were, not from a deed of bravery, but from a thing of beauty and sweetness. I doubt if the generals, whose names some of our roses bear, have left any better testimonial of their manhood.

When you get a package of roses, do

not crowd the lump of dirt down into a pot, and surely not into the middle of a pot of earth in which some other plant has previously grown; but, whether you plant it in a garden or the greenhouse, shake gently off the loose dirt, leaving that which clings to the finer roots. Do it very gently, and if the soil be sticky it will be even better to wash the roots in tepid water; then plant rather deeper than the plant formerly stood, in either bed or pot, spreading the roots carefully. Now do not put any manure or strong fertilizer on these roots. The soil must be good garden soil, only slightly enriched from the edge of a barnyard, or such soil as florists keep prepared. Mark what I say, do not overfeed anything that you plant, nor feed it very richly until it begins to grow. This is true of trees as well as roses. But when the rose bush is well under way you can hardly overdo the enriching. Roses are great eaters, especially the climbers, and they all like water.

Cut back your teas and chinas, that blossom on new shoots, as soon as the shoots are thru blooming; but head in your hybrid perpetuals and others very carefully, removing only the weaker shoots and superfluous suckers. If you want roses to climb well over a sunny exposure you had better shield them somewhat until they get good size and able to shield themselves. In the country, where you have plenty of land, and specially where there are glens and steep banks, try covering the slopes with the sturdy growing, old-fasioned Damask and the new-fashioned Wychuriana. You can see a bank of these roses as far as you can see anything, not only for the beauty of the blossoms, but the brilliant green of the foliage. These sorts run their roots underground and take good care of themselves. On the whole they will give you more satisfaction than formal beds filled with sorts that you must work over.

One really well-grown rose bush near your door will give you more pleasure than a dozen that you have to make special trips to examine. In my Southern home a Marechal Niel with fifty buds and flowers, and standing six or eight feet high, will pretty nearly satisfy any rose lover. In the North I do not know that I have had any more satisfaction than from a big Marshall P. Wilder. The General Jack will also pay for having a lot of room and a lot of feed, while the little Hermosa is the cosiest and most floriferous of the smaller-growing plants, if we except Clotilde Soupert—and the Soupert has a bad fault of losing a lot of its buds in wet weather. Another little rose that will stand a lot of multiplication is Agrippina, and I never can quite forget the Sanguinea which, seventy years ago, was the favorits of my little mother. Those who are governed by their noses, as I confess I am largely, will be drawn to those that give a special fragrance. I am for this reason specially fond of Lord Raglan, which emits an odor like honey, while for color no rose more completely satisfies me than Jules Margottin.

However, you will soon get acquainted with a few roses for which you have a special affiliation. Do not try to follow according to my tastes, but learn to feel freely in your garden as you learn to think freely in your library. And this is June. I have written my notes partly in Florida, with a great climbing Gainsborough dropping pink petals all over me while the sun dropped down behind the pines of Lake Lucy; and I have written them partly in my Northern balcony, where a May Duke cherry swings its arms full of just coloring fruit, and a bunch of McArthur and Virginia Cox roses fills a vase at my hand. What would June be without its roses? Plant them freely; love them dearly; and be a better as well as a wiser man for their companionship.

CLINTON, N. Y.

Oregon's Struggle for Purity in Politics

BY JONATHAN BOURNE

United States Senator from Oregon.

AT the advent of President Roosevelt, the tendency in the United States was to measure national prosperity by property rather than by personal liberty. The commercial force of society was rapidly throttling the police power of the Government. Political machines and bosses dictated the legislative and administrative destinies of communities and States.

With his experience in practical politics, familiarity with governmental operations, inherent honesty, dynamic energy, and limitless courage, Mr. Roosevelt demonstrated that he measured up to the needs of the time, and assumed leadership for reinstatement of the police power of the Government in supremacy over the commercial force of society. To him belongs credit for the re-establishment of these two great forces in their proper relative positions. He awakened the public conscience, and the result is a struggle thruout the nation between the advocates of what I would term "popular government" and the advocates of delegated government.

The justice of all law rests primarily on the integrity, ability and disinterestedness of the individuals enacting it, those construing it, and those administering it. And when we find, as at present, that the times seem all awry; that unrest exists thruout the world; that daily uncertainty grows stronger as to future events, it is natural that people should speculate as to the cause.

In my opinion the basic reason is that the people have lost confidence in many of their public servants and resent attempted dictatorship by "would be" political bosses and representatives of special interests who desire to direct public servants and legislation for their own selfish measures rather than assist in the enactment of laws guaranteeing justice to all and special privileges to none. Successful and permanent government rests primarily on the recognition of the rights of men and the absolute sovereignty of the people. These are the principles upon which is built the superstructure of our republic. Their maintenance and perpetuation measure the strength and the life of the republic.

It is common knowledge, and it is not without cause, that the people have lost confidence in some of their public servants, just as stockholders have lost confidence in corporation management, and it rests with the earnest, the honest, and the patriotic in the country to discover a means to obliterate all excuse for this distrust and unrest.

The great remedy in government is direct selection by the people of their public servants with the resultant accountability of the public servant directly to the people and not to a political machine or boss. I use the word "selection" rather than "nomination," for to my mind it more clearly represents the idea of the responsibility of good citizenship. Selection implies the careful investigation of all and the choice of one. In corporation management the remedy is rigid responsibility to government, obedience to law and accountability to stockholders; giving both the Government and the stockholders the fullest publicity of its operations.

A direct selection by the people of their public officers means a representative government—a truly representative government; not one where the selection of public servants is left to a political machine or boss, as is frequently the case under our convention system, the tendency of which is toward misrepresentative, not a representative form of government, tho the final election is by the people. For years the desirability of popular selection of candidates for Presidency and Vice-Presidency has grown upon my mind as something increasingly necessary to our national prosperity.

By the adoption of such a plan the President would be relieved of all pre-nomination and pre-election obligations, except the obligation of good service to

all the people. Accountability to the people alone would be established and the aspirant to the Presidency would be free from the necessity of consulting the wishes of the men who make and manipulate conventions. To render good public service would be the effort, for re-election would depend wholly upon a demonstration of capability and fitness for the office.

This thought has already taken root in my own State, and at the next general election a bill will be presented to the people of Oregon, under the initiative law, to further enlarge the scope of our present primary law by providing for the direct primary election of delegates to the national conventions, selection of presidential electors, and giving the opportunity to the elector, in his party primary, to express his preference for President and Vice-President. I am confident that the people of Oregon will enact this law, and in the hope that other States will follow her example—in which event a method of popular selection of Presidents and Vice-Presidents would be secured without violation of the Federal Constitution—I am tempted to give, briefly, the story of Oregon in her successful efforts to secure purity in politics.

Not very long ago a few self-constituted leaders in Oregon politics arrogated to themselves the prerogatives of government and made their assumption effective thru illicit combinations and the use of money where it was necessary to their purposes of control—that is they commercialized conventions, legislatures, and the administrative branches of city, county and State government. It was not a condition peculiar to Oregon. It obtained—and I believe it still obtains—in a more or less flagrant degree, in every State in the Union. It had its boldest, most unscrupulous executive genius in Boss Tweed, who recognized the opportunity of the crook in government by party thru convention nominations, and declared that he did not care who elected the candidates so long as he had the power to nominate the ticket. Revolting against these conditions Oregon has evolved the best known system of popular government. First she adopted the Australian ballot, which insures secrecy, prevents intimidation, and reduces the opportunity for bribery—a prerequisite to any form of popular government. In 1899 Oregon enacted a registration law, which, with subsequent amendments, requires registration prior to voting in either the general or the primary election and provides that before voting in a party primary a voter must register, under oath, his party affiliation. Upon the registration books are entered the full name of the voter, his registration number, date of registration, his occupation, age, nativity, and his place of residence. These and other identifying facts are entered in the precinct registers which are placed in the hands of the election judges and clerks on election day, so that illegal voting may be prevented. The greatest boon of American citizenship—the right to participate in government—is carefully protected, and dead men, repeaters and non-residents can no longer be voted in Oregon.

In June, 1902, by a vote of 62,024 to 5,668, Oregon took the next step in popular government by the adoption of the initiative and referendum amendment to the constitution. It provides that legislative authority shall be vested in a legislative assembly, but that the people reserve to themselves the power, by petition of 8 per cent. of the voters, to propose laws and amendments to the constitution and to enact or to reject the same at the polls independent of the legislative assembly; and also reserve the power to approve or reject at the polls any act of the Legislature. The veto power of the Governor does not extend to any measure referred to the people. Their voice is final. The Secretary of State must mail to every registered voter in the State a printed pamphlet containing a true copy of the title and text of each measure to be submitted to the people; and the proponents and opponents of the proposed law have each the right to insert in the pamphlet such arguments as they see fit to make, at an actual cost to themselves of the paper and printing. Thus the initiative develops the electorate, placing directly upon them the responsibility for legislation; the referendum elevates the Legislature because of the possibility of its use in case of undesirable legislation. Brains, ideas and

arguments, rather than money, intimidation and log-rolling govern the standards of legislation. Corporation attorneys must exercise their mental activities along constructive rather than destructive and avoidance lines. The possibility of scandal is minimized, recipients of franchises freed from the imputation of secret purchase, and general community confidence is secured. The people of Oregon have already voted upon twenty-three measures submitted to them under the initiative, five under the referendum, and four referred to them by the Legislature, and the result utterly disproves the charge that people as a rule will not study such questions but will vote in the affirmative regardless of the merits of the measures presented. They have enacted laws and adopted constitutional amendments in which they believed and have defeated those of which they did not approve. The results attained under direct legislation in Oregon compare so favorably with the work of a legislative assembly that an effort to repeal the initiative and referendum would be overwhelmingly defeated.

As an instance of what may be accomplished under the initiative, by the people acting for themselves instead of thru biased Legislatures: for many years efforts had been made to secure adequate laws for the protection of salmon in the Columbia River, but because of the conflicting interests between the upper river and the lower river, Legislatures could not be induced to enact laws that would protect the fish. As the result the salmon fisheries were being destroyed. At the election in 1908 the upper-river fishermen proposed, under the initiative, a bill practically prohibiting fishing on the lower river, and the lower-river fishermen retaliated with a bill forbidding fishing on the upper river. There was a wide discussion and in the end the people, disgusted with the failure of the Legislature to enact suitable laws for the protection of the fish, passed both of these bills and fishing was practically prohibited on both sections of the river, thus forcing the Legislature to consider the matter and provide adequate protection. I am sure that this would not have been done but for the popular adoption of the two fisheries bills.

Thirty-two measures in all have been submitted to the people of Oregon, under the initiative and referendum, at a cost of $25,000, and I have no hesitancy in saying that they feel that they have received full value for their money. The only persons who raise the question of cost are those who would oppose direct legislation if it were free of cost; while on the other hand I am sure I could cite numerous instances of laws passed by Legislatures which cost the people much more, without any tangible return, and perhaps I could cite a few measures which have been defeated by Legislatures with resultant loss to the people of many times that amount. The cost of legislation cannot always be measured in dollars.

When the system was under consideration it was freely predicted by its enemies that the power would be abused and that capitalists would not invest their money in a State where property would be subject to attacks of popular passion and temporary whims, but experience has exploded the argument and taught us that the people are not only intelligent, but fair and honest; that they act calmly and deliberately, and with the spirit of fairness which always characterizes a body of men who earn their living and acquire their property by legitimate means. Corporations have not been held up and blackmailed by the people as they have often been by legislators. "Pinchbills" are unknown. The people of Oregon were never before so prosperous and contented as they are today, and never before did the State offer such an inviting field for the investment of capital.

The people of my State—and I believe the people of every other State—can be trusted to act intelligently and honestly upon any question of legislation submitted to them. But the initiative and referendum, while but one of the features of popular government in Oregon, has also been the means by which other reform laws and constitutional amendments have been secured. The people cannot always get the laws which they desire thru the Legislature, but they can get them thru resort to the initiative. Thus, the next step, by a vote of 56,205 to 16,354, was the adoption of a direct primary law to supersede the old and un-

satisfactory convention system. The primary election is held forty-five days before the general election, at the usual election places, with the usual three election judges and three clerks appointed by the county courts.

Any legal voter may become a candidate in the primaries for nomination for any office, by filing a petition signed as prescribed by law. The Australian ballot is used as in the general election and the qualified voter, having registered his party affiliation under oath, can vote only in his party primary. The right of each party to choose its own candidates is thus protected and an evil all too common where restrictive party primary laws are not in force is avoided. United States Senators are nominated by their respective parties in party primaries and the candidate receiving the greatest number of votes thereby becomes the party nominee. Then, in the general election the nominees are voted for by the people and the individual receiving the greatest number of votes in the general election thereby becomes the people's choice for United States Senator, to be ratified in election by the Legislature.

Both my colleague, Senator Chamberlain, and myself were selected by the people and elected by the Legislature under the provisions of this law. Opponents of popular government and especially of the election of United States Senators by a direct vote of the people have bitterly assailed our law because a Legislature, overwhelmingly Republican, elected Senator Chamberlain, who was a candidate selected by the Democratic Party, but nominated by the whole electorate of the State as the people's choice for United States Senator; but upon sober reflection I think that every intelligent man who is honest with himself must concede the fact that instead of being the basis of criticism this is the highest kind of evidence of the efficiency of the law; and every advocate of the election of United States Senators by popular vote must realize that Oregon has evolved a plan wherein, in effect, the people enjoy the privilege of selecting their United States Senators and, thru the crystallization of public opinion, enforcing legislative ratification of their action.

In my opinion the direct primary is the only practicable way of fully securing to the people the right to choose their own public servants. To my mind the convention system is most pernicious because the party electorate feels that its responsibility ends with the selection of its convention delegates. The responsibility of citizenship is weakened and shiftlessness encouraged. As soon as delegates to the convention are selected the power of choosing public servants becomes centralized in a few and the opportunity is extended to individuals and interests who wish to use public servants for selfish or ulterior purposes. Influences adverse to the general welfare are immediately brought to bear upon this body of delegates. Often a convention nominates a man for public office who, prior to the convention, was never seriously considered as a probable candidate. Thirty years' experience in politics has strengthened my conviction that the prevailing system of convention selections of party candidates is not a representative but a misrepresentative form of government. The people certainly have no voice in the selection when their temporary representatives have no idea of making a selection until occurrences transpiring during the convention determine their action.

The convention nominee realizes that his nomination is due chiefly, if not entirely, to the boss; and with this knowledge naturally goes a sense of obligation. The efficiency and independence of the nominee are seriously affected and his value as a public servant is in many cases completely annihilated. The nominee under the direct primary receives no benefit from promises made to political bosses or machine managers, and therefore makes no such promises. The members of the party determine which candidate best represents their ideas, and he makes his promises directly to them. He owes his selection to no faction, compromise, machine or boss, but to the members of his party and to the electorate of the State direct. He is accountable to them alone and has every incentive to render the best possible public service. On the other hand, the direct primary encourages the people to study public questions and pass judgment upon

the acts of their public officials. In every way it tends, strongly, to the building up of better citizenship.

Oregon's next move in popular government was the adoption of the corrupt practices act, which the Legislature refused to enact, but which the people adopted under the initiative by a vote of 54,042 to 31,301, making it possible for a man of moderate means to be a candidate on equal footing with a man of wealth. It encourages and aids publicity and the full and free expression of opinion, but prohibits an excessive or improper use of money or any of the other agencies for the subversion of clean elections.

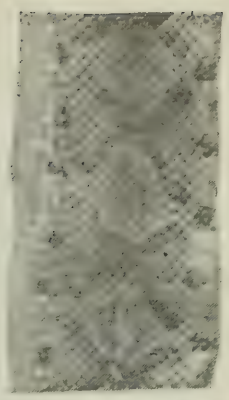
Then followed the final step—the adoption of the recall amendment to the constitution, whereby any public officer may be recalled, after he has held office for six months, under carefully specified conditions. Thus Oregon has evolved what is certainly the best system of popular government which exists in the world today. The verdicts of the people will be based on ideas, not money; argument, not abuse; principles, not bosses or machine dictation. It is the course that must be pursued before the wrongful use of corporate power can be dethroned and lasting reform secured. It is the one course to secure absolute government by the people.

The people are not only fully capable of governing themselves, honest and intelligent in the composite, but they are also decidedly the best judges as to those individuals to whom they shall delegate the truly representative power.

The declaration by each State of its choice for President would be in no sense a wider departure from the Constitution than was the transformation of the electoral college into a recording board. According to the Constitution the electors, chosen by each State, were to be free men, bound to no candidate nor to any party. They were to meet and survey the whole country choosing therefrom according to their own unhampered and wisest judgment the man best fitted to be the head of the nation. This was the law of 1789—and it is the law today. Theoretically and legally the electoral college which cast its perfunctory vote for Mr. Taft and Mr. Sherman might have elected, instead, Mr. Bryan and Mr. Kern. Had this been done all the vast power of the Supreme Court could not have set the election aside or compelled a true registration of the popular decision as exprest at the polls. Without amendment the Constitution has been changed by the force of mere popular acceptation so that the machinery, today, is used to effect an end which it does not in its letter express—and did not in its conception anticipate. We have made the constitutional machinery suit our idea of the way this Government should be conducted. We have found it better that by means of political parties we should choose directly between our candidates and by moral force bind the elector to cast his ballot for the candidate who is the people's choice, even tho he may regard him as unfitted for the office of President.

We have evolved a Presidential election plan which, while departing from the philosophy of the makers of our national organic law, preserved its letter and made it subserve the purposes of a society more highly developed than that existant when the law was made. This is the history of all written law. There is nothing startling in the proposal that the Constitution or any other law shall be interpreted so as to meet modern needs and thoughts. We moved toward democracy when we abolished the elector as an elector and made him an agent to express, according to the Constitution, the direct wish of the people. It will be a much less radical move to give instructions by direct popular vote to the delegates who are to name the party candidate. It would simply be instituting a procedure complementary to the former; drawing nearer to real popular government and giving to the people a direct interest and a direct voice in the selection of the candidates for the highest offices as well as in their final election to office.

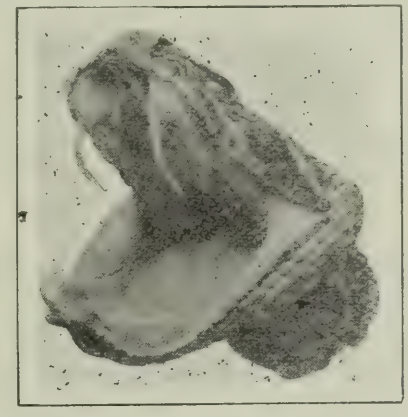
WASHINGTON, D. C.



SKIN OF TIMBER RATTLESNAKE.

Our Poisonous Snakes

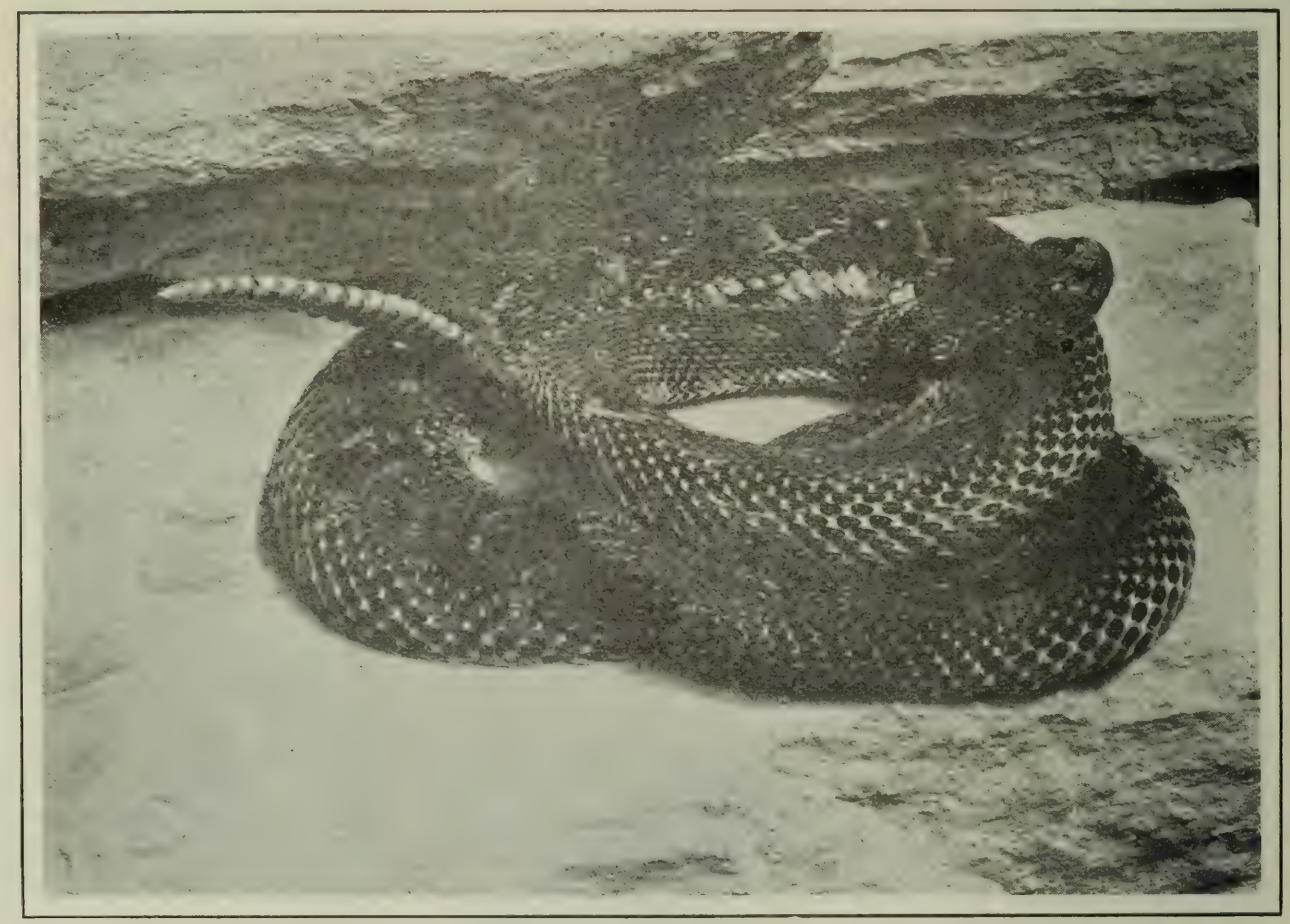
BY RAYMOND LEE DITMARS



[Mr. Ditmars is Curator of Reptiles in the New York Zoological Park. He is the author of "Snakes Found Within Fifty Miles of New York," "The Reptile Book," etc.—EDITOR.]

SKIN OF COPPER HEAD SNAKE.

WITH the vacation time full upon us and the idea rampant to "get away" and breathe the air of the wilds, it is well to understand the character of certain creatures that are little known, and which, in not a few regions, menace the unwary. Such are the poisonous snakes of this country. Their general habits and distribution should be well understood by every lover of the woods.



It is not generally known that inhabiting the United States are some of the most deadly species of serpents recognized by science, and these fairly teem in some parts of the country. In the Eastern States, in areas populous with villages and summering places, poisonous serpents are abundant. Practically every portion of the United States is inhabited by dangerous snakes. The greatest variety of *species* is found in the Southern latitudes, but the few Northern kinds are so common that *venomous* reptiles are actually more abundant in some districts of New York and Pennsylvania than in the South. While but a single species of poisonous snake inhabits the Pacific Coast region, representatives of it are abundant in many districts.

Permission N.Y. Zoological Society

Compared with the number of species of harmless snakes, the poisonous reptiles of this country are in the vast minority. One hundred and eleven species of snakes are found in this country; of this number seventeen are poisonous. One species of poisonous lizard inhabits the United States. This is the Gila monster. It frequents the desert regions of the Southwest.

While the distribution of dangerous snakes in the United States may seem a great danger to those who are not thoroly familiar with the characteristics of reptiles, it should be explained, nevertheless, that accidents to man are rarely recorded. Of the few we have on record the majority result from the careless handling of poisonous serpents in eccentric exhibitions that are anything but educational. This circumstance is at strong variance with other countries — South America, Africa and India. In the latter country the human death rate from the bites of snakes runs up to about 25,000 a year. It should be understood, however, that in the tropical countres a large part of the population goes about bare-legged, while venomous reptiles prowl into the immediate domains of man. In the United States the poisonous reptiles retreat from the areas inhabited by mankind. The spreading zones of cultivation have practically obliterated a number of the species over great areas, while the non-venomous species actually seek the regions of tilled fields to destroy the common enemies of the farmer—the rats, mice and moles. The dangerous reptiles of this country are essentially creatures of wild, undisturbed places, and in such situa-

TIMBER RATTLESNAKE.
Black phase.

tions we instinctively keep an eye out for them. Hence reports of snake bites in the United States, particularly in the northern latitudes, are about at zero.

Before considering the characteristics of the formidable creatures to which this article relates, it is well to have a bird's-eye view of them from the standpoint of number of species and distribution. The following list presents this as concisely as possible:

It will be seen from the list that the Southwest forms the headquarters of the rattlesnakes—that is, according to the number of species.

With the exception of the coral snakes, the poisonous serpents of this country may be readily distinguished, owing to a strange development that will later be explained. The coral snakes are deceptive-looking reptiles. They have a slender body, a head not at

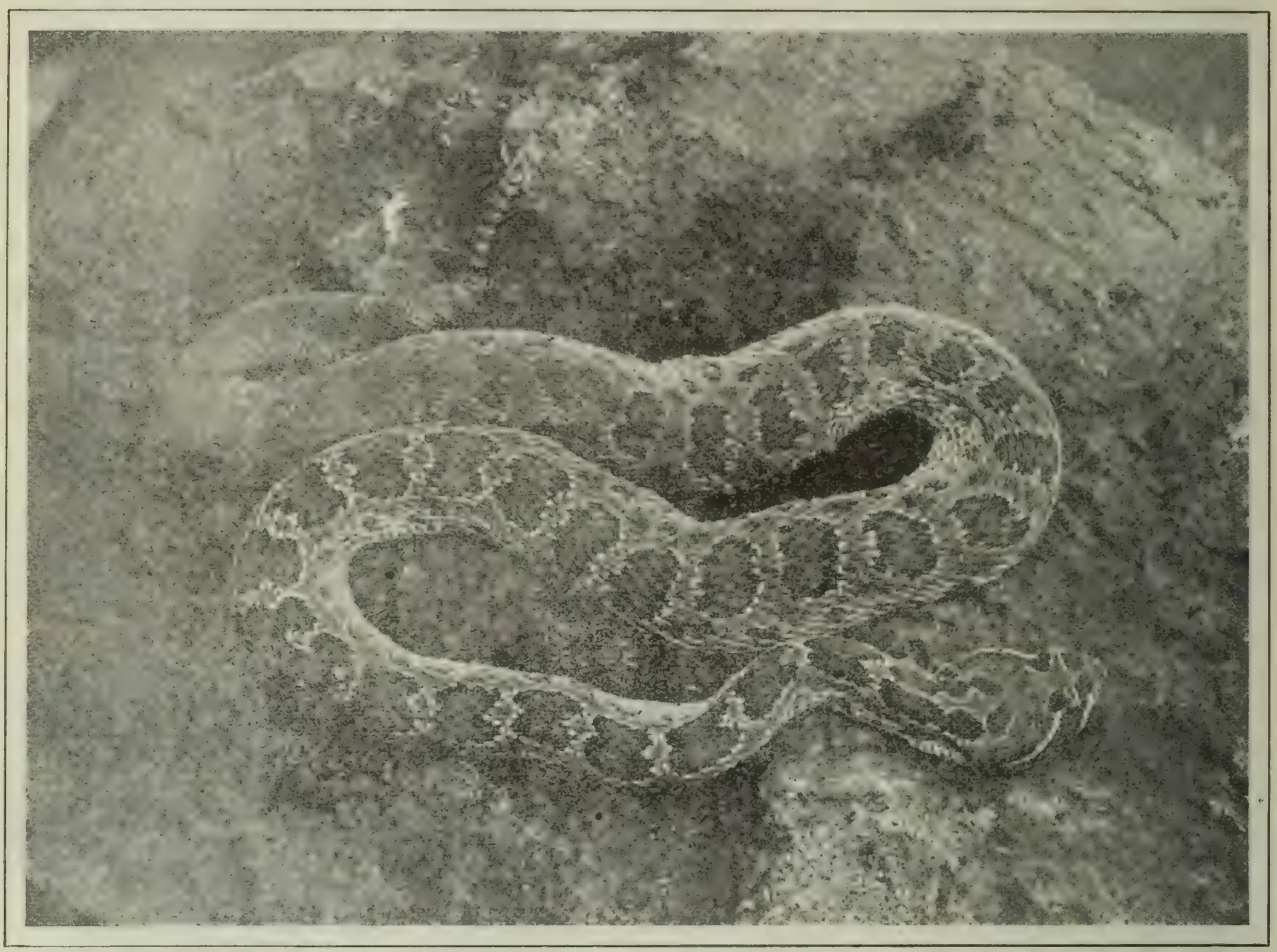
Diamond Rattlesnake	*Crotalus adamanteus*	The Southeast.
Timber Rattlesnake	*Crotalus horridus*	Eastern United States.

all distinct from the neck, and look like harmless serpents. They actually belong to the same family as the non-venomous snakes, differing from the latter only in the possession of very short venom-conducting fangs. Both species of the genus *Elaps* inhabiting the United States are restricted to the southern portion of the country. Their pattern may be described as broad, alternating rings of red and black, the latter bordered with very narrow rings of yellow. Several harmless snakes have similar colors arranged in rings, but each yellow ring is wider and always bordered by a *pair* of black ones. As the coral snakes are burrowers, with very short fangs, they are of no particular danger to the sportsman. It is the long-fanged snake, that inflicts a veritable stab with its venom-conducting teeth that we must consider with more detail. We rate the copperhead snake, the water moccasin and the various species of rattlesnakes under the head of long-fanged serpents. They do not "sting," but inflict a bite dealt with a pair of long, hollow, recurved teeth in the forward portion of the upper jaw. These teeth or fangs have an orifice at their tip for the ejection of venom, and from their structure mankind has copied the hypodermic needle. They are rigidly attached to movable bones, and when the jaws are closed fold back against the roof of the mouth out of the way. Each fang connects, by means of a canal, with a gland situated in the temple and containing a virus which Nature has provided the serpent for the purpose of killing, primarily, the prey, but secondarily the fangs are used as weapons of defense. The forked tongue is in no way connected with the venom apparatus, is not a "sting," but serves as an organ of great delicacy in examination and catching vibrations of sound, for the serpent's ears are represented by mere internal rudiments.

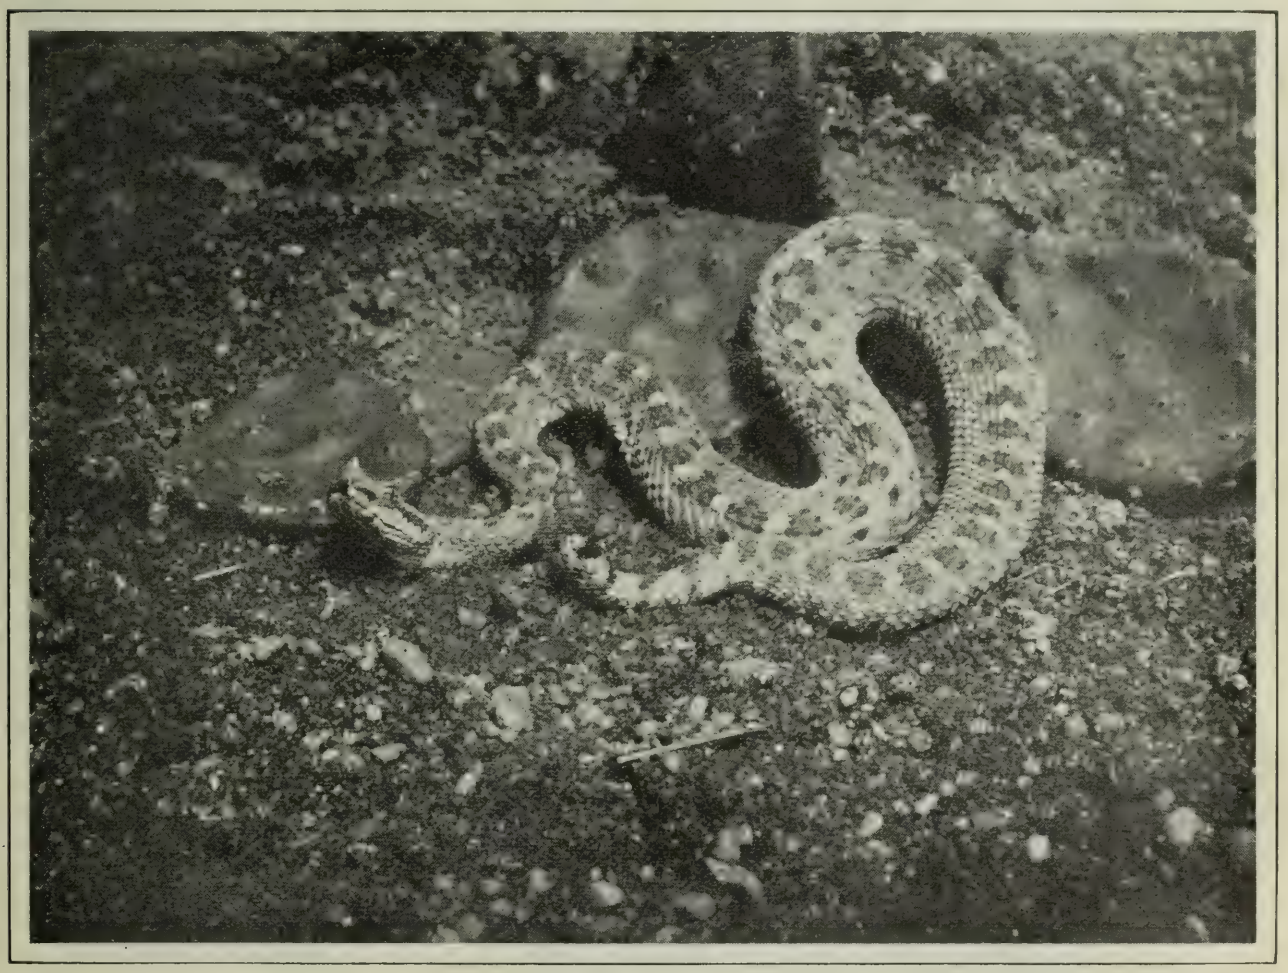


Now that we realize the deadly apparatus of the long-fanged snakes, we naturally want to know how to distinguish them. This is an easy matter. The greater number of species are rattle-

TIMBER RATTLESNAKE.
Yellow phase.

snakes, and representatives of all of these may be immediately told by the possession of a caudal appendage unique among reptiles, and with which they as a rule give honest warning when alarmed.

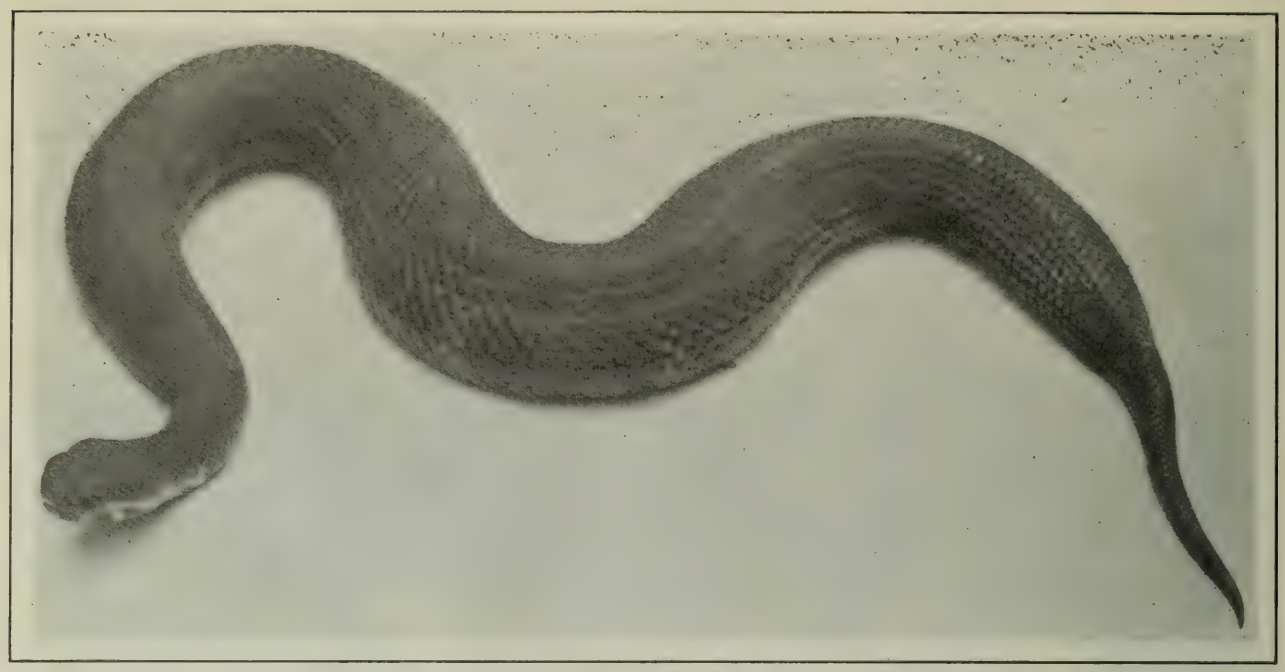
There is no possibility of making a mistake. While there are a number of species, as may be seen from our list, flat head. Some of our innocuous snakes have just these outlines. The copperhead snake, or highland moccasin, and the poisonous water moccasin of the South belong, as do all the rattlesnakes, to the subfamily of pit vipers. On each side of the head, between the eye and the nostril, is a deep pit. Here we have



PRAIRIE RATTLESNAKE.

the characteristic of the rattle naturally relates to all. The amateur naturalist, sportsman or the farmer are not so particular as to the exact species. What they are desirous of knowing is whether a snake is poisonous—and the possession of a rattle shows this to be the case.

This leaves us with but two species in doubt—the copperhead snake of the Eastern States generally, and the water moccasin of the Southern portion. The so-called water "moccasin" of the East that occurs abundantly north of Central North Carolina is a harmless water snake.



It is a mistake to imagine that a poisonous snake may be told immediately by the possession of a thick body and a a character by which immediately to distinguish the moccasins. But there are other points: While our harmless snakes have two rows of plates on the under surface of the tail, these two poisonous species have a single row of plates for the greater length of the tail. Our harmless snakes have the pupil of the eye round; the copperhead and the water moccasin have an elliptical or cat-like pupil. The former ranges from Massachusetts to Florida and westward to the Mississippi. It is a pale brown, with reddish-brown blotches crossing the back, the head often of a coppery hue. The water moccasin abounds in the swamps and sluggish waterways of the Southeast.

From an examination of our list of poisonous snakes of the United States it will be seen that in the entire eastern region, north of North Carolina, there are but two species of dangerous reptiles—the timber or banded rattlesnake and the copperhead snake. The Eastern rattlesnake is represented by various color phases ranging from sulphur yellow to black. There is not much variation with the copperhead, tho on some specimens the ground color is pinkish. The rattlesnake is a creature of mountainous, or distinctly hilly, districts, preferring dry slopes or ledgy formation. Its marked liking for rock ledges is always to be noted. Take a mountainous slope, with a shattered series of ledges, this generously clad with a growth of scrub oak and huckleberry bushes, and we have ideal rattlesnake ground. The species is quite clannish and where we find one there are liable to be many nearby. In the damp valleys between the mountains, where the woods are dark and cool, the rattlesnake is seldom or never seen. It is in the latter location that we are more liable to find the copperhead snake, which subsists largely upon frogs and birds and prefers the lower country. While the copperhead snake is also fond of rocky ground, it selects damp, cool places as a rule, tho it sometimes congregates on the higher ledges prior to the period of hibernation. The average copperhead will glide quietly for shelter if disturbed, but if escape be cut off, fights bravely. It is a more timid reptile than the rattlesnake, and more agile in gait. When preparing to strike it displays an honest habit of vibrating the tail, and if among dry leaves produces a distinct whir. The writer has discovered the whereabouts of a number of copperheads from this habit.

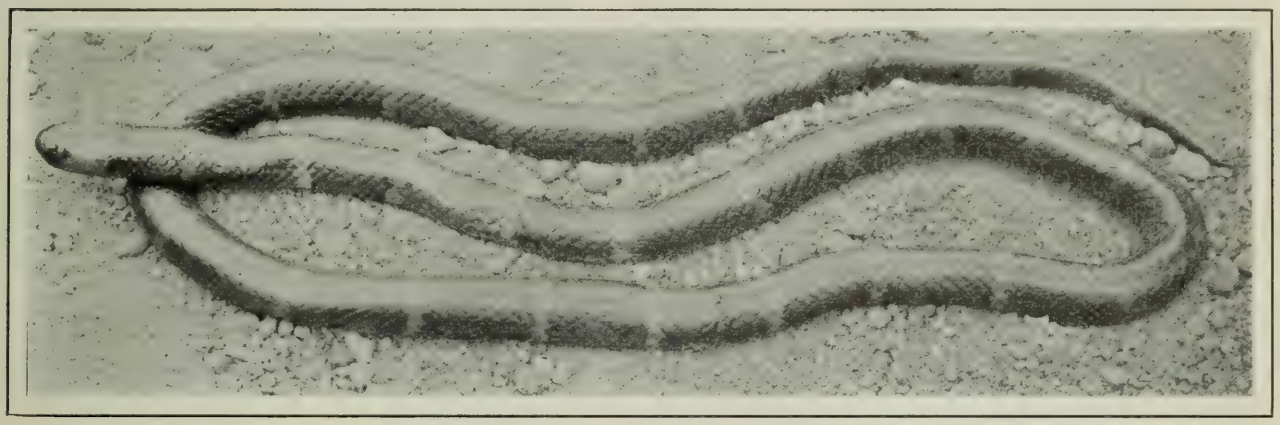
HORNED RATTLESNAKE.
Arizona.

It is quite wrong to imagine a poisonous snake can spring at an enemy. It never jumps from the ground and seldom strikes more than a third of its length.

WATER MOCCASIN.
A very abundant poisonous snake of the Southern States.
Permission New York Zoological Society.

Incidentally it should be understood that it is not necessary for a rattlesnake or any poisonous serpent to coil before striking. It can strike from a crawling position provided the neck can be doubled into an S-shaped loop to lurch the head forward. The average rattlesnake will seldom or never strike a man above the knee, and a pair of stiff riding leggings—puttees—will render one quite safe from a snake's fangs.

Every sportsman venturing into country known to be infested with poisonous snakes should carry certain articles to be used in case of accident. These include a hypodermic syringe, a rubber ligature,



COPPERHEAD SNAKE.

a sharp scalpel or a razor, a vial of permanganate of potassium (crystals) and a couple of tubes of anti-venine—a Pasteur product. The entire outfit can be carried in the pocket of a roomy shooting jacket.

A bite is usually upon some part of the arm or leg. Everything depends upon promptitude in performing the first two processes. First, the application of a ligature a short distance above the bite. Second, the lancing into the fang punctures, at least as deep as they are. This second operation starts a flow of the poisoned blood, which should be accelerated in every way possible. It is not dangerous to suck the blood away providing there are no abrasions in the mouth or on the lips. If water is nearby the wounds should be washed, then bathed repeatedly in a solution composed of enough permanganate of potash crystals in water to produce a deep wine color. If no doctor is nearby the anti-venomous serum should be injected by means of the hypodermic syringe in some part of the body where it will quickly gain the general circulation — preferably under the skin of the abdomen.

At this stage there is but one thing to do if possible. Journey to the nearest physician of repute: for grave symptoms, beyond the power of any but a practical medical man to combat, may possibly develop.

While the treatment of snake bite is rather a gloomy chapter in the discussion of our dangerous reptiles, it is nevertheless a matter that should be understood by every sportsman. However, the danger of receiving a bite is very small, and in regions visited by the writer that were notorious for the occurrence of poisonous serpents, he found a pair of stout leather leggings afforded him ample protection.

THE CORAL SNAKE.

A poisonous species of the Southern States which, owing to its slender body, resembles the innocuous serpents.

Just because a certain proportion of our reptiles is dangerous, is no reason for a wholesale slaughter of every snake one meets in his travels. The blacksnake, checkered "adder," green snake, king snake and many others among our Eastern serpents are not only quite devoid of harm, but of immense value to the farmer owing to their habit of destroying rats and mice.

Looking a Gift Horse in the Mouth

BY A. J. PORTENAR

Member of Executive Committee, Typographical Union No. 6.

SURELY neither a grateful nor a gracious performance. Excusable, however, if done in good faith, with avoidance of personalities, and with the result that moot questions are raised that are at least worthy of consideration.

When the bill incorporating the Rockefeller Foundation was introduced in the Senate by Senator Gallinger, it was for the most part met with conventional commendation. The probable size of the gift and the extraordinary latitude of the charter were discussed in the spirit which makes big things fascinating to the American public; but as a matter which might exercise important influence on the national life it received little attention. The thought that this influence might conceivably be an evil one was even less regarded. In short, the Rockefeller Foundation provided a nine days' wonder which is already half forgotten.

At the hearing on the bill before the Committee on the District of Columbia, Mr. Starr J. Murphy, one of the incorporators named in the charter, and a gentleman long associated with Mr. Rockefeller in the administration of his charities, appeared to make a statement and answer possible objections. No one appeared in opposition, the few questions asked by the Senators of the committee had no vital significance, and the whole proceeding was of the most perfunctory character. The very little discussion that was had related to exemption from taxation of the property of the proposed Foundation, and resulted in the insertion of an amendment which specifically exempted such property from taxation "by the United States or any Territory or District thereof." This amendment was purely technical, and was inserted solely that the question of jurisdiction might not be raised. As Mr. Murphy pointed out to the committee: "In many of the States there are general statutes exempting all philanthropic foundations."

The only discordant note to mar the otherwise perfect harmony of the occasion was struck by Mr. Murphy, who read to the committee three amendments sent to him by Dr. Devine, of the Charity Organization Society of New York, and which were published in *The Survey* of March 12, 1910, as part of an article commenting on the proposed institution. The amendments were as follows:

That the Government should have a voice in the selection of incorporators and trustees.

That it should be stipulated that the annual income during the life of the endowment should actually be expended for the purposes enumerated in the charter, the indefinite increase of the endowments thru compound interest being forbidden.

That within a specified period, which might properly be a hundred years or more, any given endowment should be entirely expended, both principal and interest.

Dr. Devine did not appear to explain his amendments, the Senate Committee had no curiosity concerning them, and Mr. Murphy played with them as might a kitten with a ball of yarn. He apologized for trespassing upon the committee's time and replied to the suggested criticisms with an air of amused tolerance. Of the first he said that he did not know exactly what was meant; of the second that it struck him as almost humorous, and of the third that perhaps Mr. Rockefeller did not intend the endow-

ment to be permanent. He cited endowed universities like Harvard to prove that self-perpetuating boards and permanent endowments did not constitute a menace to public welfare. He did not think that any of the three amendments should be incorporated in the bill; the committee either did not think at all or thought likewise, and upon this record the bill was reported favorably, with the single change as to exemption from taxation noted above.

In considering the wisdom of granting a charter of such extraordinary powers, we must divest ourselves of all prejudices and look at the merits alone. It has been pointed out that Mr. Rockefeller may put a large portion of his fortune into this institution in order that it may serve as a buffer against radical aggressions, and thus protect the sufficiently large remainder. But no one should impute unworthy motives to the donor, because it is impossible to prove their existence, and again because the matter is one which can well be debated on its intrinsic merits and defects. The only point at issue is if it is safe to intrust unlimited power to an irresponsible, self-perpetuating body.

This proposed corporation, whose stated object is "to promote the well-being and to advance the civilization of the peoples of the United States and of foreign lands," may, in the furtherance of that object, engage in any kind of business, own any sort of property, buy, sell, or transfer the same at the discretion of the trustees, if they deem it "necessary or convenient for the promotion of the object of the corporation."

It is reasonable to assume that the Foundation will receive, immediately upon its creation, or at the death of Mr. Rockefeller, an enormous sum of money. Furthermore, it is unquestionably the expectation of the incorporators that other bequests will be given from time to time, for the charter provides that the corporation may "take or receive, whether by gift, grant, devise, bequest or purchase."

It is difficult to consider the three amendments separately, because the aim of each is to place vital limitations on the exercise of the vast powers granted in the instrument. In its present form the charter creates a self-perpetuating body which can go on indefinitely accumulating property. The first amendment injects a public representation or supervision into the management; the other two are much more important, for they prevent absolutely the growth of a money power possessing most menacing potentialities.

The rejected amendments are clearly the work of a man who feared something monstrous might arise out of this grant to do anything in the heavens above, in the earth beneath, or in the waters under the earth. Now, what reason is there to fear that this Foundation, so beneficent in its avowed intention, might become a scourge instead of a blessing? The experience of the past must ever be our best guide as to the probabilities of the future. It is no new thing that institutions founded with the most excellent intention, by men of stainless character and high purpose, have with increasing wealth degenerated into mighty engines of oppression, in which arrogance and self-aggrandizement took the place of self-effacement and devotion to good works. The history of medieval monasticism is filled with instances of the danger of great wealth and power in irresponsible hands.

But we have recent and remarkably pertinent illustrations which exemplify (in part) what we have to fear. Ten years ago the men who conducted the affairs of the great life insurance companies were regarded as models of probity and public spirit. A Rockefeller Foundation incorporated then would almost certainly have had some of them among its directors. Five years ago the cover was lifted for but a little while, and what a vile mass of greed and corruption was exhibited to our startled gaze. How shamelessly men of seemingly blameless life and professedly high ideals had succumbed to the temptation involved in handling mountains of money. And these companies were legally subject to visitation and examination by forty-six insurance departments; they might at any time be compelled to show their books and verify their assets by any one of the insurance commissioners of the States in which they did business. The Foundation would be practically exempt from such supervision.

True, the charter calls for an annual report of its operations, but it is certain that this report would be accepted at its face value in the case of a non-commercial corporation, and one having no fiduciary relation to the public comparable to that of a life insurance company to its policy-holders.

But after all, the insurance investigation exposed only vulgar stealing, and if the Rockefeller Foundation was eventually looted by those intrusted with its administration, no vital injury would be done to the public. A far more subtle menace to the public welfare exists in the potential use that could be made of the fund if it should be permitted to grow to any size unchecked. It would probably consist of securities, the bonds and stocks of corporations engaged in commercial and industrial enterprises. Its increase, if no such amendment as above suggested is adopted, would be similarly invested. Is it too great a flight of imagination to picture a time when the directors of this Foundation will be far more interested—for their own purposes—in the management of the investments of the corporation than in its charitable work? Is it too great a flight of imagination to picture a time when these men, by reason of their control of enormous holdings, would dominate the commercial world, and moreover, would do so with sinister effect and with the intention of maintaining and increasing their own wealth and importance? Is it too great a flight of imagination to picture a time when these men would use their delegated power to reward or punish, to build up or destroy, those who were subservient to them or those who dared oppose them? Is it too great a flight of imagination to picture a time when such a directorate would inject its influence into political affairs to safeguard its position, to prevent interference, to push forward plans that might require legal sanction—to do, in fact, the things that we know corporations have done and are doing? And let us not forget that, if such a time arrived, these dangerous activities would be carried on under the fair outward seeming of philanthropic endeavor; the livery of heaven would be used to serve the devil in.

Again, is it too great a flight of imagination to conceive this Foundation using its power in behalf of what is euphoniously called conservatism? Opposing progress on democratic lines because the men who will direct it regard as *taboo* all those reforms which tend toward real democracy?

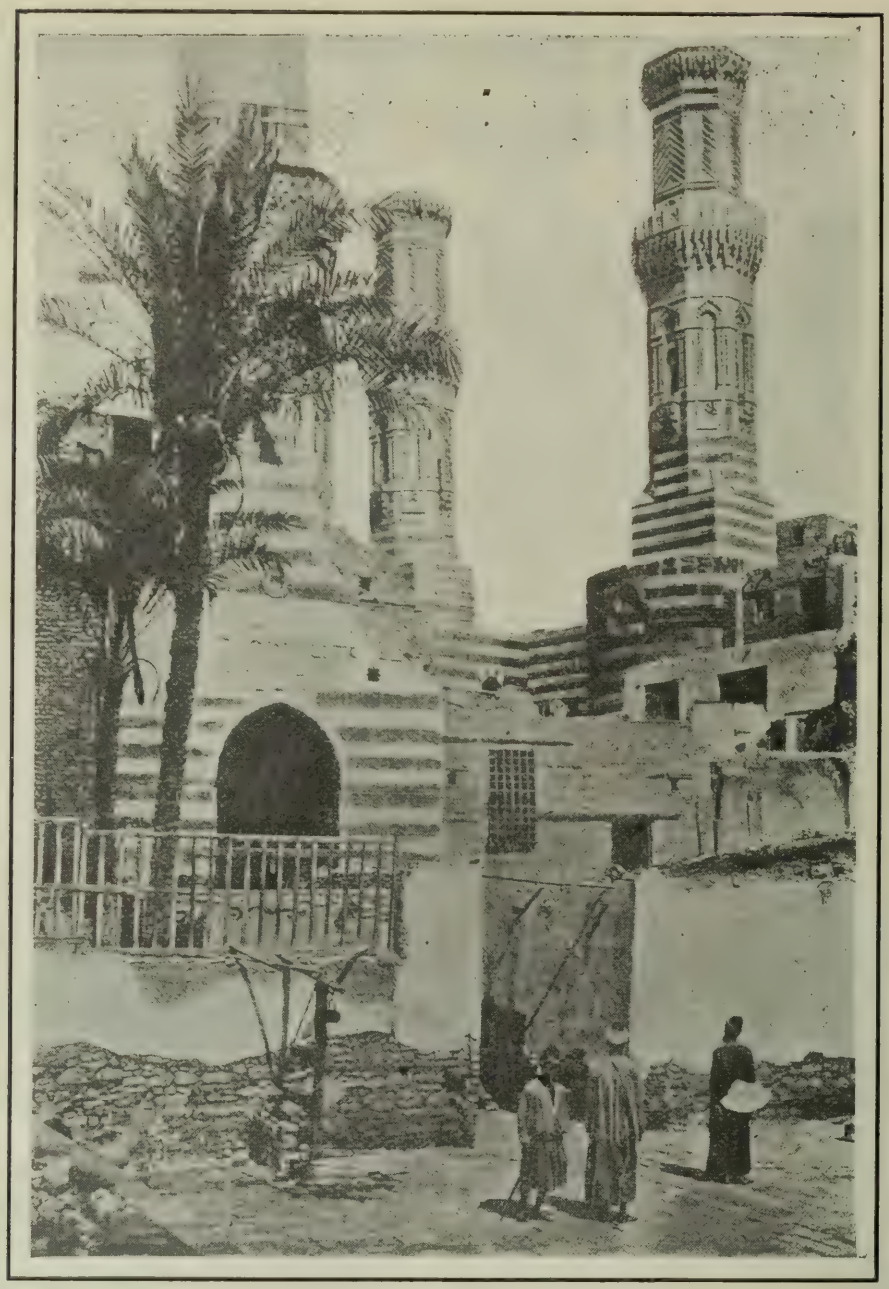
So far as Mr. Murphy's statement to the committee meets these objections to the bill in its present form, he relies upon the great universities as justification both for the self-perpetuating board and permanent endowment. But he fails to take into account that the powers of the universities are definitely and narrowly limited. Their business is to conduct an educational institution and nothing else; they have no commission to do anything and everything anywhere. He refers to the universities across the Atlantic as thousand-year-old examples of the same character. And I will refer to them, too, as illustrating one of the possibilities pointed out above. Oxford and Cambridge are entitled to certain seats in the British Parliament. Liberal or radical measures may be right or may be wrong; may interpret the popular will or may not. But right or wrong, popular or unpopular, university seats in Parliament are invariably filled by Tories, and university members invariably oppose Liberal propositions.

Since the investigation of the life insurance companies the law has compelled them to divest themselves of the stocks they held in other corporations because of the jugglery to which the door was opened by allowing men who controlled enormous amounts of money as trustees to use that money illegitimately. Men who were interested in corporations also sought appointment as trustees. Without mentioning names, it can be asserted that these unfaithful stewards were recruited from precisely the same class of business and professional men who will probably be the directors of the Rockefeller Foundation. Will they always be immune against the same temptations?

But Mr. Murphy's principal line of defense is that the bill provides that "this charter shall be subject to alteration, amendment or repeal at the pleasure of the Congress of the United States." Ap-

parently this is a valid and complete disposition of all objections. But again we must look to experience as a lamp for our guidance. If it were an unknown thing for corporate wealth and power to exercise corrupt influence upon legislative bodies, Mr. Murphy's contention would seem unanswerable. But unfortunately it has been proven to the hilt that crude bribery and more dangerously subtle methods have time and again been used to sway the action of legislators. Railroad companies, fire and life insurance companies, gas companies, oil companies—all have been guilty of such means of preventing or accelerating legislative action. And be it remembered, "they that have done these things are honorable men; all, all honorable men."

Have I drawn too lurid a picture? Have I conjured up improbabilities? My answer is that it is not necessary to prove that these things will be; it is sufficient to show that they *can be*. Such abuses do not grow up in a day. Hence it is the part of wisdom to guard as well as may be against the mere possibility of such a monstrous excrescence upon the body politic, and not to wait until the evil is fully developed and securely intrenched to attempt what would then be the herculean task of eradicating it.



New York City.

The University at Cairo

BY CHARLES F. THWING, LL.D.

[No series of articles ever printed by The Independent has excited greater interest than the fifteen articles on the Great American Universities, by Dr. E. E. Slosson, begun in January, 1909, and completed last March. It will please our readers to learn that we intend to print during the next few months four more university articles on the greatest universities of the world outside of Europe and America, namely, those at Cairo, Calcutta, Peking and Tokyo. Dr. Thwing, who has recently made a tour around the world, will write the series. He is well known to our readers and the country as the distinguished president of Western Reserve University and Adelbert College at Cleveland, Ohio.—Editor.]

THE number of the followers of Islam is variously estimated. The extremes might be set down as seventy millions and one hundred millions. This vast number is in respect to education among the most backward of all peoples which claim the epithet civilized. A majority live in India. Compared with the Hindus, with whom they are brought in constant and close rivalry, they represent a form of education far less worthy than the type which Hindu education embodies. If the value of Hindu education should be interpreted by the number ninety, Mohammedan could not worthily claim a larger percentage than ten. The causes of this backwardness are manifold and diverse. The causes obtaining in India have been noted as the love of arms rather than of learning, the presence of indolence and improvidence, the unwillingness of those of the higher class to associate with the lower, the use in government schools of text-books opposed to the faith, the memory of former superiority, and deep attachment to Mohammedan learning. There are also causes of a strictly educational character which retard Mohammedan education. Among them are: "The teaching of the mosque must precede the lessons of the school. The one object of a young Hindu is to obtain an education which will fit him for an official or a professional career. But before the young Mohammedan is allowed to turn his thoughts to secular instruction, he must commonly pass some years in going thru a course of sacred learning. The Mohammedan boy, therefore, enters school later than the Hindu. He very often leaves school at an earlier age. The Mohammedan parent belonging to the better classes is usually poorer than the Hindu parent in a corresponding social position. He cannot afford to give

THE UNIVERSITY OF CAIRO.
Exterior view.

his son so complete an education. Irrespective of his worldly means, the Mohammedan parent often chooses for his son while at school an education which will secure for him an honored place among the learned of his own community rather than one which will command a success in the modern professions or in official life. The years which the young Hindu gives to English and mathematics in a public school, the young Mohammedan devotes in a madrassa to Arabic and the law and theology of Islam. When such an education is completed, it is to the vocation of a man of learning, rather than to the more profitable professions that the thoughts of a promising Mohammedan youth naturally turn.'"[1]

The working of these causes, general in their application, so manifold and so diverse, are embodied in the chief school of the higher education of the Mohammedan world,—the university known as El-Azhar at Cairo.

The comprehensive material result seems to the eye and to the architectural sense insignificant, incomplete, historically unworthy. The building or series of buildings is approached thru narrow streets, like the Mosque of St. Sophia at Constantinople, and these buildings close-

[1] A History of English Education in India, by Syed Mahmood, page 169.

ly lean upon mean and low-lying houses and shops. But, unlike the historic cathedral-mosque of the Bosphorus, it lacks, within, hight and dignity. Neither has it any splendor of coloring. A general shopiness, and marketlike promiscuousness, a bargain-day slovenliness, seem to prevail from straw-mat covered floor to dark and grimy ceiling. The architecture is indeed remote from nobleness, and the student-world herein dwelling does not seem to be noble either.

El-Azhar is first and last Mohammedan. The place is a mosque; the teachers are priests; the text-book is the Koran. For those whose native language is not Arabic, instruction begins by learning the Arabic grammar; for those whose native language is Arabic, the Koran is at once opened. The religious teachings of the book are first learned. These teachings include the unity, the omnipresence, the omniscience of the God of many names. It also embraces the existence of angels, the written revelation, predestination, the resurrection, the judgment, the eternal life and the calling of prophets, of whom the greatest are Adam, Noah, Abraham, Jesus and Mohammed. The personal and social ethics of the Koran are also taught, including charity, hospitality, frugality, prohibition of unclean meats and of intoxicating drinks. Regular praying also represents a social, personal and religious duty. The legal teachings are not neglected, the legal teachings of the Koran representing the precepts of God in relation to the action of men. Following these lessons in jurisprudence, logic, rhetoric, the proper method of reciting the Koran, and the right pronunciation of letters represent the subjects of instruction. The method of the instruction represents the sheer lift of memory. It is such an impressing of words on the mind that the lips can fluently repeat them. Thousands and tens of thousands of Mohammedan youth can repeat all the Koran, as tens of thousands of Chinese youth can repeat the Six Books of Confucius. The task is one

ASSEMBLAGE OF STUDENTS.

of tremendous magnitude. The Koran has been translated into English, French, German, Italian and Latin. The translation of the book is, however, forbidden. Therefore, those whose native speech is not Arabic, even with their knowledge of Arabic grammar, find the learning of these hundreds of pages, more numerous than the Christian New Testament, the hard work of years. Indian, Turkish and Persian students are inclined to learn these paragraphs by rote.

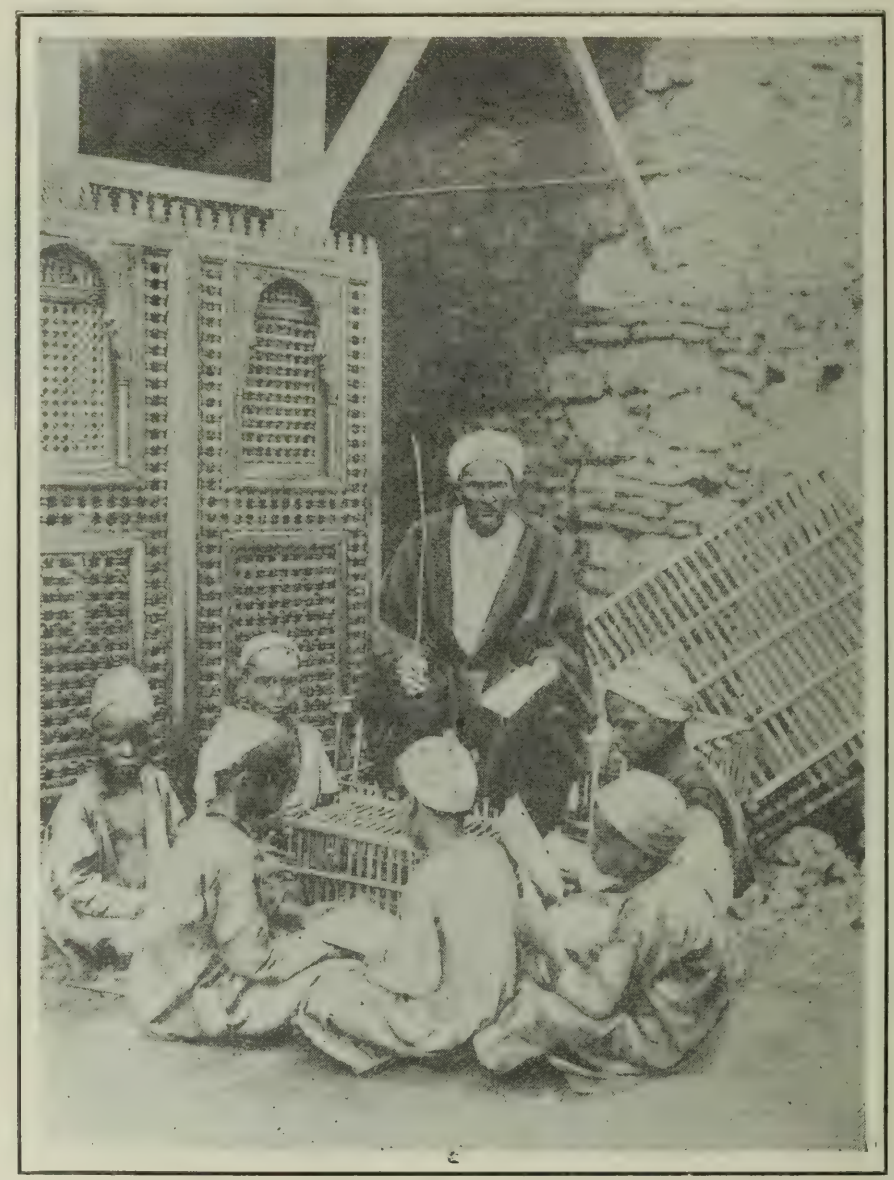
A Mohammedan learning it is which the floor, or in a low chair. About him are assembled a dozen, more or less, of men squatting in a semi-circle. The teacher is reading from and commenting on the Koran. The students listen and write. What the one imparts, what the one receives, may to the Western mind seem slight or fantastic, but more important than the presumed truth conveyed and accepted is the personality of the teacher himself. The teacher does give himself. Aristotle somewhere says that eloquence does not teach. He referred primarily to the impartation of truth;

STUDENTS OUT OF CLASS.

is thus offered. The contrast between this course and the course offered in the Western college or university is full of contrasts, wide and deep and high.

But in a single and it is a most impressive respect, the contrast is to the advantage of the institution in Cairo. This respect represents the influence of personality. In the great room covering no less than 3,600 square yards are found in different hours of the day thousands of students grouped about hundreds of teachers. The teacher sits upon but the eloquent teacher does impart himself, and imparts himself the more impressively by reason of his eloquence. The Mohammedan teacher, as I have heard him, in such capitals as Constantinople and Cairo, does give himself. Amiel said, and his practice embodied his thought, that the personality of the student is a treasure so sacred and so personal that the teacher ought not to be willing to impress upon it his own personality. No such belief or practice belongs to the Mohammedan expounder.

STUDENTS IN CLASS.



Himself he regards as one of the greatest factors in the education which he seeks to give the student.

The intellectual results of this training are for the individual, I fear, of slight worth. In answer to my question asked of a government chemist living in Cairo for ten years regarding the value of this training, he replied, "Nothing." Certainly the whole testimony, offered both in Confucian and Mohammedan countries, regarding the intellectual value of the education given thru the constant and heavy loading of the powers of linguistic acquisition is wholly against its worth. The sheer weight of a multitude of unrelated facts crush out mind. Mental atrophy results.

The evil of this result is manifest in several ways—in the lack of the use of science, in the lack of personal initiative, and in the lack of personal and common efficiency. In general, the disastrous effect of this training is seen in the want of all progressive elements of mind, body and character. In Egypt, as in most Mohammedan countries, things are as they have been, and things will be as they are. The farmer uses the same little wooden stick to plow with which his fathers used forty generations ago; and the same level which is pictured on the walls of the tombs of the kings, one finds in the hands of the carpenter today in Cairo. Egyptian character and the Egyptian types have persisted thruout all the ages, despite the engrafting of new tissue and the inflowing of new blood. As the Anglo-Saxon absorbed the conquering Norman, so Egypt has converted his conquerors, be he Syrian or Assyrian, Roman or Greek, into a being much like himself. These vast racial conditions and results are not, of course, the effects of the *memoriter* process of education, but I am sure that mere mental acquisitiveness, without reasoning, has helped on what is apparently a racial tendency.

This imitative principle of race and of religion is also made manifest by the method of living which is pursued in the El-Azhar University at Cairo. The principle of the "nations" is respected quite as thoroly as it is at Upsala. At Cairo the students from Morocco, from Turkey and other parts do not have their separate houses as in Sweden's historic school, but they do have their separate apartments in the great Mosque. In one large room live the bodies of the students of each of the different nations. On the floor they sleep, and on the floor they sit at their simple meals. On the walls are piled up the boxes containing

the few clothes that a Mohammedan schoolboy needs. It must be confest that the hygienic and moral conditions resulting from such close and constant relationships are not wholesome. But wholesomeness is a matter of relativity. It may be added that this unwholesomeness is not confined to the great building and its connected courts. It extends to the narrow streets and alleys of the whole neighborhood. Oriental filthiness and crowding, Oriental hawking and bargaining, Oriental noisiness and noisomeness beat against the walls of the institution of the higher education and help to make it other than educative.

AN ELEMENTARY SCHOOL IN THE UNIVERSITY.

All these accommodations are, at least after the first year, given to the student without charge. The education of El-Azhar is an education freer than the American public school or those the State university system recognizes or uses. The American system has seldom gone farther than to give free lunches to underfed pupils, but the Mohammedan university at Cairo offers free bed and free board. Neither is any charge made for tuition. The cost is met from endowments provided by loyal Mohammedans of the past. In fact, the teachers themselves receive no, or only small, fees, gaining their support from private teaching, from copying books, or from some religious office. Such freedom of instruction helps to explain the large number of older men whom one finds in this body of seven thousand students. Altho three years represents the normal

term, yet not a few vastly lengthen out this period of residence.

The immediate and direct result of the training given at El-Azhar is the making of the student into a teacher, or into a leader of the people of his native village. He may become a lecturer like the turbaned, black-gowned man to whom he daily listens, and whom he deeply reveres. Not infrequently when he has succeeded in learning certain parts of the Koran, he is himself made a teacher and expounder of it. Or he may return to the village whence he has come, where he will find opportunity for helping the few score or hundreds of his people.

But beyond this immediate result, and also beyond the intellectual worth of the training thus given in the most conspicuous Mohammedan school of the world, emerges the comprehensive question, What is the value of this education for the peoples of the Mohammedan race and of the Mohammedan religion? I fear that a large interpretation results inevitably in giving one answer. Not only does this training, as I have said, tend toward intellectual atrophy and stagnation, but also it promotes religious intolerance and ethical narrowness. Its influence is for the lessening of the vital elements of a progressive race. That such results are the natural and inevitable consequences of the system not a few Mohammedans,—and they, of course, the more liberal,—fully recognize.

Liberal Mohammedans are seeking to remove the forces from which such effects spring. They have indeed been seeking to found a national university in Egypt which should be worthy of the name and of the past of their country, but their endeavors have not been well conceived.

In one of the last Reports of Lord Cromer, he refers in detail to this project of a National University, as indeed in each of his great Reports he makes reference more or less prolonged to the question of Egyptian education. Lord Cromer says:

"To attain a far-reaching influence the University must have some corporate existence, its membership must be an object of ambition, and the status of student must be recognized as a serious and honorable calling. Some test or qualification sufficient to show that the student can profit by his course, a minimum number of lectures, and some sort of discipline are essential to the formation of a serious body of students. It may be presumed that the roll of students will include all those who desire a higher standard of professional attainment than can be produced from the colleges as they now exist, and also those who aspire after a liberal education in the highest sense of the term. Amongst the latter, the scheme of the University must be devised in such a way as to attract the sons of wealthy Egyptians—now a rapidly increasing body—who will come to regard the time spent in study at this University as a necessary part of their intellectual equipment for life, in the same way as in Europe, the training at the great universities is regarded by the sons of the higher classes."*

The English government in Egypt can hardly aid the efforts for a national university, for the need of primary education is even greater than the need of advanced, as it must be in a nation in which out of all public expenditures less than two per cent. are given for education. The Mohammedans of India are seeking to improve their historic university at Aligarh; but the results so far secured are slight. The causes which have for more than a thousand years retarded the progress of Mohammedan education still exist. It is to be feared that they will exist so long as superiority in arms is regarded as more excellent than superiority in wisdom.

Literature

American Crisis Biographies

THE American public has great difficulty in remembering even the names of its leaders who fall short of the Presidency and is unmindful of the fact that great policies are often the creations of these statesmen whose very prominence is the secret of their Presidential unavailability. A generation hence, the name of Mr. Bryan may be only a tradition connected, as was that of Henry Clay, with persistent and unsuccessful seeking of the road to Washington and the White House. Charles Sumner has faded until a Massachusetts schoolboy, ready for college, can say that "Fort Sumner, Charlestown, was named in his honor." Yet for half a century Clay and Sumner were dominating figures in American politics.

The new life of Henry Clay,[1] begun for the series of "American Crisis Biographies," by his grandson, and completed by Dr. Oberholtzer, is naturally a friendly and intimate picture of the great compromiser. It is not based upon any considerable amount of newly discovered material, but follows the older lives, the general biographies of the period, and the debates of Congress with care and sympathy. Clay was the most important Whig of his day. He opposed the extension of slave territory and insisted upon an American protective system. The former was the middle-century demand of the "interests" that looked upon the Government as their peculiar protector. The latter was yet under debate upon its merits and had not become the instrument of log-rolling manufacturing sections. But Clay's attitude upon either of these problems was subordinate to his loyalty to the principle of Union. For this principle he more than once risked his career.

Charles Sumner[2] had in his blood no trace of what he would have regarded as the taint of compromise. He was a generation younger than Clay, being born late enough to fall in with the humanitarian reforms that were trying to renew society. Professor Haynes has made good use of the Sumner manuscripts in Harvard Library and the ponderous life by E. L. Pierce. Necessarily slavery and reconstruction are the center of his story. Unforgiving, and with rare talents in vituperation, Sumner was at the front of the reformers from the date of his Phi Beta Kappa oration in 1846 until his death. Like Clay, Sumner was also interested in foreign affairs. In the Senate Committee on Foreign Relations he did his best and worst work, the latter in connection with Santo Domingo. Few Americans have had the wide and intimate European acquaintance that Sumner used to reinforce his knowledge of international law and that served the United States so well thruout the period of the war.

Both these biographies were well worth doing on the scale of Dr. Oberholtzer's series. Tho showing the marks of double authorship, the Clay is likely to become a standard work of reference. The Sumner is more positively a contribution in its presentation of the anti-slavery-radical from a modern viewpoint with excellent sanity and poise.

The Woman Who Spends*

THE division of labor in American life that has thrown all the burden of spending upon the women is undoubtedly the natural and inevitable outcome of modern life and industry. But that one-half of the economic process should be in the hands of men—of the enfranchised, governing class—and the other half in the hands of women, who are usually unorganized and who have no direct representation in the law-making bodies, has resulted in a state of affairs, as regards

[2] CHARLES SUMNER. *By George H. Haynes.* (American Crisis Biographies.) Philadelphia: George W. Jacobs & Co. $1.25.

*THE WOMAN WHO SPENDS. A Study of Her Economic Function. *By Bertha Jane Richardson, M.B.* With Introduction by *Ellen H. Richardson, A.M.* Second Edition Revised. Boston: Whitcomb & Barrows. $1.

the home and the final results of men's labor for their families, that is one of the most serious of modern economic problems. The fact that women—the home-making women, not the thousands who have to labor in the factories and sweatshops—are no longer producers in the same sense as were their grandmothers, whose homes were the busy workshops in which all the necessaries of life were prepared for consumption, is fully recognized. What is not so generally acknowledged is that the change has also affected men's labor; that men are no longer producers of the raw material which the husband of old brought to the wife to undergo its final stages. No longer does the man bring into the home the game and the furs, the grain and the wool, which will feed and clothe his family. The work in which most men are engaged is remote from the actual needs of his household. He may be producing, but whether he be engaged on steel rails or motor cars, on shoes, pianos or candy, it will not be any portion of his product that he will bring back at the end of the day or week. Even the farmer does not bring wheat to his wife, but sells it to the miller for money. Practically thruout the whole nation, from the point of view of the family, the man is not a producer, but a money earner; and money is what he hands to his wife for the support of his family.

To earn the money is then the first half of the necessary process of maintaining the family. The second half is to spend it, and to do this the wife becomes one unit in the great neglected army of the general consumer. To spend the money which each man earns for his family means to realize in food, in clothing, and in home, and in the less vital necessaries of life, the labor which he has performed. Just so far as the spending of money is safeguarded by good laws, guided by knowledge and correct theory, and given free scope and ample choice, just so far does man's labor become fully and completely productive of all that conduces to efficiency of life. Spending is the necessary corollary of earning. As a function it is of even more immediate importance to the welfare of the face; for it is obvious that a small wage wisely spent in a good market will keep a family in greater comfort than a much larger amount of money spent unwisely, or in a dear and restricted market. It would seem therefore natural that spending should receive as much attention from economists and lawmakers as is given to productive industry and money-getting. And yet it cannot be said that so far any real or serious attention has been given to the subject. Lawmakers and administrators, as the servants and delegates of their constituents, have no time to attend to anything which is not insisted upon by the men who have elected them, and the attention of American men has been so concentrated on money-getting that proper spending has been passed by as of little account. The women, to whom the function of spending has been relegated, find themselves in an uncharted wilderness, full of pitfalls and dangers to which they are just awakening, but which they do not know how to avoid, and are powerless to remove. Adulteration, short weight, sweatshop conditions, surround them on every side. Their market is restricted by the tariff and the trusts. They are confronted by high prices and poor quality—by paper shoes and cotton and shoddy woolens for their children's clothing, by furniture that falls to pieces, by food products made under conditions so abhorrent that they dare not think about them; and in the midst of all these dangers and perplexities, they are told, as Miss Richardson tells them in her little book, *The Woman Who Spends*, that they and they alone are responsible for these conditions; that organization in face of them is of little avail; that it is their own ignorance and selfishness that are to blame, and that if they will only individually demand better quality and right conditions of production all the evils will disappear. It is small help that the perplexed spender—say, the wife with ten or fifteen dollars a week at her disposal—will get from such pronouncements as these; but it is at any rate some satisfaction that some one has recognized the existence of the problem. Miss Richardson's book is at least a tiny ray of light shining in the wilderness which has to be traveled by the woman who spends.

Perhaps the theme may be quickly taken up by other and better equipped thinkers; and men may awake to the fact that modern conditions demand a government in which both halves of the economic problem may receive consideration, and that spending the money may in time come to be regarded as worthy of as much attention as getting it.

Italian Sculpture*

In his excellently designed and well printed large octavo volume of nearly 350 pages, Lord Balcarres has come nearer than any one else writing in English has ever done to fulfilling the ambitious program of dealing "with the whole basis of plastic art in Italy, recording the fundamental stages of progress, and analyzing the methods, theories, and ideals of the various schools of sculpture." Near the end of Chapter II, headed "Progress of Form," he says:

"In no country does the progress of plastic form, from its most barbarous stages down to the moment of supreme election, show the ordered continuity and evolution which is found in Italian art. Nowhere is the variety of form so far-reaching, the study of distance and emplacement so thoughtfully pursued, or the application of color, whether by means of paint or differentiated materials, so harmonious. In spite of ethnological disparities, and notwithstanding recurrent wars between the various states, as well as domestic feuds and revolution, the arts remained complementary; esthetic intercourse was seldom interrupted thruout the Peninsula."

After an introduction summing up the tradition of imperial art, the decadence of Western art, Oriental influences, Byzantium, iconoclasm, Ravenna, and the characteristics of the barbarian invaders; beginning with Benedetto Antelami, "as the earliest sculptor whose outlook was essentially Italian," he traces this evolution of style thru the ages down to the time of Canova, taking up successively the Progress of Form, Portraiture, Anatomy and the Nude, Religious Thought and its Plastic Embodiments, Secular Thought and Secular Form, Classical Thought, and Baroque. By 1300 the status of the sculptor was assured, the art had become a recognized vocation, the organization of guilds and corporations had laid down certain standards of work and fixed scales of remuneration. From this time onward the personality of the artist begins to emerge. Niccolo Pisano was the pioneer who recreated the secure foundations and fixed the type upon which progress was based. The development of plastic form, from bas-relief to free-standing (with an intermediate stage), from free-standing to the group, and thence to the final achievement of the equestrian statue, is outlined rapidly but luminously. In the section on Portraiture the evaluation of Bernini is especially satisfying: "Theoretically Bernini ought to have made more portraits than he did; putting aside the series of tombs, it is in portraiture that he excelled. In this particular branch of sculpture his eclecticism was restrained; his respect for truth is shown in his habit of making the subjects of his portraits move about and engage in conversation, so as to seize the living face; and finally it is difficult to exaggerate his technical skill." It seems to us hardly just to say that "it is almost a contradiction in terms to speak of Michael Angelo as a portraitist" because of his symbolic effigies of the two Medici princes at Florence; but otherwise much that is said of the great Buonarroti is excellent. All the Italian sculptors of note are analyzed. Anatomy and the nude, religious and secular thought and their embodiments are dealt with extensively, but with remarkable compression; and the chapter on Baroque contains much that is both sympathetic and new. "Baroque" the author defines as "a work of art, be it sculpture, architecture, or music, in which discordant elements are freely united, where heterogeneous parts are combined into a whole which is at once trivial and pretentious. The word is of recent application, and we are apt to misuse it, much as Vasari and his contemporaries treated the word Gothic as a compendious epithet of displeasure." Thus, Baroque sculpture is not and need not be confined within a specified period or school, nor need its tendencies be limited by any time measurement.

Lord Balcarres knows his subject as

*The Evolution of Italian Sculpture. *By Lord Balcarres.* New York: E. P. Dutton & Co. $6.

few scholars do, and his mastery of it enables him to pack a multitude of facts, deductions, interpretations, into comparatively small space. He writes well, in a style that is both swift and smooth, and this fact, combined with his fondness for his theme, his complete possession by it, one might say, makes his book highly and pleasantly interesting as well as instructive. A few attributions are erroneous or at least questionable, and there are some misprints of proper names—Verrocchio appearing repeatedly with only one "c." The index, while good so far as it goes, is not so full as one might wish. But despite its shortcomings, the book is the best on its subject that has yet appeared in English. It deserves many readers. One hundred and twenty good half-tone blocks, skilfully grouped to show the progress of Italian sculpture, satisfactorily illustrate the work and add to its value.

The Crime of the Congo. By A. Conan Doyle. New York: Doubleday, Page & Co. Paper, 50 cents.

A notice of Sir Conan Doyle's little book on the Kongo atrocities, tho belated, is always in time while the atrocities continue. Published toward the end of last year, it brings the record down to the previous June. The Rev. H. M. Whiteside, of the notorious A. B. I. R. district, asserts that the infamous rubber tax is still being collected, and that he has no doubt that it requires one-third of the time of the people to collect it. The poverty and oppression of the people are extreme, and in all the district no domestic animals, except a few miserable chickens, were seen, while "a very small bale of cloth could take the place of all I saw worn." Another report, dated the same month from the Kwango territory, declares that robbing and murder are still being carried on by Belgian officials, and two instances of brutal raids are given, in one of which an American mission was broken open and robbed. Consul Thesiger's report from the Kasai Company's district gives even more specific details of barbarities. "The native cannot complain or obtain satisfaction in any way," says the report. Each village has its capita, or head man.

> "Chosen always from a different race [these men] have no sympathy with the men placed under them, and having the authority of the agent behind them they can do as they please, as long as they insure the rubber being brought at the proper times and in sufficient quantities. In the villages they are absolute masters, and the villagers have to supply them gratis with a house, food, palm wine and a woman."

All this in the face of the fact that Belgium has promised to the world that reforms would be instituted. Sir Conan's book is a ringing call to the nations, particularly to England and America, to interfere and put a stop to these unparalleled cruelties. He gives a summary of the evidence from the early days to the present and briefly answers the apologists of the Belgian Crown. It is a book that should be in the hands of every one.

Personality and the Christian Ideal. A Discussion of Personality in the Light of Christianity. By John Wright Buckham. Boston: The Pilgrim Press. $1.50.

A generation ago Amiel declared that the great tendency of the age was "to depersonalize man." No doubt the currents of thought ran that way for a time, following the channels of analytical science, but a change has come about thru the persistent feeling that some realms of human experience cannot be explained without the "personal" factor. Professor Buckham has written his clear and interesting book as a contribution to this deeper apprehension and interpretation of life. He builds his arguments and deductions on the results of psychological investigations, yet his work is mainly philosophical and religious in its bearing. The point of departure is the distinction which the author makes between personality and individuality, the latter of which, he holds, belongs to the temporal, evolutionary and natural order, while the former is above this order, tho more or less interwoven with it. Whether Professor Buckham's distinction can be maintained in fact or not, his discussions based upon it show how valuable and fruitful it may become in thought for a proper emphasis of the moral and idealistic factors in human progress. The chapters on "The Development of Personality" and "Self-Realization" are stimulating discourses on abstruse but

weighty themes, and the later chapters will be read with great profit by all who are brought face to face with moral and religious problems. The work is an earnest and successful attempt to exalt personality and interpret man and his environment in its terms.

Literary Notes

As a souvenir for the fortieth anniversary of the pastorate of Rev. Dr. MacArthur in the Calvary Baptist Church, a little volume of *Precepts and Prayers* (E. B. Treat & Co., 50 cents) has been prepared, containing for each day of the month a morning prayer by Dr. MacArthur and an evening prayer compiled from the Scriptures.

....We welcome the first number of *The Jewish Review,* a bimonthly ($2), Bloch Publishing Company, New York. Its articles are scholarly and able, and it represents a somewhat conservative Judaism, inclined to Zionism. A criticism of Pragmatism and a careful review of Mr. Montefiore's remarkable Jewish commentary on the Synoptic Gospels have attracted our special attention.

....Those who have not tried do not realize what a different thing cooking over three sticks and a stone in the open is from the use of a range or chafing dish in the house. For tenderfeet and even for the most experienced campers Horace Kephart's *Camp Cookery* (Outing Pub. Co., $1) will be well worth study. His advice about selecting provisions with the least amount of water in them is especially useful, but he fails to appreciate the value of canned tomatoes and fruit in the arid region.

....Vanderbilt University issues the seventh volume of its "Oriental Series," in the *Cuneiform Supplement* to Prof. H. C. Tolman's "Ancient Persian Lexicon and Texts," to which is added an Index Verborum of all words in the Persian cuneiform monuments. In this volume all known texts are autographed in accordance with the latest corrections, with a compact grammatical synopsis prefixed. The volume, with Professor Tolman's previous dictionary, is an indispensable handbook for the student.

....It is an open secret that the anonymous sketches of backwoods religion entitled the "Circuit Rider's Wife," which attracted so much attention while running in the *Saturday Evening Post,* were written by Mrs. L. H. Harris, of Nashville, Tenn., who has been a frequent contributor to THE INDEPENDENT for the past twelve years. The "Circuit Rider's Wife" will soon be published in book form by Altemus. It is Mrs. Harris's first work in fiction with the exception of her "Poppy Corn" stories, and the "Jessica Letters," which were written in collaboration with Paul Elmer More, then literary editor of THE INDEPENDENT, now editor of the *Nation.*

Pebbles

TOUCHING, tender, truly terse,
The In-de-pend-ent's Eskiverse.
—A Gentle Reader.

"MINE is a trying situation," remarked Beatrice Bustle, the beautiful cloak model.—*University of Minnesota Minnehaha.*

The fond husband was seeing his wife off with the children for their vacation in the country. As she got into the train he said: "But, my dear, won't you take some fiction to read?"

"Oh, no!" she responded sweetly. "I shall depend upon your letters from home."—*London Tatler.*

THE golden-haired song bird had just bowed to her audience when a man rushed frantically upon the stage and cried:

"Is there a physician in the house?"

A young man in the third row, blushing with embarrassment, arose.

"Say, Doc," asked the man on the stage, with a jerk of his thumb toward the singer, "ain't she a beaut?"—*Everybody's.*

A BOSTON woman, said Mr. Bliss Carman at a dinner in New York, once asked Lowell to write in her autograph album, and the poet, complying, wrote the line, "What is so rare as a day in June?" Calling at this woman's house a few days later, Lowell idly turned the pages of the album till he came to his own autograph. Beneath it was written in a childish scrawl, "A Chinaman with whiskers." —*Washington Star.*

ADVICE TO PICTURE PURCHASERS.

[After Longfellow.]

Buy from some humbler artist
Whose paint gushed from his heart,
Whose family needs the money—
Help him to get a start.

Not from the grand old masters,
Not from the guys sublime,
For you* don't know much about pictures.
And are likely to get a lime.

*Oh, dear no. Not you.

"THAT will be $1.25, please," said the druggist, as he handed the white-papered, red-sealed bottle across the counter to his customer.

"One twenty-five!" exclaimed the customer, astonished.

"One twenty-five, please!" repeated the druggist.

"Come—come!" protested the customer. "Seems to me that's rather a big price, isn't it?"

"No, sir!" smiled the superior vender. "The drugs in that prescription are very costly."

The customer closed one eye, meditatively.

"You know, I'm a druggist myself," he coughed.

"I beg your pardon!" exclaimed the man behind the "patients." "Of course, I'll charge you cost price. You should have told me before. That'll be a quarter, please!"

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Our Africanus

WITH all the pomp of the most stately triumph, decreed *"pro ejus virtute et felicitate,"* did his native land welcome home the elder Scipio Africanus from his conquest of Africa; and even so do we welcome our later Africanus. The parallel may well attract us further. Said Ennius of his returning hero:

"A sole exoriente supra Maeotis paludes
Nemo est qui aequiparare queat";
("From the sunrise over the marshes of Egypt
Nowhere is there a man that can match him.")

They made him their conquering hero, *"optimus et invictissimus,"* "best and most unconquerable of men." And it was not his valor and his luck alone that they praised, nor even his strenuous swift force *"in re gerunda celeritas,"* "the speed of his accomplishment," but even more his rigid character, of which Cicero said, *"Ad honestatem omnem conatum referebat, non ad voluptatem";* "In every purpose he sought what was honorable, never his own pleasure"; so that, says the Roman orator again, *"Non in sententia solum, sed etiam in nutu residebat auctoritas";* "Not merely in his words, but in his very presence rested authority." On one occasion at a feast the host tried to crown him with laurel leaves, but the crown spread and was broken, when P. Licinius Varus cried out: "Don't be surprised that it does not fit; it is the head that is too large."

Yet there are points where the parallel does not hold. Roman writers lamented that of any writings of their Africanus, as of Socrates, not a line, not a word had been transmitted. He could not write books while on his travels and conquests as our Africanus can. And we may say that his severer language had a merrier touch than that of our hero. When Naevius gibed him he answered with a pun, *"Quid hoc Naevio ignavius?"* "What more knavish than this Naevius?" And, once more, Cato said of him: *"Nunquam se plus agere quam nihil quum ageret, nunquam minus solum quam quum solus esset";* "Never was he doing more than when he was doing nothing; never less alone than when alone"; for when was Roosevelt ever seen doing nothing?

But the general parallel is too evident to need further illustration, unless to recall the fact that Scipio Africanus was a very young man when he was chosen Consul, and that Theodore Roosevelt had served seven years as President at the age of fifty. Now coming from Africa, and beginning his triumph at Rome, it concluded here, with his usual luck, *felicitas,* on a clear day, *dies faustus,* a sunny half day after forty days of rain, when the cheering crowds of us could acclaim his triumph and make it the augury of future triumphs, and with the prayer with which the ancient augurs prefaced their divinations, *"Quod bonum, faustum, felix, fortunatumque sit."*

But enough of the pedantic; there is nothing pedantic about Teddy. He has been away from us a year and a quarter, and his departure illustrated his tact and sense. It was a fine, fair thing that he left his country so that he might not seem to embarrass his successor. President Taft's successes would be his own. Roosevelt buried himself in the wilds of Africa, resting strenuously, as no other statesman would, yet not vainly, but usefully, in an important field of science, filling our National Museum and

writing a book. Then, after a year of silence, he found his voice, and a lusty voice, in Cairo, in Rome, in Vienna, in Buda-Pesth, in Paris, in Brussels, in Amsterdam, in Copenhagen, in Stockholm, in Christiania, in Berlin, in London, in Cambridge, in Oxford, and everywhere with dignity, with force, even with that supreme tact which consists in giving plain advice without offense. Everywhere he left behind him praise, and nowhere did he give the least evidence that his head was growing too big to hold the laurel crowns. He comes back the same level-headed, plain American he was before he entered on that unparalleled triumphal march.

And what will he do now? He again shows his sense of propriety when he says that, as he has avoided all political matters during his absence, so now for two months he will not be heard in the field of politics. But then—what then? We are sure that no large pecuniary offers will tempt him. He does not ask his country to make provision for this ex-President. He can provide for himself. He will be called to service, for his country and for the world, and he will not shrink from it. He has the courage, and the people have the faith. Meanwhile, for our neighbor *The Outlook* he may be expected, very properly, to do service as a contributing editor, and his account of African experiences in *Scribner's* will be added to the shelf which contains the volumes of his works; for he is no unliterary Africanus, but the most literary, the most scholarly of our Presidents. Yet never has he been doing more than when he may seem to be doing less than usual. He will be learning the drift of things, the need of change, the enemies and the friends of progress; and then he will act and the country will hear of him and tell him what to do.

Secretary Knox's Forecast

EVERY American must feel a just pride in his country's foreign policy after reading "The Spirit and Purposes of American Diplomacy," delivered last Wednesday by Secretary Knox, at the commencement of the University of Pennsylvania. It shows that our present Secretary is not only worthily maintaining the high prestige of Hay and Root, but also that he may yet prove to be the greatest "peace" Secretary this country has produced.

A great world court modeled on the Supreme Court of the United States is close at hand as a result of the efforts of this country. The "open door" in China, which has been chiefly the result of American diplomacy, is being maintained, and our recent suggestion to neutralize the Manchurian railways and have them built in part with American capital is only following out this policy. We have led in freeing the Kongo from oppression and have befriended the Young Turks and Liberia. We have refunded the debt of Honduras and are paying that of San Domingo. In this connection the Secretary says:

"The Santo Domingo plan was vigorously opposed in and out of Congress by those who regarded it as a deviation from our policy of aloofness from participation in the internal affairs of other countries. I suppose it was a departure, but if this Government can help to upbuild its neighbors and promote the thought that the capital of the more advanced nations of the world would be better employed in assisting the peaceful development of those more backward than in financing wars, it is such a deviation from traditions as the American people will approve."

We have also, in conjunction with Argentina and Brazil, stopped war between Peru and Ecuador.

These are all beneficent advances for humanity; and while some of them originated in previous administrations, they are chiefly connected with Secretary Knox's first year of service and constitute a brilliant record of achievement.

Still, the two most remarkable parts of the Secretary's address deal not with the past, but the future.

He makes the novel suggestion that the Pan-American railroad be neutralized, a plan which, if carried out, would well nigh stop war in the New World. He says:

"It would be most desirable to see as much as possible of the great highway, which it is necessary to build to connect the Americas, built by the co-operation of the enterprise of the countries thru which it passes, and, by convention, dedicated solely to the uses of commerce upon reasonable and equal terms. The cause of American peace would be greatly advanced if its use were forbidden for military purposes in the event of internal war in

any country or in the event of war between countries thru which it passes."

Finally he concludes with this far-visioned peroration:

"We have reached a point when it is evident that the future holds in store a time when wars shall cease; when the nations of the world shall realize a federation as real and vital as that now subsisting between the component parts of a single State; when by deliberate international conjunction the strong shall universally help the weak, and when the corporate righteousness of the world shall compel unrighteousness to disappear and shall destroy the habitations of cruelty still lingering in the dark places of the earth This is the spirit of the wide world brooding on things to come.' That day will be the millennium, of course; but in some sense and degree it will surely be realized in this dispensation of mortal time."

This is the first time, as far as we know, that a responsible minister of foreign affairs of a great world Power has ever prophesied while in office the coming of the "Federation of the World" and its corollary, the reign of universal peace. As an utterance in behalf of world peace it is more far-reaching than anything Mr. Taft or Mr. Roosevelt has ever said, and places Mr. Knox at the very forefront of world statesmanship. It contains the true and final philosophy of the peace movement — interdependence for independence, organization for chaos, law for war. And when the statesman joins the poet, the prophet and philosopher, their dreams come true.

It will please the country that Mr. Knox will remain at the head of the Cabinet, and will not accept nomination as Governor of Pennsylvania.

The New Railroad Law

THE Federal statutes relating to railroads have been greatly improved by the new law. In the bill submitted to Congress by the Administration there were certain provisions which needed amendment. Some of the additions or changes proposed while the bill was pending deserved to be accepted; others did not. The bill of the House differed widely from that of the Senate, but the result of the conference was unexpectedly good. Not everything that is to be desired in such a field of legislation can be obtained in one session. The bill signed by the President last week is a long step forward.

One of the most important of the new provisions is that which empowers the Commission to take up proposed new rates on its own initiative and to suspend the adoption of them for four months, and even for ten, while inquiry as to the justice and reasonableness of them is in progress. This power is to be used at once with respect to the recent attempt of the railroads to increase their freight charges. Preference must be given to such questions by the Commission. In other ways the powers of the Commission are enlarged. When rates are to be raised, the burden of proving that they ought to be higher is imposed upon the carrier. Shippers are authorized to designate thru routes for their goods. Upon application, roads must give shippers in writing the rates to be charged for specified commodities. Officers and employees of roads are forbidden to disclose to one shipper information relating to another which can be used to the latter's disadvantage. This strikes at an evil practice which has assisted great combinations in ruining competitors.

There is to be a new Commerce Court composed of Circuit Court judges selected at first for a specified term by the President, and designated afterward by the Chief Justice. The creation of this tribunal, to which all litigation relating to the Commission's orders and work is to be referred, will expedite the settlement of all questions in that field. Discussion and amendment improved the provisions of the original bill concerning this court, and the improvement was due to the labors of the insurgents. Telegraph, telephone, and cable lines are subjected to the supervision and control of the Commission, as railroads are. This is legislation of considerable importance. A greater charge by a railroad for a certain distance than for a longer one is forbidden, with the exception that it may be permitted if the Commission decides that it ought to be. There should have been such an exception. The enforcement of State laws is not to be enjoined by a Federal court on constitutional grounds, unless the decision is made by three judges, one of them a Justice of the Supreme Court.

We thought that traffic agreements should be legalized, subject to the Commission's approval, and we regret that a carefully guarded provision to that effect was not enacted. The sections providing for official regulation of issues of stocks and bonds seemed to us so drastic that they were scarcely practicable. They were rejected, but the President procured the acceptance of a paragraph authorizing him to appoint at once a commission to inquire concerning such issues. Undoubtedly this commission's report will tend to show just what legislation on this subject the public interest requires. That part of the bill which called for a physical valuation of the railroads was rejected some time ago. Those who earnestly supported it held that such valuation is needed when the Commission is required to decide whether existing or proposed rates are just and reasonable. Since such valuation was first proposed, some have come to the conclusion that in many cases, if it were permitted to have weight in fixing rates, it would be favorable to the roads, warranting, upon the basis of appraised value, higher rates than are now charged. It is quite probable that an official valuation will eventually be required. Authority for it, however, could not be obtained at the present session.

We have said that the new law is a long step forward. We cannot at present regard it as a step toward Government ownership. It is a step toward that effective and thoro official regulation in the public interest which must be secured if Government ownership is to be avoided. It goes far beyond what Mr. Roosevelt sought in the Hepburn act, and yet it has not encountered the strenuous opposition from the railroads which that measure excited. Railroad men have become convinced that official supervision and regulation are demanded by a vast majority of the American people and must be accepted.

It is difficult to realize how great the change has been since the Interstate Commerce law was enacted in 1887. The main purpose of the authors of that statute was to prevent unjust discrimination. At that time many railroad managers could not see that their business was one rightfully subject to regulation by public authority. It was a common practice to discriminate in rates. Favors were granted to some shippers for the disadvantage or even the ruin of others. In the same way the growth of monopolies was promoted, sometimes for the private profit of railroad officers whose financial interest in the favored shipping corporations was concealed from the public. Enormous private fortunes were built up by such discrimination, the practice of which did not end with the enactment of that first statute.

The movement for official regulation has simply been one for fair play on railroad lines. It has always been opposed by railway interests, but their resistance now has but little force because railway men themselves have broader and more just views of the relation of their business to the public than they held a few years ago. The aim of all such legislation as this new law is nothing but justice. The American people do not want to ruin or oppress the railroad companies, nor will the Interstate Commerce Commission, while it is not infallible, insist upon ruinous changes which the companies ought not to be forced to accept. In any event, the companies can look with confidence to the courts for protection if it is needed. But they must understand that the people very earnestly insist upon fair play in railway traffic, and that they will continue to seek it by legislation if the laws now in existence prove to be inadequate.

California's Conversion

LAST week we had occasion to report California's repentance, in the matter of its treatment of the Japanese; and we took the liberty to say that we hoped California would do works meet for repentance. Well, she has.

The Governor of California has forbidden the great prize fight! We could not have believed it possible. California is better than we believed. He had allowed the arrangements to be made up to three weeks before the event which was to desecrate Independence Day, had shown an apparent sympathy, or indifference, and had declared that he had no power—he seemed to mean *wish*—to pre-

vent the disgrace to his State. He did not seem to think it a disgrace, rather an advertisement and an honor; one that would bring one to two million dollars into the coffers of the traders and boomers—and what is worth more than money? certainly not windy honor.

But he has seen a sudden light, as sudden and convincing as one that once shone when a man was on a bad errand on his way to Damascus. We cannot pretend to know what converted Governor Gillett, as we have not access to his psychology. It may be that he has been so bombarded by the decent people in California, those whose consciences give them discomfort, the church people, and the sober, discreet men and women who are not attached to the churches, but who love those things that are of good report, that they have overpowered, to him, the voices of the saloons and the railroad booking offices. If so it is well; it is California that speaks her conversion. Or it may be that the fear assails him that Congress may refuse to give the big exposition to San Francisco if the city and the State are so indifferent to their good repute. That would be a good reason for a change of mind, if not the best. We will not inquire too narrowly; we prefer to accept the good news, to give the full credit of it to California and rejoice that even so late she has awakened to see her wrong, her shame, and her duty.

But we are told that the fight will go on just the same, only somewhere else, and the place will be Reno, Nev. Reno, and we suppose Nevada, will welcome the bout. They had asked for it. Reno has not any pride, only greed. Even Utah, with the Mormons of Salt Lake City, refused to admit the fight and its attendant mob, but not so Reno. Nevada does not think it has any reputation to lose; so why should its saloons not pick up the money? It is, in population, much the smallest of all the States of the Union, the runt of the States. It had at the last Census fewer people within its empty borders than Covington, Ky., or Lancaster, Pa. So Nevada remains, to its shame, the last of the States to hold out glad hands to prize-fighters and the bloated crew that admires and follows them. But we tell Nevada that this is its last time thus to serve the devil. This disgrace will pour down on the State the reproaches of the whole country. Just as universal condemnation and disgust compelled Mormonism to get a new revelation on polygamy, so will Nevada be plagued into decency. The last refuge of brutality will have to yield, for right has a longer and stronger arm than wrong, if it is a little slow to move; and the brutes will be invited to move on to Alaska and the Pole or to the bull-fight arenas across the Southern border. Meanwhile for the last time we endure, *in vili corpore* our national disgrace.

But we congratulate California. She has achieved her moral climacteric.

A Questioned Benefaction

Mr. Portenar's alarm over the conditions of the Rockefeller Foundation asking incorporation by Congress is shared by another able sociologist whose opinion of the argument we sought. So far as we can see any defense turns on two points—on the one side it may be said that the possibilities suggested are too monstrous to be desired or considered; and on the other side that the right of Congress to amend or repeal the charter gives the people full authority. Yet it appears to us that the amendments proposed should be incorporated in the charter. The purposes evidently in the minds of the incorporators are so worthy that the plan was received by us and by the public generally with great satisfaction. Our correspondent says:

Mr. A. J. Portenar has rendered the American public an important service. The bill to incorporate the Rockefeller Foundation has been discussed in every newspaper, and many objections to it have been raised. But no one has scrutinized its merits as Mr. Portenar has done. His article will necessarily receive attention and will raise grave doubts. It is not often that a question of public policy is subjected to an analysis at once so good tempered and so remorseless.

Certain things are, we suppose, admitted in regard to this project. The avowed object is "to promote the well being and to advance the civilization of the peoples of the United States and of

foreign lands." The means to be employed for so worthy an end will consist of a fund much larger in amount than has ever before been devoted to philanthropic uses under one management. The agent to which the responsibility will be entrusted will be a corporation, created by Congress, and subject to the right of Congress at pleasure to alter, amend or repeal its charter. The initial powers of the corporation are to be larger and more loosely defined than those of any American corporation now in existence, so far as we are advised. In furtherance of its object the Foundation, it is understood, may engage in any kind of business, own any sort of property, buy, sell, or transfer the same at the discretion of the trustees, if they shall deem it "necessary or convenient for the promotion of the object of the corporation."

Following Mr. Portenar's polite method, let us enquire, without animadversion or insinuation, and in the cold-blooded spirit in which a lawyer would examine the terms of a contract, what concrete things besides promoting education, religion and urbanity among men, the Rockefeller Foundation might immediately begin to do under its liberal authority.

Obviously it could begin, if such a course seemed to it "convenient," by taking over the business of the Standard Oil Company and its auxiliary grocery stores, candy enterprises and restaurants, a continental railroad or two, three or four of the principal department stores of each city in the United States, the United States Steel Company, the American Tobacco Company and the United Cigar Stores, an indefinite number of Atlantic and Pacific steamship lines, the Swift and the Armour meat packing businesses, an indefinite number of mining enterprises, a million or ten million, more or less, of American farms—*and, in short, any and every industrial or other business enterprise now carried on in the United States, provided the parties now owning them could be induced or compelled to sell.* In a word, the Rockefeller Foundation, under the proposed charter, and so far as that charter is concerned, could become the principal employer of wage earners and salaried men in America, the largest employer in the entire world, *and could employ more human beings than all other employers in the world put together.*

So much for the industrial power which it is proposed to create; but that is only a beginning. The sane suggestion of Dr. Devine that the annual income of the fund should actually be expended every year for the purposes enumerated in the charter, thereby preventing the indefinite increase of the fund itself by compound interest, has been laughed to scorn. That is to say, the actual proposition is, that the fund shall be permitted to grow indefinitely. This proposition admits of but one possible construction. The foundation can go into the banking business, and beyond the slightest doubt it will. It can buy up and consolidate banking interests thruout the United States. It can be to all intents and purposes the central bank of the country. It can become more powerful than the United States Treasury—more powerful than all existing banking institutions put together. It can become more powerful than any existing money power in any part of the world, *more powerful than any money power that has ever existed in human history.*

What then? Given its two supreme powers, namely, the power, first, to employ more wage and salary earners than all other employers put together; the power, second, to control more loanable capital than all other funds of loanable capital put together, what can the Rockefeller Foundation do with these powers? Well, by way of "promoting the well-being and advancing the civilization of the peoples of the United States and of foreign lands," it can, if it finds such a course "convenient," "gently induce and persuade" wage earners who have wives and children to feed, and business men in need of accommodation at the bank, to refrain from voting for Congressmen whose legislative influence might be inimical to "civilization" as construed by the trustees of the Rockefeller Foundation.

The bill to incorporate the Rockefeller Foundation should be redescribed. It should be entitled, "A Bill to Incorporate the Rockefeller Foundation and to Vest in the Trustees of Said Foundation

the Political Sovereignty Now and Heretofore Lodged in the People of the United States."

American Medical Education

We have had a number of things in the last few years to take down our high-blown pride in American education. Criticisms of our scholarship from many directions have shown us that we may "have been swimming on bladders this many summers in a sea of glory, but far beyond our depths." We have been doing some good work, but we have been doing much more that only by the emptiest conceit could be considered good work. It is a little bit hard to get to know the worst all at once, but we are lusty and vigorous enough now to stand criticism and benefit by it. Therefore does it seem good that most of the beginning of this twentieth century has been occupied by criticism of our educational methods and results, for the future depends on our waking up to realities and not letting ourselves be lulled into fancied security, that with American enterprise and ambition and young incentive we must be doing good work, while all the time we may be making serious mistakes in organization, in methods, in subjects. There is no doubt that we have the vigor to do things well, if we only set about doing them the right way. Where we have failed to in the past it has been because we went at it the wrong way. What we need is guidance in the right path, and that is evidently coming from the friendly critics, who, tho severe, are deeply interested and are constructive and not destructive.

The last department of education to come under the fire of the critic is medicine. We have headed this article "American Medical Education," but the Carnegie Foundation for the Advancement of Teaching has called its Bulletin No. 4 "Medical Education in the United States and Canada." Surprising as it may seem to us in the United States, Spanish-American medical education probably deserves none of the strictures that are placed upon that in English America. Medical schools in Mexico and in South America were always coordinate departments of the universities, demanding thoro preliminary training. Medicine was considered genuine post-graduate work, and at least four, and sometimes five or six, and in one country at least seven years of medical study were required before the degree of doctor of medicine was conferred. Here in the United States, until a generation ago, that is to say, thirty-five years ago, no medical school required more than two terms before conferring the degree of doctor of medicine. These two terms were of four months each, so that it would be quite wrong to speak of them as years, and one good school whose graduates passed the best examinations for the army and navy, gave its two medical terms of four and a half months each in the same calendar year.

This is not the whole story, however. No preliminary education at all was required. If a man could write his name, and he did not have to do that any too plainly, he would be admitted to a medical school, and provided he paid his fees, as a rule he would be graduated, because to have many failures in examinations made a school unpopular and deprived the professors of fees that they were very anxious to secure and augment. A man might come from the farm then, or the smithy, or from before the mast, or from any trade or occupation, and after two years he would be graduated as a physician. Until about thirty years ago the diploma that was given him was also a license to practise in any State in the Union, for there was no regulation of the practice of medicine by law beyond this. As was well said not long since, it was a license not to practise medicine, the Lord knows! but to practise on his patients until he learned some medicine. Out of this slough of despond in medical education we have risen in the last thirty years, until now most of the medical schools of the country require four years, nearly all of them demand a high school training, a few of them insist on a year or more of college work, and one, but only one, insists upon a full undergraduate training before a man shall be allowed to enter its post-graduate professional department of medicine.

The present report of the Carnegie Foundation shows how much remains

yet to be done if our medical education is to be brought up to anything like the standard that it ought to have. The difficulty in the past was that the medical schools were proprietary, that is, they belonged to the historic septennate of professors, the immortal seven, who taught in the seven departments considered necessary for medical training, employed some assistants and divided among themselves the fees. Occasionally men held two chairs out of the seven, anatomy and surgery went very naturally together; sometimes such disparate departments as physiology and midwifery were united in the same hands. Physiology and medicine went rather well together, but when pathology and obstetrics or still more surgery were combined then results could be looked for. Sometimes the school practically belonged to one man. He hired the professors and took all the profit. Naturally the less equipment, the less laboratory work, the less time the more profits. Unfortunately this system of proprietary medical schools has not been entirely abandoned. Indeed the majority of our medical schools are still of this kind. Even schools that masquerade under the name of a university, sometimes even a State university, are proprietary schools. The bother was, of course, that many even of our best universities a generation ago allowed such schools to exist supposedly under the egis of the university.

With medical teaching as a money making business, it is easy to understand that a great many more medical schools came into existence than there was any necessity for. The Carnegie report says:

"First and last the United States and Canada have in little more than a century produced 457 medical schools, many, of course, short-lived and perhaps fifty still-born; 155 survive today. Of these Illinois, prolific mother of 39 medical colleges, still harbors in the city of Chicago 14. Forty-two sprang from the fertile soil of Missouri, 12 of them still 'going' concerns; the Empire State produced 43 with 11 survivors; Pennsylvania 20, with 8 survivors; Tennessee 18, with 9 survivors. The city of Cincinnati brought forth about 20; the city of Louisville 11. These enterprises—for the most part they can be called schools or institutions only by courtesy—were frequently set up regardless of opportunity or need; in small towns as readily as in large and at times almost in the heart of the wilderness."

Fortunately the frankly proprietary schools are now dying out. Much remains to be done, however, in the work of removing the vigorous weeds that grew up in the field of medical education, tho the Carnegie Foundation's report will do more than anything else to rid us of the undesirables.

There is just one ideal that must be striven for in medical education and that is that every medical school shall have an organic connection with the university and shall be, in fact, a post-graduate department of the university. Sixty years ago Nathan Smith Davis, at the beginning of the movement for the formation of the American Medical Association, declared that there were two needs in American medicine. First, young men received as students of medicine should have suitable preliminary education—second, a uniform elevated form of requirement for the degree of M.D. should be adopted by all the medical schools in the United States. We are far from that yet, but we know our shortcomings. We have entirely too many doctors; and just as much as the new standard will cut off this supply to some extent the result will be beneficial. During the past year twelve of the proprietary medical schools closed their doors. Under the strong light of publicity now thrown on them others will wither up. We must have university medical schools in smaller number than before, and then our supply of physicians will be not only adequate but suitably educated. In the meantime the public must be educated up to look for a high standard of qualifications and not mere pretense and pseudo-scientific presumption in its physicians.

European Comment on the "Deluge" Fragment

EUROPEAN scholars are beginning to come forward with their opinion of the new "Deluge" fragment which, our readers will recall, was announced in a somewhat sensational manner by Professor Hilprecht about two months ago as the "oldest version" of the Babylonian tradition.

Dr. T. G. Pinches, of University College, London, whose supposed endorsement of Professor Hilprecht was widely quoted in the press, appears to have changed his mind to judge from a note attached to an article from his pen on the subject in the *Expository Times* for May. He now accepts as more probable the later date assigned to the fragment by Professors Clay and Barton. More emphatic in his assertion that the fragment has no special bearings on the Old Testament versions of the Deluge is Professor Bezold, of the University of Heidelberg, in an elaborate discussion in the *Frankfurter Zeitung* of May 21. He scouts the idea that there is any direct connection between the new fragment and the "Priestly Code" and believes that Clay and Barton have given satisfactory evidence to show that the tablet may date from the Kassite period. Moreover, Bezold does not accept any of Hilprecht's proposed restorations. The position taken in THE INDEPENDENT (of March 24 and April 7, 1910) is practically endorsed by Professor Kittel, of the University of Leipzig, in the *Theologische Litteraturblatt* of May 21, 1910, that there is too little preserved of the fragment to warrant any large conclusions, and that there is nothing to show that this version is closer to the Biblical accounts than the one found many years ago in the Library of Ashurbanapal, Dr. Hilprecht's endeavor to connect the Hebrew word *min,* rendered by all ancient translations of the Hebrew text and by all modern scholars as "kind," with a Babylonian term *minu* "number" is definitely set aside by Professor Kittel, who pertinently points out that instead of restoring the twelfth line of the fragment "creeping things two of everything," one might just as well supply "seven" of everything and thus obtain a parallel with the "Jahvist" version instead of with the "Priestly Code."

Professor Hommel, of the University of Munich, on the other hand, unconsciously introduces a touch of humor into the otherwise solemn discussion by improving on Professor Hilprecht's conjectural restorations. Professor Hommel is a most learned but also somewhat erratic scholar who delights in bold hypotheses many of which do not endure the test of criticism. His restorations of the little fragment (published in the *Expository Times* for May, 1910) are so amusing that it seems wrong to withhold them from American readers.

In the second line where only one word is to be seen and which Hilprecht renders "I will loosen," but which may also mean as Bezold and others have pointed out, "I will remove a ban" or "I will reveal a secret," Hommel, instead of accepting Hilprecht's restoration ["The confines of heaven and earth] I will loosen," proposes to read ["The springs of the deep] I will open" and thus obtains a closer parallel to Gen. 7, 11, "The fountains of the great deep were broken up." In line 6, where the only words preserved are "build a great ship" and where even Dr. Hilprecht refrains from any restoration, Professor Hommel undaunted fills in the line as follows: ["Take wood and pitch] and build a great ship." In this way he obtains another interesting parallel to the Biblical story. Finally in the now famous line 12, where to the two words to be seen—both of them doubtful—and which certainly do not mean "instead of a number," Professor Hilprecht adds: "Creeping things two of everything." Professor Hommel prefers: ["Reptiles two of each] instead of (their whole number"). The picture thus suggested is a remarkable one of the Babylonian Noah taking reptiles into his ship. The hero of the Babylonian Deluge is called in one part of the story "the very clever one." One might doubt his right to this title if he acted in the manner attributed to him, for why should he have taken any reptiles into the ship? Perhaps Professor Hommel can explain this.

Preparing for Adjournment

Congress is hurrying thru its business with commendable speed. Besides the Railroad Bill, of which we have treated elsewhere, other nearly as important bills have been expedited with a view to early adjournment. As important as any is that for the admission of Arizona and New Mexico. This is an act of justice too long delayed. The two Territories refused to accept the act passed by the last Congress uniting the two into a single State, and they did right. They are large enough for two States. Congress seems to have delayed for a very bad reason, the fear that the

States might send four Democrats to the Senate. If the States should be Democratic they would have a right to send men to suit them, and to refuse them the right is both undemocratic and unrepublican. For this reason we do not like the provision which would delay their representation for two years. It is small politics. It is another great victory that at last we are to have the postal banks. Our postal system is far behind that of other civilized countries, and it has been corporate interests that have stood in the way of public advantage. For twenty years one Postmaster-General after another has asked this benefit for the people, but Congress has refused, until now it can be refused no longer. At last President Taft has his innings.

To Fight Socialism

A society has been launched in this city to fight Socialism, and it proposes to fight it all over the country. Its president is a Methodist clergyman of this city, the Rev. John Wesley Hill, who has been preaching against Socialism for some time, and its first vice-president is Archbishop Ireland, of St. Paul, and the second is Peter W. Collins, secretary of the International Brotherhood of Electrical Engineers. Other officers of note are, of the Catholics, Archbishop O'Connell, of Boston; Mgr. Lavelle, the Rev. John J. Wynne and Claude B. Pallen, of the editorial staff of the Catholic Encyclopedia. There are several well known Jewish rabbis, Drs. Grossman and Schulman, and of college presidents, Dr. Reed, of Dickinson College; Dr. Shanklin, of Wesleyan; Dr. Smith, of the Ohio Northern, and Dr. Thwing, of Western Reserve. Among the bishops are included Dr. Darlington, Episcopal Bishop of Western Pennsylvania, and the Methodist bishops Cranston, Warren and Mallalieu, and of other names we mention Dr. Slicer as field organizer; Dr. Cadman, of Brooklyn; Charles D. Hilles, Assistant Secretary of the Treasury, and Congressman Bennet, of New York, besides several representatives of labor organizations. It is a very composite body of men, evidently frightened by the progress of Socialism. In an address one of the members spoke of the public school as a socialistic institution. Such it is, and so far the country has been socialistic from the beginning, as it is also in post office, highways, parks, etc.; and we are going farther in socialism by establishing a postal banking system. The reason why it does not seem important to fight Socialism is that we need more of it, particularly in railroads and telegraphs; and, further, when it comes to practical measures Socialism moves slowly, a step at a time, asking if the people approve it. Thus it is in Europe, where the progressive side joins Socialists in public measures, not that they believe in extreme abstract collectivist Socialism, but that they want more privileges for the people.

President Hadley tells the Yale graduating class, in his baccalaureate sermon, that this is an age of faith and a land of faith. He added most admirably:

"We sometimes hear a contrary opinion expressed. Many good people will tell you that this is an age when faith has decayed, an age when the human race has lost its belief in the things which are most necessary to its life here and hereafter. This is a wrong view. We have lost faith in some things, but we have gained faith in others, and the faiths that we have gained are greater in number and importance and inspiration than the faiths we have lost. We have lost faith in signs and portents and supernatural manifestations of power, in certain dogmas and formulas once supposed to be essential to salvation. We have gained in their place faith in man, faith in law, faith in the truths of nature and faith in the God of justice."

But even more, faith in the God of love.

After all these years the Catholic Cathedral in this city has been freed from its immense debt on the occasion of the fortieth anniversary of the ordination of his Grace Archbishop Farley. It is a great achievement, which claims our congratulation. We notice that the address of the clergy opens by calling him "Your Eminence," a term which belongs to a cardinal; but coming events cast their shadows before.

So long as negroes are not allowed the privileges of the two public parks of Memphis, Tenn., it is only decent and right that provision has just been made to give them a good park of their own. But what a curious freak of sentiment that should require this separate provision.

Insurance

Retire the Equitable Stock

As THE owner of not less than 502 shares of the capital stock of the Equitable Life Assurance Society, for which he is reported to have paid $2,500,000, Mr. J. P. Morgan dominates the affairs of that half billion dollar institution. Altho the company is not now any more in Wall Street than it was under the elder Hyde and his associates, its control by first one and then another master of finance has been palpable to the general eye for the past five years, and if that fact has not been actually prejudicial to its interests, it is because the public accepted at their face value the promises made respecting mutualization within a reasonable time.

Actual opposition to the ownership of these vast interests by the money powers of New York City was originally neutralized by lodging the ostensible control in the hands of three trustees, headed by former President Cleveland, under a five-year agreement which contained a provision for its continuance over a second period of five years. But Mr. Cleveland is dead, the deed of trust has expired, and the two surviving trustees have resigned. The absorbing question now is, What will Mr. Morgan do?

Doubtless the Governor and Superintendent of Insurance of New York have had the problem under consideration, and perhaps they have been in correspondence or conference with the representatives of Mr. Morgan. There are strong reasons for the belief that the Governor and Superintendent are determined that the transformation of the company from the stock to the mutual form shall be effected, if that can be legally accomplished without injustice to the stock interests. The difficulties to be overcome, tho few, are real. While more than one-half the stock is in the possession of one person, the remainder is divided among many, and these may prove to be troublesome factors in the way of a satisfactory settlement of the question. However, the attempt must be made, and persisted in, to relieve the Equitable of its stock domination. Perhaps the mutual form of organization is just as susceptible of control by the large financial interests as is the stock form, but it possesses at least one advantage—a mutual management can be expelled without injuring any so-called vested interests, a proceeding which bristles with difficulties when attempted in connection with a corporate government resting on a proprietary basis, as we see in the present instance.

Under the deed of trust previously alluded to, the policy-holders of the Equitable are presumed to have elected twenty-eight of the fifty-two members comprising the board of directors, a majority of four, and while it is conceded that the entire board is quite as representative of policy-holders' interests as the boards of most mutual companies, the substantial fact is that the directors of the company are all servants of the stock element.

The ownership of Equitable stock at its present speculative value is ruinously unprofitable as a legitimate investment, limited as it is by law to 7 per cent. of its par value. Desire for its control must necessarily rest solely in the fact that it commands the custody and movement of nearly five hundred millions of cash and securities. This wealth is rapidly increasing every year and constitutes a temptation that should not be afforded to any small number of individuals. Retirement of the stock by purchase out of the surplus of the company, at a price that is just to policy-holders and stockholders, is the only remedy against future trouble, and now that the question of mutualization has become acute, it would seem to be wise for all parties to come to an understanding under the supervision of the State Insurance Department.

Financial

The Wages Movement

WAGES are still rising. Last week, by arbitration under the Erdman act, the 2,100 telegraphers employed by the Southern Railway obtained an increase amounting to $88,000 a year. A strike of conductors and trainmen on thirteen railroads east of the Mississippi and south of the Ohio was averted by referring the controversy to Chairman Knapp and Labor Commissioner Neill, for mediation under the Erdman act. In all probability an increase will be awarded. The workmen employed by the independent tin plate companies ask for an addition of 10 per cent. in the new scale to be adopted after July 1. In Yonkers, N. Y., the street railroad men are on strike for an addition of 20 per cent. The road is in the hands of a receiver, who says he can make no change except by order of the court. In sharp contrast with the movement in many industries is the curtailment of output by manufacturers of cotton and woolen cloth. In New England, 40 per cent. of the machinery of the woolen industry is reported to be idle. Many cotton mills are running only four days in a week, as manufacturers say they cannot get the prices which the high cost of raw material requires.

Cotton Speculators Indicted

As a result of the Government's inquiry concerning a pool of speculators in cotton, several millionaires were indicted last week in New York for violation of the Sherman act. The list is as follows:

James A. Patten, of Chicago, who made a large fortune in wheat before he turned to cotton; William P. Brown and Frank B. Hayne, of New Orleans, highly successful brokers and speculators in the Southern cotton market; Col. Robert M. Thompson, of New York, a capitalist deeply interested in naval affairs, who was prominently mentioned for Mr. Taft's Cabinet, and who is connected as a special partner with the cotton brokerage firm of his son-in-law, S. H. P. Pell; Eugene G. Scales, of Texas, a daring speculator in cotton; Charles A. Kittle, a member of the Pell firm; Sydney J. Harman, of Louisiana, a cousin of Mr. Scales and a cotton dealer; Morris B. Rothschild, of Mississippi, planter and operator.

It was charged some time ago that these men had combined to corner the cotton market and exact a high price from spinners, but the proof was not published. These indictments, however, contain copies of a long agreement, dated February 26, 1910, made by Brown, Hayne, and certain manufacturers, providing for the purchase of 300,000 bales. The agreement bound the subscribers not to offer this cotton, or any other cotton owned by them, on the Exchanges at New York, New Orleans or Liverpool "prior to November 1, 1910." This seriously affects the claim hitherto made by the speculators that they were free to sell, and were selling, their cotton to manufacturers generally as fast as it came into their possession. It furnishes much support to the Government's case and shows why the Department of Justice was satisfied (as the Attorney-General says in an explanatory statement) that here was a combination having criminal characteristics, a combination made for the purpose of forestalling the market, practically monopolizing the visible supply of cotton, and securing power to dictate prices to the consumer.

....Net earnings of the railroads in April were greater by about $3,500,000 than in April a year ago.

....Canada's bounty last year on lead ore delivered at Canadian smelting works for treatment was $340,542.

....Canada's wheat area this year exceeds that of 1909 by 1,554,000 acres, or 20 per cent.

....There are now 7,123 national banks, with authorized capital of $992,997,635 and bond-secured circulation amounting to $683,254,858.

....The output of copper in the United States, Canada, Mexico and Cuba in 1909 was 1,285,809,280 pounds, against 1,098,036,214 in 1908.

....The gold output of Australia and New Zealand in 1909, was $70,907,670, against $73,314,671 in 1908. Since 1903, when the output was $91,755,000, there has been a steady decline.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JUNE 30, 1910 No. 3213

Survey of the World

End of the Session of Congress

The first regular session of the Sixty-first Congress ended at 11 o'clock on the night of the 25th, without the customary singing and other expressions of joy, owing, it is said, to the depressing effect of Senator Gore's charges of bribery, and to the order for an investigation. It was generally admitted, however, that at no other recent session had so much important legislation been completed. Some account of the bills enacted is given in our editorial pages. The President was actively interested in the pending measures. When there was danger that the bill for postal savings banks would fail by disagreement in conference, he gave up his projected visit to New Haven, where he had intended to be present at the graduation of his son. To his great satisfaction, the House bill was accepted by the Senate. It permits the investment of 30 per cent. of the deposits in Government securities, and the remainder (5 per cent. excepted) may be so invested when, in the President's opinion, the general welfare requires this to be done. The House's reduction of the issue of reclamation bonds from $30,000,000 to $20,000,000 was accepted by the Senate. The Campaign Publicity bill, as enacted, provides for publicity only after election. The bill authorizing an expenditure of $11,000,000 in five years for White Mountain and Appalachian forest reserves was passed in the House, but the Senate will not vote upon it until February 15 next. The report of the Ballinger investigation will probably be prepared in September.——By a vote of 152 to 105 the House had insisted upon its amendment to an appropriation bill providing that no part of the money given to be used in enforcing the Sherman Anti-Trust law should be expended in prosecuting combinations of workingmen. This attempt to exempt labor unions from the operation of the law in the case of a boycott was not approved by the President. A telegram protesting against his opposition was sent to him by the convention of the Locomotive Engineers' and Firemen's Brotherhood. He replied by telegraph, saying:

"The Supreme Court decided that a boycott is a violation of the Sherman Anti-Trust law and this proposal is an attempt to withhold the means of prosecuting that law when it is violated by a particular class to be made privileged. I am entirely opposed to such class legislation. If it was proposed to amend the language of the Sherman Anti-Trust law itself so as somewhat to narrow its scope, that would present a proper question for consideration, but so long as the present Anti-Trust law remains upon the statute books an attempt to modify its enforcement so as to render immune any particular class of citizens, rich or poor, employers or employees, is improper legislation and in my judgment ought to be opposed by your Brotherhood. The laboring man and the trade unionist, if I understand him, asks only equality before the law. Class legislation and unequal privilege, though expressly in his favor, will in the end work no benefit to him or to society."

Owing mainly to his disapproval of the proposition, the House, on the 23d, reversed its action and voted, 138 to 130, to agree with the Senate in excluding the exemption.——The President did not sign the River and Harbor bill, which appropriates $52,000,000, until the 25th, and then he sent to Congress a message severely criticising it and saying that at one time he had reached the conclusion that it was his duty to interpose a veto. He had afterward changed his opinion, because the bill had many good features and the failure of it would embarrass the constructing engineers and cause loss. He emphatically expressed his disapproval of the "piece-

meal" policy pursued with respect to appropriations for many of the projects, several of which ought to be abandoned, and urged that there should be reform in the preparation of such bills, saying that a failure to adopt reform would justify a veto next time.——He caused to be published on the 23d the following statement, to which his signature was attached:

"I am elated at the legislation which has been enacted by this Congress. It has fulfilled the pledges of the party. It is a great satisfaction to me that we have accomplished so much. It has been the custom in the past to try to fulfill party pledges during the term of the President elected; we have secured what we set out to get during the first regular session of Congress. We now have the best railroad regulation law we ever had. The provisions for the supervision of capitalization were omitted, but this does not mean that they have been abandoned. Renewed effort to enact them will be made at the next session. I think the party in power has enacted legislation which will inure greatly to its benefit. It has kept its contract. The Congress which is now closing its first regular session has done what it promised the people to do, and the Republican party has a good record to take to the people in the coming elections."

Senator Gore's Charge of Bribery

Thomas P. Gore, the blind Senator from Oklahoma, asserted in the Senate on Friday last that a bribe of from $25,000 to $50,000 had virtually been offered to him, presumably in the interest of certain lawyers and others who hold contracts for the sale of the unallotted lands of the Choctaw and Chickasaw Indians in Oklahoma. These contracts, he said, would yield to the lawyers at least $3,000,000. In the House it was asserted that the lawyers' commission fees might amount to $16,000,000. A Senator, a Representative and two ex-Senators were affected by Mr. Gore's charges. He had procured the insertion in the General Deficiency Appropriation bill of an amendment providing that all contracts for the sale of the lands in question should be null and void unless approved by Congress. In conference this amendment was so changed that it required the approval of the President and the Secretary of the Interior, and also so modified that, in his opinion, it would compel the acceptance of existing contracts for land worth $30,000,000, on which the lawyers would collect 10 per cent. Owing partly to the opposition of Senator Gallinger, he could not recall the conference report, which the Senate had accepted, but his charges were repeated in the House, where the report was rejected. Mr. Gore said in the Senate that on May 6 he had been approached by a resident of his home town, a man who had been his friend in time of need, who told him $25,000 or $50,000 would be available if he should induce the committee or the conferees to drop the amendment which he had caused to be accepted; that he understood a similar offer had been made to a member of the House; that he had been informed that an ex-Senator from Nebraska, an ex-Senator from Kansas, and Cecil Lyon, chairman of the Texas Republican Committee, were interested in the contracts, and that a large lobby was maintained in Washington, in behalf of the contracts, by J. E. McMurray, the lawyer who owned a majority of them. McMurray some time ago collected $750,000 in fees upon similar contracts. Mr. Gore also asserted that a member of the Senate and a member of the House were interested in the scheme. He was willing to give names to an investigating committee. It was afterward shown that the Representative he had in mind was Mr. McGuire, of Oklahoma, who had suggested the change in conference; also that the two ex-Senators were Mr. Thurston, of Nebraska, and Mr. Long, of Kansas. In the House the movement against the changed amendment was led by Mr. Murphy, of Missouri, who said that the lawyers' fees would be from $4,000,000 to $16,000,000. He exhibited a specimen contract. There are more than 2,000,000 acres of agricultural land, besides 446,000 acres which will yield coal or oil. On the following day Mr. McGuire, asking for an investigation, said he had proposed the substitute at the request of representative Indians. He believed that it would guard the Indians' rights. It appears that ex-Senators Thurston and Long have been acting as counsel for Mr. McMurray. Mr. Thurston sent a letter to the Senate, denying that he was interested in the contracts, saying they were legal and would be of great advantage to the Indians, as-

serting that McMurray had maintained no lobby, and declaring that no one had offered a bribe in his behalf. He demanded an investigation. Mr. Lyon said that, while he had been interested in such contracts some time ago, he had no interest at present. Mr. McMurray, remarking that he had represented the Indians for twelve years, defended his contracts and denied that an attempt to bribe had been made by any one acting for him. The Senate ordered an investigation by a special committee of five. Similar action was taken by the House. The appropriation bill was so amended that, as enacted, it provides that none of the contracts shall be approved until after further action shall have been taken by Congress. This was satisfactory to Senator Gore.

College Races

The oarsmen of five universities took part in the races rowed last Saturday on the Hudson, near Poughkeepsie. All of the three contests were won by Cornell University, which thus made a clean sweep for the fourth time. In the first race, for four-oared crews on a two-mile course, the time was 11:37⅘. Syracuse University was close behind the winners. Columbia's crew was third, and Pennsylvania's fourth. Cornell easily won the race for freshman eights. Columbia and Syracuse finished almost exactly abreast, the official record giving the former an advantage of only two-fifths of a second. The most interesting of the three races, the one for university eights, on a course of four miles, was not begun until 7.45 p. m., and it ended almost in the dark. For a time Pennsylvania's boat was slightly in the lead, and the result was in doubt until the beginning of the last quarter of a mile. At the finish Cornell, in 20:42, led by half a length. Columbia was third and Syracuse fourth. Wisconsin University was represented in the second and third races.

Corruption in Public Office

The prosecution of dishonest county officers at Schenectady, N. Y., was continued last week. Ex-Supervisors Myron H. Jacobson and Anson H. Cady; John H. Peters, formerly clerk of the board; William J. Palmer, formerly superintendent of buildings, and P. H. Mulderick, plumber and contractor, pleaded guilty. George F. Sauter, a contractor, was convicted of grand larceny. Five of those indicted some weeks ago have confest their guilt, juries have convicted four, and four have been acquitted.——Additional indictments, due to the confessions affecting the election of Senator Lorimer, have been reported at Springfield, Ill. The men thus accused are Representative Lee O'Neil Browne, leader of the Democratic minority in the House; Representative Robert E. Wilson; Louis D. Hirsheimer, president of the State Board of Equalization; Frank J. Trant, and A. B. Johnston. It is charged that the first four were bribed to defeat the Fish Commission's bill limiting the size of the mesh in nets. Trant recently confest that he retained for his own use the money contributed by fish dealers to the "jackpot" fund for the defeat of a bill requiring them to pay license fees. ——Extensive frauds have been discovered in the Government Printing Office at Ottawa, the Canadian capital. Five subordinate officers have been dismissed. Frank S. Gouldthrite, superintendent for many years past, is missing. The Government has been robbed in the purchase of supplies, for which the Printing Office paid about $500,000 a year, and it is said that not less than $1,000,000 was thus stolen.——While Congressman James C. Cantrill, of Kentucky, was seeking a renomination at the primaries last week, John C. Noel, a banker, of Frankfort, made oath to a published statement that in 1905, when Mr. Cantrill was a member of the Legislature, he (Noel), at the request "of several gentlemen," paid to him $1,500 in bills, and that Cantrill's remarks indicated that the payment related to his change of attitude toward the selection of a site for a State charitable institution.—— Governor Hughes, of New York, has directed that inquiry be made by a special grand jury concerning the administration of Frederick Skene, who was elected State Engineer and Surveyor on the Hearst ticket in 1907.

The Revolution in Nicaragua

Altho Estrada's revolutionists in Nicaragua have recently lost ground on the Atlantic coast, they are gaining in the interior, where an army of 1,200 men captured, last week, a town near Acoyapa, and at last reports was not far from Granada, where many of the people favor the revolutionist movement. President Madriz is raising forced loans and has imprisoned hundreds of prominent citizens. When Secretary Knox's reply to his recent protest was received in Managua he forbade the newspapers to publish it. One editor showed in his journal that such an order had been given, whereupon his paper was suppressed and he was thrown into prison. Our consul posted the reply at the door of his office. Madriz sent soldiers to prevent persons from reading it. After some delay, however, the reply was given to the press. Madriz has since sent to Washington another protest against the action of our warships at Bluefields, and has also addressed a complaint to several foreign Powers. Estrada's representative at Washington has asked our Government to intercept the steamship "Columbia," which recently sailed from New Orleans with arms for Madriz.——In the Senate, on the 25th, Senator Stone, of Missouri, introduced a resolution directing the Committee on Foreign Relations to make an investigation concerning the relations between the United States and Nicaragua. He had been informed, he said, that a syndicate of bankers here had set out to exploit Nicaragua, and that the syndicate's representative at Washington was a man who formerly had been a high officer of the State Department. He also defended the Madriz Government. Senator Cullom said that the committee had received full reports and satisfactory explanations from Secretary Knox. No one connected with the Department was guilty of wrongdoing. On the following day Secretary Knox said he knew nothing about a syndicate interested in Nicaragua.——There was much disturbance last week in the northern provinces of Mexico. It is alleged that opponents of the re-election of President Diaz had planned a revolutionary uprising, and that 10,000 rifles had been smuggled across the boundary from Arizona. Many of these were captured, and several hundred persons were arrested. Troops were sent up from the south and the public buildings of Naco and other towns were guarded.——Mexico has agreed with the United States that the Chamizal claim, relating to a valuable tract of land near El Paso, Tex., shall be submitted to arbitrators. The umpire is to be a Canadian jurist not yet selected.

The Islands

The House adopted, on the 25th, a resolution reported from the Committee on Insular Affairs, providing for an investigation, by that committee, concerning the sale or leasing of lands in the Philippines. Such an investigation was demanded by Representative Martin, of Colorado, because of an official report showing that large tracts of land had been acquired at very low rates by Executive Secretary Carpenter and a nephew of Commissioner Worcester.——Troops in the Philippines are pursuing Mindanao Moros who recently murdered three Dutch traders and stole their property.——The Sugar Growers' Association of Porto Rico opposes the provision of the bill recently passed in the House limiting a corporation's holdings of land in that island to 3,000 acres, asserting that a larger area of sugar cane is required for the welfare of the sugar industry.——President Gomez has approved the plans for paving the streets of Havana. About $6,000,000 will be expended in the work, which is to be done by an American firm.——A majority of the newspapers in Havana denounce the passage by Congress of a bill authorizing a company to establish in that city a kind of Monte Carlo, where gambling games will be played and bull fights will take place.

British Politics

Owing to the period of mourning the celebration of King George's birthday was postponed from June 3 till June 22, when seven new peers were gazetted, Liberals, of course. Among them were Sir Walter Foster, a noted physician; Sir Christopher Furness, a great shipowner, and one of the wealthiest men in Great Britain, and Sir W. D. Pearson, the head of a great contracting firm. Among the

baronets is Harold Harmsworth, brother of Lord Northcliffe, of the brothers who own over seventy publications. The well known author, Mr. Quiller Couch, was made a knight. The coronation of King George will take place about the middle of May next year. The Duke of Connaught will then go to Canada as Governor-General.——The Catholic Union of Great Britain has sent a communication to the Prime Minister against the Royal declaration against Transubstantiation which the King has to repeat on his coronation. They recall Mr. Asquith's statement in Parliament that it is "one of the flimsiest and most unnecessary safeguards of the Protestant succession," inasmuch as the Protestant succession is secured not by this declaration but by the Bill of Rights and Act of Settlement, under which the King, in becoming a Catholic, thereby forfeits the crown. They complain not so much that the language of the Declaration is coarse and violent, but even more that it makes a public condemnation of doctrines sacredly believed and legally held by subjects of the King. In reply Mr. Asquith said that the subject was "engaging the anxious attention of His Majesty's Government." It is well known that the Government dislikes the terms of the Declaration and will introduce changes in it, the purpose being to omit what is offensive, except that it will retain the provision that the King will remain a Protestant, in accord with the law, but not condemning the beliefs of Catholics. ——Prime Minister Asquith has received at last with courtesy a delegation of women suffragists, and admitted that he was on their side. In the House of Commons he promised to give a chance for a second reading of D. J. Shackleton's bill for enfranchisement, but said that he could not promise further facilities for its passage at the present session. The militant suffragets are quite dissatisfied and are resolved to do their best to have the bill pressed to a final vote at this session, regarding it as of first consideration. Mr. Asquith will introduce the budget June 30. No news seems to leak out as to the result of the conferences for a settlement of the House of Lords question.——The Fisheries case at The Hague is going on steadily, two hours a day in the morning and two in the afternoon, devoted to arguments by the counsel over technical questions of the rights under old agreements. While the Fisheries case is going on Great Britain has allowed Mr. Bryce, the British Ambassador at Washington, to sign an arbitration agreement as to the old pecuniary claims that arose since 1812, excluding the Civil War claims which have already been settled.

The Educational Question

In December, 1908, after the rejection of the Education Bill by the House of Lords, the British Government under Mr. Asquith withdrew it, but ever since the education question has been a chief point of debate between the Conservative and Liberal parties, and, more definitely, between the Churchmen and the Dissenters. Meanwhile an Educational Settlement Committee of a thousand members, with an executive committee of fifty-five representative men, was formed, with Sir C. T. Dyke Acland as chairman, and T. E. Harvey, M. P., and Prof. M. E. Sadler as secretaries, with the following aims:

> "To promote and maintain religious teaching as an integral part of the national system of education, and to work on non-party lines for an educational settlement which will respect all forms of conscientious belief."

This committee kept in action after the withdrawal of the bill, and have now presented in a volume their proposal for a settlement of the question. It must be understood that in England, while the more advanced Dissenters would prefer a purely secular system of education, the public sentiment will not allow it. There were no Anglican bishops and no Catholics on the committee, and the Catholics and the High Church party object to the report, but it finds a good deal of favor and much discussion. The object of the scheme is to retain religious teaching as an integral part of national education, while permitting the largest freedom to all forms of conscientious belief. It proposes, first, to put free national schools, called council schools, within reach of every child, and then, wherever as many as the parents of 150 children desire a denominational school, it shall be supplied from public funds, the denomination providing the building and equipment. In the council

schools the children might be withdrawn for religious instruction as desired, at the expense of the denominations. There are many rural places at present where there is no public council school, but the Church school has a subvention from the State. After two years this is to cease, and a council school is to be established, by taking over, if desired, the denominational school and buildings; still, of course, providing that the children may receive religious instruction provided for by the denomination. In the denominational schools the trustees may assure themselves that the teachers are in sympathy with the teaching desired. In the normal schools, called training colleges, provision should be made for preparing teachers to give religious instruction desired. It is the religious difficulty which underlies the whole scheme, whose principles have been thus outlined:

"1. An elementary school under public management should be accessible to every child.

"2. Religious teaching should be an integral part of school life.

"3. Variety of efficient effort in national education, combined with a reasonable degree of administrative unity, should be encouraged.

"4. Administrative arrangements should be favorable to sincerity and reality in the giving of religious teaching in schools, and should show respect for various forms of conscientious belief among parents and teachers alike."

This general scheme we may be confident will be formulated later in a bill to succeed the former Runciman bill, and will probably be enacted, as it seems to find quite general approval as a fair compromise.

Annexation of Korea

The result of the discussions and rumors and diplomatic correspondence as to Korea appears in the official Japanese announcement that a colonial board will be established to administer Formosa, Liao-tung in Manchuria, South Saghalien and Korea. Accordingly, Korea is treated, it would seem, precisely like the other Japanese possessions. The Japanese Residency will be continued for the present, but it is not believed that it will be retained long. The policy toward Korea will, it is believed, be much like that of the United States in the Philippines. Korea may have a special tariff. This action, which is essentially annexation, altho as yet we have no knowledge what is to be done with the Emperor of Korea, follows in the line of action toward Korea since the assassination of Prince Ito. He was opposed to the purely military government, and on his death Viscount Inoue was sent to Korea as representing Ito's policy of peace. But he resigned on account of health, as was said, and in his place General Terauchi was made Resident-General, with Mr. Yamagata as Vice-Resident-General. General Terauchi is Minister of War in the Japanese Cabinet, and Mr. Yamagata is son-in-law and heir of Prince Yamagata, who is the stoutest advocate of militarism in the empire. As General Terauchi is Minister of War, it is natural that he can spend little time in Seoul, so Mr. Yamagata will be practically at the head of the administration. It is not unusual in Japan for a member of the Cabinet to hold two posts. Thus Marquis Katsura is Prime Minister and Minister of Finance, while Mr. Komatsubarra, Minister of Education, also holds the portfolio of Agriculture and Commerce, and Baron Goto, Minister of Communications, is likewise President of the Railway Board. This new departure has apparently expedited annexation, and the military rule of Formosa will be applied to Korea. We have received from Tokio a blue book, in English, entitled "Second Annual Report on Reforms and Progress in Korea, Compiled by the Residency-General. It embraces all sorts of reforms, described very fully, from reforms in the Imperial Household and the settlement of debts, to road and railway construction and the administration of the forestry laws; from the progress of law codification and regulations for civil and criminal procedure, to questions of currency, banking and finance; from details of central and local administration to the progress of road construction and sanitation; from the development of industry and commerce to the subject of education and the maintenance of peace and order. It gives evidence that despite insurgents and the complex relations between Japan and Korea, there has been a very gratifying advance and better feeling. Another important matter, now under consideration in Japan, has its occasion in the fact that the present treaties were negotiated before Japan emerged

as a first-class Power. Japan has notified all the European Powers that the treaties will expire a year hence and that with the United States a year later. The existing treaties are regarded as having provisions derogatory to the dignity of the empire as a sovereign Power. The other question involved is that of the perpetual leases of land in some chief cities, provided for by treaties and held by foreigners in a way that they cannot be alienated by Japan. Japan holds that these leases were extorted by fear of greater concessions being insisted on. They include more valuable business land in the cities and are held in perpetual lease by foreigners, at a nominal and unvarying ground rent, and exempt from all further taxation, either on the land or buildings erected thereon. This is resented by the Japanese as giving the foreigners a commercial advantage enormously superior to that possible of attainment by a Japanese citizen. The Japanese complains that while he has to pay a land tax, assessed according to modern values, and a house tax on all buildings erected on his land, as well as a business tax on all transactions in connection with the said property, the foreigner is exempt from all these imposts by a system of privilege that is wholly inconsistent with the sovereign right of the nation to tax all property on absolutely equal terms. These leases cover 179 acres held by the British, 81 acres by Americans, 44 by the Germans, 40 by the French and 17 by the Swiss. There are 294 acres thus held in Yokohama, 73 in Nagasaki, 42 in Kobe, and 16 in Tokio. The owners of these leases are naturally very unwilling to yield their rights, and say that if Japan wants their lands it must buy them.

A Chinese Army

China, which has hitherto been quite indifferent to military ambition, appears to be waking up to a supposed need of a strong army. General Yin Chang, who was recently appointed Minister of War, has been traveling in Europe, and, while in Moscow, he let fall some interesting and important observations on the subject. In the most emphatic manner the general stated that China's new army will be composed of Chinese exclusively. It will not be an imitation of either the German or Japanese army, but will be organized with due regard to the national psychology and the national aversion to militarism. The lessons to be derived from the growth and development of Western European armies will only be utilized as may be consistent with the Chinese national spirit. China, he declared, only lacks capable instructors. It is worthy of note that the general went on to say that the Japanese who are at present serving in the Chinese army will be promptly removed in the near future, as it is intended to recall all the Chinese officers who are at present attached to European armies, and also those who are studying abroad, to serve as instructors. The general stated that the Prince Regent and his brother, Prince Tsai Tao, who is now in Europe, fully approve of this plan, which is to be put into effect after the military establishments of France, Germany, Austria, etc., have been inspected. There will be conscription, but not universal conscription. At the outset the general intends to double the regular European drilled troops. He recognizes that ten divisions are far too few for an empire of the size of China, even in times of peace. The reform will be drastic; barracks, non-commissioned officers' schools, schools for cadets, and a general staff will be established. It is admitted that this gigantic undertaking cannot be accomplished within two or three years, but the general reckons on the growth of national feeling to assist him in the work. Yet the new army itself seems to be making some trouble. The Viceroy of Hu-Peh, also in charge of Hu-Nan since the riots at Chang-sha, has arrested four high officers of the eighth division of the new army, including the general in charge, who are accused of revolutionary propaganda.——The Chinese Government has already informally agreed to a foreign loan of $30,000,000 for the construction of the Hankau and Sze-chuen railway. Great Britain, France, Germany and the United States have, thru their representatives meeting in Paris, agreed to share it equally, and the four governments unite in presenting it to the Chinese Foreign Office for acceptance.

The True Meaning of Insurgency

BY ROBERT L. OWEN

United States Senator from Oklahoma.

INSURGENCY does not deal with individuals. It deals with principles of Government. Insurgency opposes machine rule; in the House of Representatives, for convenience, called Cannonism and in the Senate called Aldrichism. Because the Senate, in effect, is organized by machine rule, in substantially the same way as the House, a Senator of the United States newly arrived as an ambassador of one of the forty-six sovereignties has been expected to observe a deferential silence for at least two years, by which time he may be assumed to be domesticated and taught the power of the machine and its occult, spiritual influence; by that time he will have learned that his position on committees, his ability to serve the State, his power to serve the United States, depend upon the unseen forces that control the Senate in ways that an unsuspecting man does not perceive.

It is not true that the insurgent in the House wishes endless debate, or fails to appreciate fully the need of responsible, intelligent organization for the economical and efficient control of a large parliamentary body. He simply demands, within these limitations, freedom of debate, the right to be heard, the right of the body itself to act and bring up for consideration measures of public importance, without being throttled by machine mechanism putting all the power in the hands of one man, who is moved by unknown influences, who does not stand for what the people want but can always be relied on to favor and protect what the giant monopolies want. Insurgency, both in the Senate and the House, is the protest of righteousness breaking forth against machine politics controlled by commercialism. Either the insurgents in the Republican party will force its restoration to the high ideals of Abraham Lincoln, or the machine politicians and their commercial allies will sink it in a sea of popular indignation.

For insurgency is spreading beyond the confines of Congress. The people of neither party will continue much longer to submit to an alliance of machine politics and so-called "business interests" that is using the Government to plunder Republican and Democratic citizens with equal zeal. The great question of the day is—How shall the crafty hand of monopoly be restrained? How shall it be compelled to desist from running the government of the people? The great evils are perfectly obvious to every one Private monopolies fix high prices on all of the necessities of life and low prices on all raw material or crude products of unprotected labor in field, forest, mine and factory. They reduce the output on the satanic theory of over-production. They contribute millions to machine politicians. They force employees to vote for machine nominations. They secure governmental favor, legislative and executive favor, and at times, I fear, even judicial favor. They control editorial columns. They own stock in many agencies of publicity. They have perverted self-government and enabled one man to absorb a thousand millions, with an income of fifty millions per annum, while tens of millions of human beings are, therefore, exposed to hideous conditions of poverty, sickness and crime. Insurgency, not alone in the Senate and the House but thruout the country, is rebelling against this. There is one plain way out of this condition, and the people, once well awake to the real intents of insurgency, will find it, however politicians may seek to mislead them.

The corruption must be abolished by abolishing the means thru which it thrives—machine politics and its evil partnership with commercialism. We must purify the Government by purifying the ballot; by establishing the real rule of the people. Oregon has solved the problem. The United States can solve it. The vital question is, Shall the people rule? Shall they control the mechanism of party government? Shall they have the direct power to nominate, to instruct, to recall their public ser-

vants; to legislate directly, to enact laws which they want and veto laws which they do not want; to select for themselves the Senators who shall actually represent them and who shall be directly responsible to them for their shortcomings?

A distinguished statesman once said that the idea of purity in politics was an iridescent dream—later on he described himself as "a statesman out of a job." Yet he was a well-meaning man, an orator and a scholar of great ability. He simply accepted the situation and failed to grasp a great opportunity. For it is not true that purity in politics is an iridescent dream. It can be made a reality by the overthrow of the imperfect mechanism of party government which has evolved the bad system of machine rule. The remedy for the evils from which our national, State and municipal governments have suffered is to restore the rule to the people—to restore the full power of government to the people, after the Oregon system.

The people have no sinister purposes. The people will not sell themselves. The people are safe and sane. The people are conservative and sound. The people are honest and intelligent. The people would vote for public interests, not for private interests. Under the direct rule of the people, the great question of universal peace, for example, would receive unanimous approbation the wide world over, and become permanent international law. The people are less passionate, less liable to be led into complications than individuals. Under the direct rule of the people, with the right of recall, their public servants would of necessity resemble the mass more than the individual. They would be more upright, more faithful, more diligent, more economical, more honest; the public service would be purified and a new and better standard of public and private conduct would prevail. The direct public servants of the people would concern themselves to perform the will of the people, not of the interests.

The people desire many things to which they are entitled, which have been promised them and withheld—or at least not delivered—by their nominal public servants; who, under the present system, make themselves the masters of the people, instead, the moment they are established in power.

Think for a moment of the obvious and acknowledged demands of the people which have long remained unheeded, and the unkept promises which have been made to them: The people want lower prices on the necessities of life. They want the control of monopolies. They want fair prices for their crude products. They want an employer's liability act. They want publicity of campaign contributions and a thorogoing corrupt practices act. They want to stop gambling in agricultural products. Why are the reserves of national banks not used exclusively for commerce? Why is there no control of over-capitalization? Why is there no effective control of railroad passenger and freight rates which the public has been demanding for forty years? Why is there no physical valuation of railways, advised by the Supreme Court as the right method of adjustment, years ago? Why have we no national development of good roads? Why have we no systematic development of our waterways? Why did it take so long to obtain a pure food act and why is its administration, now, made almost impossible by the influences of self-promoting commercial interests? Why is equality of opportunity being so rapidly destroyed and absorbed by corporate growth? The people universally desire an income tax. They want a progressive inheritance tax on the gigantic fortunes of America; common honesty and fairness demand it; its constitutionality has been affirmed by the highest courts; it would not even offend the feelings of the most avaricious millionaire at the time of its enforcement—after he is dead. Why are we waiting so long for many other needed and universally desired benefits? To answer all by one further question—*Why do we not have the election of Senators by the direct vote of the people?*

If the people ruled, they would long since have answered their own prayers and not have denied themselves their own petitions. Of course it is possible for the machine form to be upright and honest and serve the cause of the people; but the mechanism of government by delegate plan affords too great an opportunity for alliance with commercialism

and political ambition. The great political need of the United States, today, is the overthrow of machine politics and the establishment of the direct rule of the people; the great issue is to enable the party to directly nominate its own candidates and to require its elected candidates to directly represent it.

In order to accomplish this there must be *an honest and effective registration law; an honest and effective ballot law; a direct primary law; complete initiative and referendum laws; a thorogoing corrupt practices act; the publicity pamphlet*—giving the arguments for and against every measure and candidate, to be put into the hands of every citizen for his information and guidance; and *the right of recall.*

When just this is accomplished we shall have provided a mechanism by which the people can authoritatively express themselves—and who can doubt, for a moment, for example, that the vote of the people of the United States would be for the limitation of armament and the establishment of universal peace? The people of Germany would vote in the same way. The people of Great Britian would vote in the same way. It is ambitious leaders, international mischief-makers, benefited corporations who instigate war. If it depended on the voice of the people there would be no war. If the people could directly express themselves they would vote for good roads, improved waterways, wholesale education, eight hours of labor, improved and effective protection of public health, lower prices, reasonable control of public-utility corporations, reasonable freight rates, reasonable rates by telegraph and telephone, the right of direct legislation and the right to control their public servants.

On four separate occasions the House of Representatives has passed by a two-thirds vote a resolution proposing an amendment to the Constitution providing for the election of United States Senators by direct vote of the people. On each occasion the Senate either failed or refused to act. The Speaker of the Fifty-fifth Congress declared that this was a measure even then demanded by the people, and that the House, representing the people, should pass the measure and continue to pass it till the Senate listened to the voice of the people. Thirty-seven States have exprest themselves in one way or another as in favor of electing Senators by direct vote of the people. Only nine States—New England, New York, Delaware and West Virginia—have failed to act definitely in favor of if and even in these States the tendency of public sentiment is strongly indicated in the same direction. In West Virginia they have primaries, instructing members of the Legislature as to the election of Senators. In Delaware the election to the Legislature carries with it an understanding as to the vote on the Senatorship. The Legislature in Massachusetts has just passed a resolution favorable to this constitutional amendment and is considering the initiative and referendum. Maine has recently adopted the initiative and referendum.

The right of the people to elect Senators ought not to be denied; and the party leaders who are unwilling to trust the people ought not, themselves, be trusted with the power—because the Senate can block, and actually does block, many reforms which the people desire. The Senate has frequently been used to obstruct the will of the people; yet no one can doubt that the will of the people is far more nearly right, in the main, than the will of any individual statesman honored by them with a transitory seat in the Senate. The people are more apt to be safe and sane, more apt to be sound and honest than a single individual—an ambitious statesman temporarily trusted with power.

Reaching beyond individual States, an effort was made by Senator La Follette at the last Republican National Convention to put in the platform the proposal for the election of Senators by vote of the people. It was defeated by the powerful influence of a political machine, so obviously a machine as to excite the term of derision "the steam roller." The President, in his speech accepting the nomination, pledged himself as personally in favor of the direct election of Senators by the people. I think it is no exaggeration to say that nine-tenths of the people of the United States are in favor of it. The Democratic party is fully pledged to it. The great majority of the

Republican States have favored it. The Republican President has announced himself as personally for it. A Republican House of Representatives has several times passed a resolution in its favor. The question is, Why can the people get no action from the Senate. In other words—Do the people rule, or are they ruled?

In common with all who know them I have the greatest personal respect for many of the Representatives. I would not wish to appear to say anything to the contrary. It is the machine methods we would assail and obliterate. It is the bad methods which lead to evil results, not the individuals, we would denounce. Many men, without the slightest intention of departing from lines of the strictest rectitude, nevertheless engage in the political game and use machine politics for their own preferment, recognizing no better method and thinking it to be a fact that purity in politics is an iridescent dream, content that they are, themselves, guilty of no criminal or grossly immoral act. My comments are not intended to have any application whatever to individuals, in the sense of imputing bad or depraved motives. It is the system. It is real insurgency, in its widest, truest application, in which the people of the whole country are joining with greater and greater determination, and in which they will eventually succeed. The direct rights and will of the people must be recognized. Politics can be and must be purified. The direct voice of the people ought to be and must be heard in nominations, elections and legislation, and the gross corruption of government by predatory wealth and interest must be abolished.

WASHINGTON, D. C.

A Challenge

BY MARGUERITE OGDEN BIGELOW

My lesser self is abroad today,
Tight lipped and smug, in fine array,
  In confidence of power to please,
  Well fed and sleek and quite at ease.

But my real self, that is hidden deep
From the watch that other people keep,
  Is lean and hungry and wild to burst
  From the dark, where all my strength is pursed.

And my lesser self grins covertly
At the real self in bonds to me;
  And the real self shakes the prison bars,
  Demanding the right to see the stars.

My lesser self has a thousand friends;
With a thousand lesser selves he spends
  The time. But my real self is one
  With friends but few, and known to none.

Why should my lesser self have scope
For a stronger life while I darkly grope
  In the fastnesses that I dare not break?
  While I cringe, for other people's sake,
From what? From a laugh I may never hear,
From a fight that I have no need to fear,
  From loves made proud and from friendships pure,
  From an upward path that the great make sure.

Some day, I know, ere my spirit dies,
If I dare, I shall defy the lies,
  And let my real self out to greet
  The sun or the stars, and the air most sweet.

Some day, I know, ere it is too late,
My real self must slay his mate,
  The lesser self, and with surprise
  Will meet new love in all men's eyes.

No longer to play at hide and seek,
No longer bandaged and mute and meek,
  No longer skulking and dodging sight,
  But alive and valiant, in quest of light.

My lesser self is abroad today,
But my real self will not let him stay.
  All this has my real self told to me,—
  I wonder where your real self can be?

BURLINGTON, IOWA.

THE FARMING SPECIAL.

The Remedy for the High Cost of Living

BY WILLIAM C. BROWN

President of the New York Central Railway Lines.

THE high cost of living is causing undisputed and constantly increasing distress in this country, and hundreds of editors and other philosophers have sought far and wide for the cause and the remedy, often with truly remarkable results.

But it seems to me that there is no mystery in the thing at all. The cause of trouble is plain when we look aright, and we may also perceive the certain remedy. It is: *Get more out of the land.*

We have been failing lately in agriculture and failing almost entirely thru our own fault. We have as fertile soil and favorable climate as any in the world. Yet during the past ten years our farms have produced an average yield of wheat amounting only to 14 bushels to the acre. At the same time England produced 32 bushels, Germany 28, the Netherlands 34, and France approximately 20.

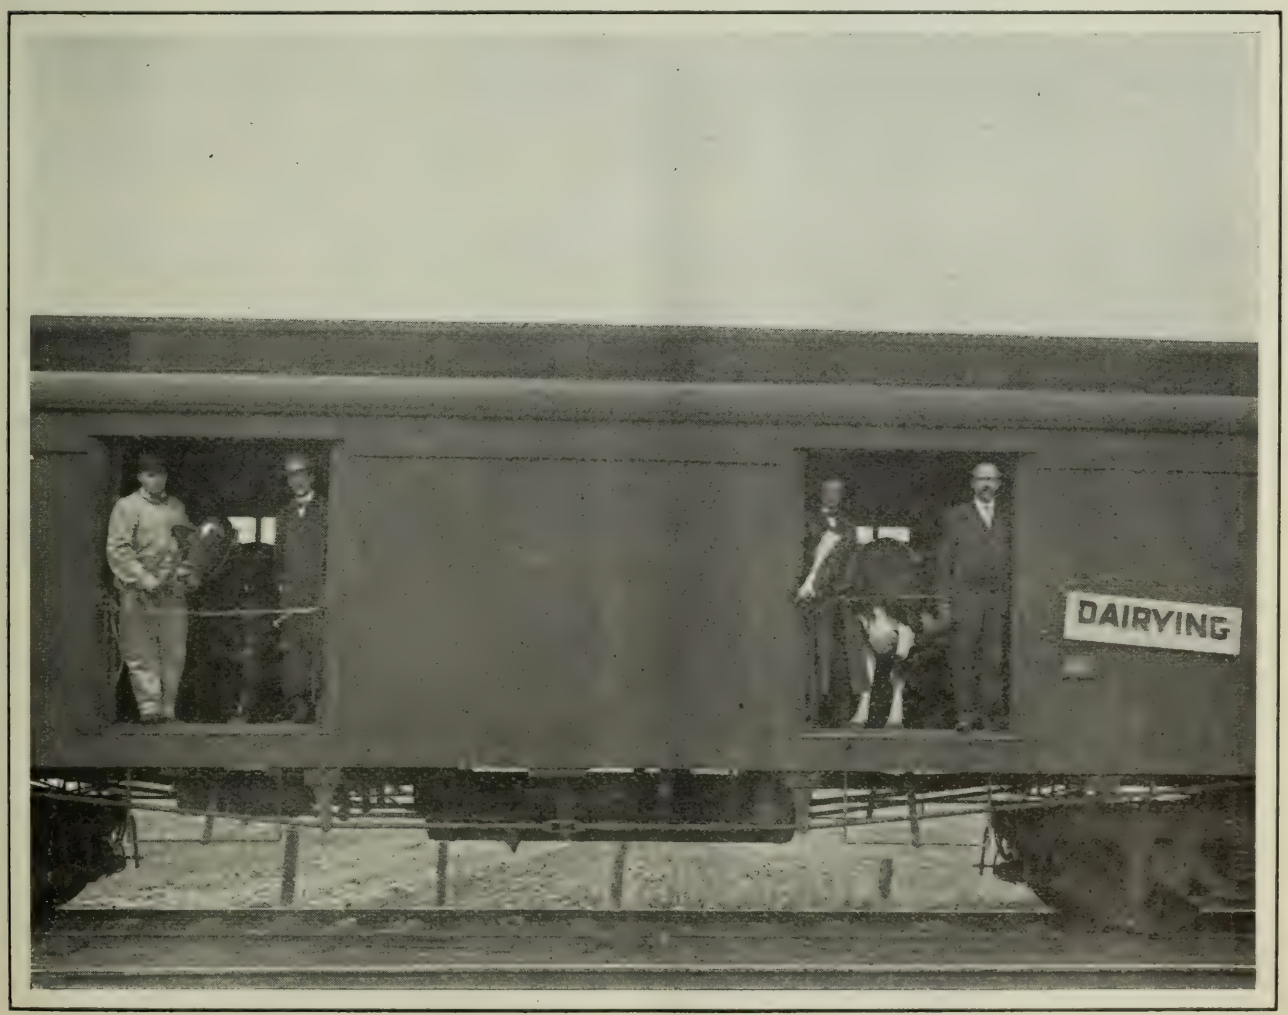
Our average per acre yield of oats was 23.7, England 42, Germany 46, and the Netherlands 53.

We have been raising 85 bushels of potatoes to the acre, while Germany, Belgium and Great Britain have produced 250 bushels. Germany, with an arable area no greater than some of our larger States, produces approximately 2,000,000,000 bushels of potatoes annually, while the aggregate crop of the United States averages barely 275,000,000, and in the year ended June 30, 1909, we imported 8,400,000 bushels.

A few years ago we were the granary of the world, and our exports of foodstuffs made a large balance of trade in our favor. But there has been a rapid and alarming decrease in these exports. Our population has been growing so fast by immigration and natural increase that it has added 2,000,000 a year to those who must be fed. Agricultural produc-

tion has not kept up with that increase. Hence cessation of foodstuff exports and greater internal demand and constantly increasing prices.

In 1898 the total acreage of corn, wheat, oats, barley and rye in the United States was a little less than 152,000,000 acres, the yield 22.5 bushels per acre, the aggregate product 3,412,000,000 bushels, of which there was exported almost 599,000,000 bushels.



In 1908 the acreage had increased to more than 190,000,000 acres, the yield was 22.8 bushels per acre, the aggregate yield 4,339,000,000 bushels, but our exports had fallen off to 165,000,000, a decrease of 72 per cent.

The tremendous falling off in exports of grain and its products suggests the possibility that the grain may have been fed to stock and exported in the shape of beef and pork, but the falling off in the exports of these commodities for the period named is fully as startling as in grain.

I have noted with regret expressions of satisfaction and self-congratulation upon the part of the press over the fact that the aggregate value of farm products has increased from $4,417,000,000 in 1898 to $8,760,000,000 in 1909, unmindful of the disturbing fact that this increase in value is the result almost entirely of increased acreage and a startling increase of price per bushel, and not the result of an increased yield per acre.

Thus we can see at a glance just why the cost of living so persistently ascends. And understanding that, we may also recognize the remedy and how to apply it. Hon. A. S. Draper, State Commissioner of Education, in an address on "Agriculture and Its Educational Needs," goes right to the point when he says:

"We should enter upon a great system of agricultural extension. The schools from highest to lowest should act in accord, not only in training students and in scientific research, but in carrying knowledge to the very doors of the farmers. Evangelistic work in agriculture should go everywhere. Seed specials

THE DAIRYING CAR.
Exhibits A and B appear in the car doors.

should be run over the railroads. The blood of the best farm animals should be distributed thruout the State. Object lessons of special interest to both men and women should be carried in all directions. The applications should be especially adapted to every section, and the fullest attention should be given to the less favored rather than to the more favored counties of the State."

New York State should be a leader in this work, first because no State in the Union needs it so badly; second, because the Empire State owes it to herself to set her sisters a good example. Ninety years ago the richness and fertility of the soil of New York State and the production of her farms was the wonder and admiration of European travelers. In 1860 New York was among the first of the great agricultural States of the Union. Today the State of Maine, lying further to the north, with its rocks and its forests, raises more per acre of all the cereals than we do, and her potato crop averages 225 bushels, as against 82 bushels per acre in New York.

In the year 1908 a friend of mine who some years ago bought 5,000 acres of land in New York State raised 200 acres of corn, which yielded 50 bushels of shelled corn per acre; his potatoes averaged 350 bushels to the acre; hay, 4 tons, and beets, 35 tons per acre. This was the result, not of intensive farming, but of simply intelligent farming, and these crops were raised in the extreme northern part of the State, 12 miles from the Canadian line, at the northern end of Lake Champlain.

The remedy for the present high cost of living is evidently in our own hands.

LECTURE ON DAIRYING.

In order to reduce the price of food we require only to make it more plentiful, and that is easy.

Cheap land lies all about us. The State Department of Agriculture has published a bulletin giving a list of farms for sale: 63,432 acres of improved farms, with fences, houses, barns, etc., at an average price of $17.7 per acre; nearly 100,000 acres at an average price of $25 per acre. There is no good reason on earth why farm land in New York State should be worth less than $100 an acre.

Newspapers have given out the im-

pression that there are many abandoned farms in the State, and many foreigners, taking the word "abandoned" literally, have come to our office seeking guidance, so that they might find one of these farms and take possession.

But there are no abandoned farms; they all have owners, but the trouble is that the owners are not working them to anything near their capacity.

What the New York Central Railway is trying to do, therefore, is to help the farmers to get more out of their land. We are endeavoring to demonstrate better methods fitted to peculiar localities, and for that reason are running two model farms, one of 60 acres at West Bergen, near Rochester, and the other of 113 acres, at Chittenango, east of Syracuse.

We do not aim to give an exhibition of fancy farming, but to show the ordinary agriculturist with the ordinary farm how to get best results with staple crops, such as corn, oats, wheat, potatoes. Also how best to drain the land.

Out West farmers frequently have too little water; here they often have too much water. Our farms were partly swamped,, and on them we are demonstrating the use of tile drains, with loose joints, placed about 2½ feet below the surface. The loose joints allow the water from the surface to seep thru into the pipes, but not to carry the soil with it.

We have secured and used seed potatoes from Vermont and Colorado, and will try various mixtures for discouraging bugs. We also aim to show how to get best results from an orchard.

Our superintendent of farms is Mr. T. E. Martin, not a college man, but a shrewd, experienced, middle-aged, practical farmer, who lives in Syracuse and from that point exercises careful supervision. In 1890 Mr. Martin had a farm on which, in the first year, he raised an average of 60 bushels of potatoes to the acre. By fertilizing, intelligent drainage and by selection of seed he had by the year 1900 increased the potato yield up to 200 bushels to the acre, and from 1901 to 1909 his average was 268 bushels to the acre. He made good with the other crops, to. Mr. Martin has long been a lecturer at State granges and is therefore well and favorably known to the agricultural world, so that other farmers will have no hesitation in following his lead.

This is the first year of the demonstration farms, and, as work upon them only began in the early part of last April, there are as yet no results to report. Later on we will report broadcast, so that every farmer may see just what we accomplished—and what he may accomplish. The produce of the demonstration farms will all be sold.

In addition to these farms we are demonstrating by means of an agricultural train. This is made up of four coaches with the seats taken out of each coach and a platform and blackboard fitted up at one end. Each coach is, therefore, a lecture room, and professors from Cornell and Canton do the lecturing. Since April last four trips have been made over New York Central and connecting lines —over the Rome, Watertown and Ogdensburg division, the Rutland, the Boston and Albany. Last trip the train went from Utica over the Black River branch to St. Lawrence County and thence over the Rutland to Lake Champlain.

The route and the stops were well advertised in advance, so at every stop the farmers gathered. Stops were from an hour to one hour and a half in length. Lectures and demonstrations were twenty minutes in length, so there were three lectures in each coach during each stop.

Each coach dealt with a different agricultural specialty, so the farmers separated according as they wanted to learn about cereals, roots, drainage, fertilizer or stock. On the last trip two cows were carried. One was a very good milk producer from Cornell College, the other a poor producer. They were used by the lecturer to demonstrate the fine points of a good cow. To the eye of the uninitiated the poor cow looked worth most money. The good milk producer was not any $500 beauty. She was of ordinary stock, illustrating what may be done by careful breeding.

These trips of the agricultural train excited great interest, and at the various meetings there were many lively and profitable debates, local farmers exchanging valuable experiences.

One of the great troubles that the

farmers experience comes from a scarcity of labor. Immigrants pour in, but they settle down in our cities and add to the present high cost of living by consuming without producing.

In view of this an informal conference was held at the New York Produce Exchange in April, at which Secretary Wilson, Commissioner of Agriculture Pearson, and representatives of the Chambers of Commerce of the large cities of the State were present. A committee was appointed to investigate the subject of available land and the labor supply, and formulate some plan for remedying the existing conditions.

This committee has since taken steps to form a company to be known as the "Agricultural Improvement Association," with the object of acquiring some of the neglected land of the State and selling it on easy terms to worthy settlers who will agree to cultivate it in accordance with the directions of experts employed by the association.

Our railroad company has no land or colonization scheme and no farms to sell, but the interest of the farmer is our interest.

Some of the aspects of city congestion are ridiculous. There are forty apartments in the building where I live and fifteen delivery wagons get in each others' way at the entrance to the area. Each wagon has a box or basket or two for some of the dwellers in the building. In the city block near by are sixteen small stores or markets selling groceries, vegetables, meats, etc. Four of them could easily do all the business of the sixteen.

LECTURE IN GRASS CAR.

Twelve of these shopkeepers, with their clerks, drivers and horses, should go on farms now, becoming producers instead of consumers. If they worked well they would soon be prosperous and happy.

Farming is good in New York State now—it was never better. The finest market in the world is here, and any man with health, strength, industry and intelligence can go on the land and soon make himself and his family independent.

NEW YORK CITY.

The Turning at Tortugas

BY ORPHA BENNETT HOBLIT

IT was a hot afternoon in June, the hottest month of the year in southern New Mexico. Altho the sun was a third of the way down toward the west, the mesa was still shimmering in its heat, the sands sending back a burning reflection of its rays to the cloudless sky. A silence lay over the great, rolling tableland, that stretched away for miles to north and south, rising gradually from the green valley of the Rio Grande to its eastern boundary, a range of high, bare, jagged mountains. These, usually rich in color and light and shadow, were today simply a great, blue-gray wall of rock. Even the winds were resting; cactus and yucca and creosote brushes stood immovable in the heat and stillness, and the covered wagon, that served as a weekly stage between Las Cruces and the mines, was apparently the only moving object on the mesa.

A light cloud of dust accompanied its progress. The four mules, their heads drooping in the heat, trotted doggedly along the smooth road, while their driver, the reins loose in his hand, his head upon his arm which lay along the back of the high seat, was half asleep.

His awakening was sudden. The road was skirting the edge of a deep, dry arroyo, whose banks were lined with the stunted vegetation of the desert, while, for a short distance along its crest a thick growth of salt cedar formed a natural hedge. As the stage came opposite this, two men burst thru it. Their purpose was evident, for their broad-brimmed hats were pulled low over their foreheads, and bandages made from the red cotton neckerchiefs worn by men of the plains masked their faces to the eyes. The taller of the two sprang to the heads of the leaders, and his hands on their bridles quickly brought them, plunging and kicking, to a halt. The other, at the side of the wagon, leveled a revolver at the astonished driver, who, struggling to an upright position, dropped the lines and reached instinctively toward the weapons in his belt. He changed his mind, however, as he looked into his assailant's eyes, and scarcely waited for the rough command to lift his hands high above his head. Then the taller man came from the mules' heads; the driver's weapons were soon in his possession, and the driver himself, blindfolded and bound hand and foot, lay powerless on the ground while the robbers rummaged thru his clothing and then searched carefully thru the contents of the wagon.

A smothered ejaculation announced the finding of a bag of notes and gold—it was pay-day at the mines. The mail-bag, too, was opened and ransacked.

"That's all," remarked the shorter man finally; "come on."

"Wait a second. Let's lift him back into the wagon. He'll roast alive out here in the sun."

"D—!" exclaimed the other impatiently, but he lent a hand, and the helpless man was hurriedly bundled into the back of the wagon. From there he heard the traces cut, the wagon tongue, freed, fall to the ground, and the mules, bearing, as he supposed, the robbers with their booty, galloping away toward the mountains, while he was left to wait with what philosophy he could muster until help should reach him from the mines or from the town.

However, it was not toward the mountains that the highwaymen took their way. The noise of the mules' hoofs drowned the sound of their cautious retreat thru the cedars and down the steep side of the arroyo. Then a rapid, tho labored, walk of a quarter of a mile along its sandy bottom brought them to a spot where two clay-colored mustang ponies were tethered. Instantly in the saddle, they urged the ponies up the opposite bank of the dry watercourse, and then away in a straight line toward the south, where Tortugas, the "Little Mountain," stands alone in the center of the great plain.

It was a hard ride, altho, as the sun sank lower, the coolness grew. The tangled growth of sage brush, the cactus and other thorny desert plants, hindered their advance, and the deep arroyos, that

cut thru from the mountains to the valley, roughened their way. It was with distinct relief that they drew rein at last in the shade of "Little Mountain," behind an outstanding spur of rock that shut them off from any view of the road at their right.

Their masks had long since been returned to their original use as neckerchiefs, and, as they swung from their saddles, two very different faces confronted each other, the only resemblance being that both wore marks of dissipation and evil living. The shorter man was well along in years; his figure was heavy almost to corpulency, and displayed strength rather than agility; the leathery skin of his face and of his short neck was seamed and scarred, and his naturally ugly features were rendered frightful by the expression of cruelty which they wore habitually, and by the cunning in his small, blood-shot, gray eyes.

The other was young, scarcely more than a boy in years, every line of his lean, muscular figure speaking of strength and activity. He, too, was browned by exposure to the sun and winds of the desert, and the indulgences of a dissipated life had left hard lines on a face otherwise handsome, tho perhaps a trifle weak in the curves about the mouth. His eyes, as yet, were frank and open, and the smile with which he met the scowling look of his companion betokened a good-natured disposition.

He now looked inquiringly at his comrade.

"The sun'll be down in a few minutes," said the other, "but the moon's full and it'll be up directly. We've just got to wait for that ef we git to El Paso before mornin' over this kind of a trail. Starlight's no go across country."

He raised a canteen of water to his parched lips, drank his fill, and passed it to the other. Then he began to open the saddle-bags in a search for food, or perhaps a flask of stronger liquor.

"Let's take off the saddles and rest the beasts a little while we wait," said the younger, and he laid a hand on a girth buckle.

"Here, you—! Let them saddles be." The other's tone was peremptory. "Nice fix we'd be in ef we wanted to git out o' this in a hurry an' had to stop an' saddle up."

His companion laughed, but let his hand fall. "It's safe enough," he said easily. "No one uses this road except young folks from the college or from Cruces on mountain picnics. If there were any today they're safe in the mountains now and will wait for the moon, too, before they start home. I was a student myself, you know, and I am on to their tricks. If the sheriff's got word he'll look for us in the hills."

As he spoke a faint sound came to their ears, a low, wailing, sobbing cry, as of a weary child in pain.

Instantly their hands gathered up the reins and each had a foot in the stirrup. Then the younger laughed derisively.

"Just a coyote, Jim," he said.

His companion listened attentively, as the cry came again. "I never heard a coyote howl like that. It ain't time for them to begin, either. I'm fer gittin' out o' here."

"Well," persisted the other, "it ain't any one after us. They wouldn't announce themselves in that fashion. Maybe it's a wild cat. I'm going to have a look."

"You'd better mind your own business." Nevertheless, as again the cry reached them, and his comrade, revolver in hand, crept cautiously thru the brush round the jutting rock toward the trail, he, too, hastily tethered the horses, drew his own weapon, and followed.

A call hurried his footsteps. He came out on the rough road to see his companion bending over something that appeared like a bundle of clothes on the ground.

A nearer view showed it to be a woman lying face upward on the coarse gravel, a sleeping babe still within the loosened curve of her right arm, while close to her, on the other side, sat a child of about five years of age. Evidently it had been the cries of the latter which the men had heard, but now, except for a spasmodic, sighing sob that now and again shook her weary, little body, she was silent, sitting bolt upright and round-eyed, watching the young man, who was examining the condition of the woman.

"What's up, Mack? What ails her?

Who is she? Come along out o' here, you —— fool. We can't afford——"

The younger man rose to his feet, his face pale and awed.

"She's dead, Jim. Snake bite, I guess. How did she ever get away out here with these children?"

"Jim" came nearer. "Let me look. I know most of the Mexicans about here. Yes," he continued, "look at that ankle. It's a rattler's bite, all right, and it's Lolita, old Ana's girl. You know old Ana, —lives in that adobe next the bridge in Cruces." Even his hardened face took on a softer look as he went on. "Lola was a pretty girl once, but she's had a devil of a life sence she married that beast of a goat-herder out there in the mountains. He's always drunk, beats her reg'lar an' turns her out o' doors sometimes. Then she has to pick up her kids an' foot it in, fifteen miles, to her mother's till he sobers up a little an' comes after her. That's what's happened this time, I guess—— Well," impatiently, "come on. She's dead, an' we can't do anything. We've got to be lookin' out fer our own hides," and he turned toward the place where they had left the horses. ,

The young man seized his arm. "But the kids! What'll become of them?"

"Jim" swore savagely as he pulled away, then laughed into the troubled face of the other.

"Blamed ef I *care*. A couple of dirty Mexican brats! The coyotes will find *them*, too, before mornin'."

He moved off thru the bushes, and, after a moment, his comrade followed him. As they disappeared from view behind the rock the child again set up its low, wailing cry.

"I can't stand that!" Again the young man grasped the elder's arm. "Say, Jim——" he hesitated, "let's take 'em along."

Even profanity failed the elder for a moment in his indignation at the suggestion. He turned purple and choked with rage.

"You ——, you *fool!*" he ejaculated at last. "Come along. We won't wait fer the moon."

He moved away to untie his horse, but when he turned again it was to find himself looking into the muzzle of Mack's revolver, and his face grew livid.

"You needn't be afraid," said Mack coolly. "I'll not hurt you if you act right, but I thought I'd better take all necessary precautions before breaking it to you. I'm not going to leave those youngsters out here to the rattlers and coyotes. I think we *could* take them along. It might be helpful. A sort of a disguise, you know." He smiled at the thought. "No sheriff would expect to find us carrying babies. But since you object to that, I don't mind telling you that I'm going to take them to Cruces to their grandmother."

All the weak, irresolute lines in his face had vanished in the light of his determination. His eye was clear and his hand steady.

"And I'm not going to be interfered with," he went on. "Put your guns down on that rock and move off a few paces."

Jim obeyed sullenly and Mack quietly took possession of the weapons.

"Now get on your horse and start."

"See here, Mack." Jim's tone was both respectful and relieved as he saw the other lower his revolver. "You can't do that. We've both been wanted in Cruces fer weeks. Lucero's men are out after us an' they'll nab you before you're half thru the Indian quarter."

"Well, that's my risk."

"But——" Jim stopped, felt for his missing revolver and then looked apprehensively at the other. "You won't—peach? You won't put 'em on my trail?"

"No, I won't." Mack smiled indulgently. "Be off, you old scoundrel. You ought to be contented enough. You've got all the swag and a clear road before you. Get along. Let me see you over the top of that hill before dark."

Jim, muttering curses, swung himself into his saddle and rode away rapidly, never once looking back at the figure that stood watching him for a few moments. Then, satisfied that his companion had no intention of returning, the younger man, leading his horse, went back to the place where he had left the dead woman and the two children.

As he appeared the wailing stopped again, and again the round eyes were fixed on his face.

"See here, kid," he said, as he stooped over her—his voice was awed and gentle—"did you *walk, all* the way here?"

No answer. He repeated his question in Spanish, but the child was still silent. He tried another subject.

"Hungry, kid? Thirsty? *Tienes hambre? Sed?*"

Two tears rolled down the stolid little brown face, and he hastened to present his canteen to the child's lips, who drank eagerly.

"I'll give you some more in a little bit," he said, as he took it from her. "Wish I had some grub, too, but that's all in Jim's saddlebags." He took a flask out of his pocket, smiled whimsically and returned it. "I guess not. Not exactly the right stuff for kids of your size—or mine either. Well, I must get started."

Very cautiously he removed the sleeping infant from its mother's side, and then with it in his arms, stood hesitating, looking down into the face of the dead woman, ghastly in the last rays of the setting sun.

"I oughtn't to leave her like this."

He laid the babe down, removed the woman's black, woolen mantilla, and placed both children upon it at some distance from the mother's body. Then, with his knife he cut branches from the bushes near by and placed them around and over the corpse, and, exerting all his young strength, rolled stones and boulders about the heap, rudely walling it in and roofing it over.

"It'll take coyotes awhile to dig thru that," he observed with great satisfaction, when the work was finally completed.

It was quite dark now except for the starlight, and the babe was awake and feebly moaning. To it, as well as to the other, he administered more water from his canteen, and, wrapping them both in the worn black shawl, and holding them firmly in one arm, he rode slowly down the trail toward Las Cruces.

Soon the full moon appeared over the mountains behind, for a few minutes casting their long, dark shadows far over the mesa, then, as it rose higher, dimming the starlight and flooding the whole earth with a clear, cold light. The trail stretched white before him. The children slept again. As the horse ambled gently along and the lights of the little city in the valley grew gradually nearer, a look of seriousness, that deepened into solemnity, came into the young man's face. He looked abroad to right and left over the moonlight-flooded mesa, lying vast and awful in its loneliness, then down over the silent valley and up into the depths of the sky above him; he drank in eagerly the crisp coolness of the summer night, and his face grew wistful, then stern.

"It's the Pen, all right," he said, half aloud. "No more of this for me. But I can't blame any one. It's my fault. I might be skylarking around the campus yet with the rest of the boys if I hadn't been a blamed idiot."

"I might make a fight for it, and follow Jim. Guess not. Guess I'd rather be right here—Pen and all. I'm rather tired of Jim. Besides," he looked down at the sleeping children, "the kids might get hurt."

"All right, boys," he said coolly, half an hour later, as he handed over his pistols to two swarthy gentlemen on horseback, who galloped after him as he crossed Main Street in Las Cruces, and, with leveled weapons, demanded his surrender. "Just let me stop at Ana's, at the bridge, a minute, and deliver these youngsters, tho, won't you? They need something to eat."

The pitiful story was soon told, and the children safe with their weeping grandmother, Mack Bryant turned with his captors toward the jail, and, with a heart singularly free from regret, bade farewell for many years to liberty.

Agricultural College, New Mexico.

New Light on Ancient Civilizations

BY MORRIS JASTROW, JR.

Professor of Semitic Languages, University of Pennsylvania.

HAPPY the scholar who enjoys the privilege of bringing his life's work to a happy fruition! Such a man is Dr. William Hayes Ward, who has just issued a monumental work on "The Seal Cylinders of Western Asia" that will be indispensable to all students of Oriental archeology, in the broadest sense of the term; and the Carnegie Institution is to be congratulated in standing sponsor to so valuable a contribution to science.*

a *b* *c* *d*

SEAL CYLINDERS.

a, Early Babylonian; *b*, middle Babylonian; *c*, late Babylonian; *d*, Persia.

The striking feature of the work is its comprehensiveness. There is scarcely any phase of the many-sided subject that is not exhaustively treated by Dr. Ward —the purpose of these seal cylinders, their material, bibliography, classification, age, and subdivision, and above all the detailed study of the designs. The period covered by these curious objects serving primarily as an attest to proprietary rights and as the sign manual of individuals extends from the earliest period of Babylonian history, about 3000 B. C., down thru the Persian period to the threshold of the Christian era. The study of these cylinders thus forms an important chapter in the history of art. More significant still is the value of the designs on the cylinders in supplementing our knowledge of the gods and myths of Babylonia and Assyria as derived from the monuments and from the material in the historical and votive inscriptions and in the religious literature, while much light of an entirely new character is shed upon the relationship of Hittite conceptions of the gods to the religion of Babylonia and Assyria.

Some idea of the labor involved in this elaborate study of the subject may be gathered from the mere mention of the fact that Dr. Ward's volume contains over 1,500 drawings, made in almost all cases direct from the cylinders or from casts. The drawings are most carefully done tho quite frequently Dr. Ward, with his practised eye, sees more than the draughtsman; and the inscriptions are at times rather roughly done. This wealth of material has been arranged under a large series of subjects and in thus placing before his readers all important variations and modifications of one and the same subject, an opportunity is afforded of studying the types and methods of representation of the gods and heroes for the various periods embraced in the volume. Dr. Ward adopts a geographical and national classification of the cylinders into six classes, Egyptian, Chaldean, Assyrian, Syro-Hittite, Persian and

Cypriote. A criticism might be offered in regard to the word Chaldean which is subject to misunderstanding, since it is hardly the appropriate term for the older historical period of the Euphrates Valley, but, on the other hand, Babylonian, tho preferable, would also be open to objection. Dr. Ward himself recognizes that outside of these six classes, there are some cylinders that show other influences. A chronological classification would be more satisfactory, were it possible, but even Dr. Ward, who has studied the subject more thoroly than any one living, does not venture to do more than draw some very general distinctions between archaic and more modern types. To be sure the archaic cylinders are very marked, the peculiar bird-like shapes of the heads of the deities and heroes and the rudeness of the designs dividing them off from all others, but after we pass the archaic period it is next to impossible to pick out characteristic points of differentiation. In a general way we can separate the older cylinders from the later ones and frequently inscriptions on them come to our aid. There is every prospect that the further enlargement of our material will result in considerable progress along this line. We may, also, fairly expect that with more material and with more detailed study of some of the groups recognized by Dr. Ward, and the meaning of many details—such as the many accessories to the chief design—which now escape us will become clearer.

It might be proper to mention here also one further source for the study of seal cylinders which Dr. Ward has only been able to use to a very limited extent and that is the impression of such cylinders in the numerous clay tablets of a business character. Professor Clay, in his two volumes of Cassite texts from the Temple archives of Nippur, has shown how this material is to be made accessible, and we echo the hope exprest by Dr. Ward that some scholar will undertake the grateful task of collecting, by means of casts and drawings, the impressions of the seal cylinders on the tablets in the various museums. In this way we may hope, as Professor Lyon took occasion to point out some years ago, to be able to get an approximate dating

ASSYRIAN CYLINDER.
Bel and the Dragon. About 700 B. C.

of many of the designs to be found on the cylinders. Why should not the Carnegie Institution follow up Dr. Ward's work by engaging some good draughtsman to visit the half dozen large museums of Europe and this country for this purpose and then to publish the material in conjunction with Dr. Ward? Meanwhile, we have in the shapes of the cylinders—from those with a concave surface to the more perfectly cylindrical ones and then thru various phases into barrel-shaped cylinders and finally into cones of various shapes until by a steady flattening we reach the shape of the old-fashioned seal rings—a valuable index for a chronological order tho far from sufficient for finer distinctions of periods. Dr. Ward furnishes illustrations of over twenty characteristic shapes of seal cylinders actually occurring.

It is curious that of royal cylinders, i. e., those bearing the name of some ruler, the two or three dozen at our disposal belong almost exclusively to the oldest period. Sargon I, Naram-Sin, his

son, Gudea, Dungi of the Ur Dynasty and two rulers of the Kassite period are represented in Dr. Ward's book to which now a number of rulers from the first dynasty can be added (see L. Delaporte, *Revue Archeologique, 4eme* Series, Vol. 15), and then there is a large leap to Darius, King of Persia, tho the specimen is notable for having the royal name "I am Darius the great king" inscribed in Assyrian and in Persian cuneiform script.

It is quite impossible within a space of a review to give more than an imperfect survey of the many subjects represented on the cylinders. For this the work itself must be consulted and a perusal of the seventy chapters of the work will be of intense interest to the general reader as well as to the student interested in art, archeology, mythology and the history of religion.

Of the gods, the chapters on Shamash —the sun-god—Marduk, Ishtar, Adad and Bau may be singled out as containing a wealth of valuable suggestions. The antiquity of the representations of Shamash is incidentally revealed in the weapon which he holds in his hand and which, according to Dr. Ward's ingenious and convincing explanation, portrays a wooden weapon the edge of which is set with flint—a relic, therefore, of the stone age. The variations in treating the same theme are most interesting. So in the design portraying the rising sun, Shamash is sometimes seen emerging from the gates of morning and stepping up a mountain, sometimes his hands rest on the two mountain tops, lifting himself up by main force, at times again only one hand rests on the mountain. The motif of symmetry suggests that frequently two gates are portrayed instead of one and two mountain peaks instead of one. In the same way, in place of one gate-keeper who opens the way for the passage of the god, two such keepers are portrayed. These features of the scene then pass thru a process of conventionality, which leads to further variations. The mountain becomes a mere foot-stool on which one foot of the god appears resting. The gate disappears or the gate-keeper, and sometimes both, and instead we have a worshiper before the god followed by the consort of Shamash who is recognized by her uplifted hands—as tho interceding with the god on behalf of the worshiper, or the goddess is portrayed as leading the worshiper, bringing an animal as a tribute to the god.

ASSYRIAN CYLINDER.
Fight of Bel and the Dragon. About 900 B. C.

In illustration of his interpretation of the scene with its numerous variations of Shamash ascending the mountain after passing thru the gate of morning, Dr. Ward quotes passages from Babylonian and Assyrian hymns in which the sunrise is actually described in this way, and from strikingly parallel passages in descriptions of the sun in the Old Testament, it is evident that similar views were once held by the Hebrews, who, as was natural, transferred the imagery in the later Psalms of Yahweh.

By means of these cylinders we are enabled to differentiate between deities that were afterward combined into a single figure in the Babylonian-Assyrian pantheon. An illustration is to be found in Dr. Ward's treatment of cylinders de-

picting a deity leading a bull. The position of the god varies. His foot sometimes rests on the bull's neck or head, at times he stands on the hump of the bull and again his two feet span the body of the bull. In almost all cases, however, the god brandishes a thunderbolt of varying shape until in some instances it becomes a trident. This god is evidently a storm-god but in other seals another figure appears, wearing a short garment and with a weapon in one hand. Instead of the horned cap he usually wears a turban and so in almost every way he can be distinguished from the other god; and yet this god is designated in inscriptions accompanying the seal cylinders as the storm-god. This proves that there were two distinct storm-gods worshiped in Babylonia and Assyria and we can thus, on the basis of representations on seal cylinders, differentiate be-

HITTITE CYLINDER.
The three chief Hittite deities. Perhaps 1000 B. C.

tween Ramman and Adad—two storm gods blending into one another and becoming almost interchangeable. One of these storm-gods represents an importation into Assyria and the Euphrates Valley as is sufficiently indicated by his designation as "the god of the Western land." Ramman, "the thunderer," appears to have been the intruder, tho it is curious that the other storm god, Adad, is not represented on cylinders until the time of Gudla, and, as Dr. Ward informs us, is not even frequent in the period following Hammurabi. On the other hand, Adad appears frequently with Shamash on these cylinders, and this corresponds to the constant association of these two deities in divination texts. They are called, in fact, the "lords of divination." Now the bull is also a symbol of Enlil—the chief god of Nippur—and who is likewise a storm deity, and the question arises whether Adad may not be a double of the old deity Enlil, who was at one time the head of the pantheon and who retained a theoretical headship till a late period.

These few examples will suffice as illustrations of the value of Dr. Ward's work in illuminating important problems of Babylonian-Assyrian religion. There is scarcely a page which is not full of suggestions, and one may safely predict that this volume will prove to be a source of rich inspiration to many scholars.

The myths and legends of Babylonia and Assyria also find abundant illustration in this precious volume, and the chapters on Gilgamesh and Eabani—the two chief figures in the national epic of Babylonia—and on the Etana story may be mentioned as especially valuable. The wealth of illustrations in the two chapters on Gilgamesh and Eabani is almost bewildering; but such is Dr. Ward's mastery of his subject that the different types and classes depicting scenes from the epic become lucid as we follow his unfolding of the theme. The subject invariably chosen in the case of both heroes is a contest with animals—bulls, lions, bisons, ibexes, and dragons. As types of warriors the two became the favorite subjects of artists who roamed far afield in their desire to produce variations of a theme that had evidently become popular at an early period and continued its hold upon the popular fancy to the latest times. By dint of prolonged study Dr. Ward has succeeded in determining the distinguishing marks of the age of these cylinders, and a careful study of the chapters in question reveals him as a reliable guide. Moreover, his modesty prompts him to differentiate between certain and uncertain data, and it is one of the many merits of the volume before us that the author anticipates the reader in placing the interrogation marks at the proper places.

In the case of the Etana myth, Dr. Ward's study of the subject from the cylinders confirms the conclusion to be drawn from the fragments of the story known to us that the episode of Etana's flight on the beak of an eagle is distinct from the story of the enmity between

eagle and serpent. In the same way various points in another well-known Babylonian tale of a conflict between Ereshkigal or Allatu, the goddess of the nether world, and Nergal, who became her consort, receives a striking illumination from Dr. Ward's ingenious discussions of a certain group of cylinders.

The bearings of the cylinders on the question of the mutual influence upon each other of Hittites and Babylonians should at least be mentioned here. Dr. Ward has made it certain that the nude or semi-nude goddess—invariably a form of Ashtarte or Ishtar—is a characteristic figure of the Syro-Hittite art. When therefore we encounter a nude goddess on Babylonian cylinders who is the consort of Marduk, it becomes exceedingly probable that we have here a direct influence of Hittite conceptions. Whether our author is also right in suggesting that winged figures in Assyrian art represent likewise a foreign importation may be questioned, for the reason that the idea of hybrid beings—mixed of man, four-footed animals and birds—seems to be native to Babylonian-Assyrian mythology and would naturally find an expression of the conception in the art. Attention should also be called to the valuable chapters (67 and 68) in which as a kind of summary, Dr. Ward passes in review the various types of gods and goddesses on the cylinders with the distinguishing marks. These chapters are followed by an equally valuable one on the emblems of the deities which is a skillful and complete survey of the field. In the case of quite a number of these emblems, however, the question of identification with a deity must be left open.

In the last chapter Dr. Ward restates a conclusion set forth by him some years ago that his study of the cylinders—more particularly of some of the earlier types—leads him to seek in Elam the origin of Babylonian civilization. We venture to think that he has merely succeeded in showing that one of the elements in this civilization is to be sought in the mountain regions to the east of the Euphrates Valley. All great cultures are due to the commingling of various elements. The Babylonian-Assyrian culture results from the mixture of aboriginal Semites with Sumerians, and with admixtures at various periods of Amorites and Hittites, Kassites, and no doubt other groups. The Sumerians, coming evidently from the east and northeast, did not originate the culture of the Euphrates Valley, but added that stimulus which was fraught with the most important results. Naturally in a period lying for the present beyond the ken of history much is still doubtful and much may remain doubtful, but Dr. Ward has clearly demonstrated that the early art as represented on the cylinders furnishes the evidence that the people who added the leaven to the mass came from the direction of Elam.

If there is any criticism to be passed on the work it is that more attention should have been paid to the inscriptions that are frequently found on the cylinders. Many of these inscriptions have been translated by Professor Price of the University of Chicago, but quite as many have been left untranslated, and this is to be regretted. The reading of these brief inscriptions is fraught with special difficulties, and tho there are quite a number of corrections to be made, Professor Price has done his work well. There should have been added, however, in all cases a transliteration of the inscriptions as well as a translation and also discussions of the signs used. To be sure, this is a work by itself, but it would still further enhance the value of the volume if this had been done in an appendix.

PHILADELPHIA, PA.

Briand, the Autocrat of France

BY ANDRÉ TRIDON

A "PRÉSIDENT DU CONSEIL," the French for Prime Minister, is truly an important personage in the Republic; he is an autocrat, pure and simple, against whose word no power can prevail . . . until a vote of the Chamber hurls him back into obscurity. Nothing short of this can check his activity.

For the President of the Republic is a mere figurehead who is not expected to express any personal opinion on political matters either in private or in public, who couldn't exert any pressure in any direction without exposing himself to contemptuous abuse, and whose only well-defined prerogative is the privilege of commuting capital sentences into life imprisonment.

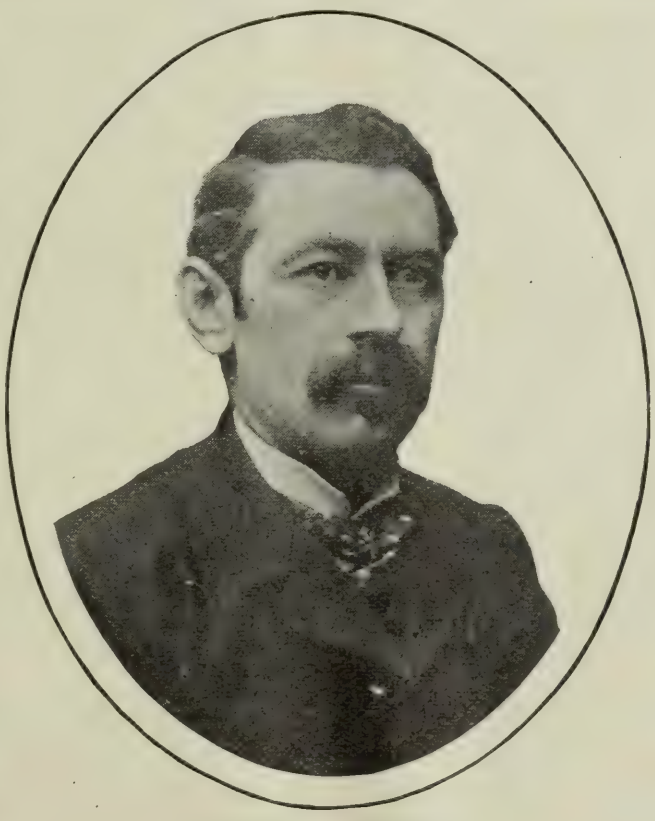
The publicity given to all Parliamentary doings, which sometimes occupy the place of honor on the front page of newspapers, precludes the existence of a French equivalent for the type of Speaker the United States have evolved. The looseness of party lines does not permit of much power being wielded by any Senatorial individual or group, and finally, the President of the Senate and of the Chamber are just—presiding officers.

On the other hand, let us recall the procedure by which the President of the Council is invested with his lofty office.

After a Parliamentary crisis, that is, a vote disapproving of the present Cabinet's policy, the President of the Republic calls into consultation the Parliamentary leaders, particularly those directly responsible for the Cabinet's defeat. He ascertains what individual might be acceptable to them; it is not a question as to what party will henceforth rule, but as to the policy on which the majority of the parties are willing to compromise and work together. The *persona grata* is thereupon invited to select heads of departments as acceptable to the majority as he is himself. The Ministers assemble and draft a manifesto which is read off to Parliament by the Prime Minister; a vote is taken to determine whether a workable majority will pledge itself to support the policy of the new Cabinet; and then the Président du Conseil becomes the master of the situation.

We must say, however, that a majority in Parliament six months or a year before the general elections does not confer upon the Prime Minister the autocratic powers which a majority insures him immediately after the nation goes to the polls.

This is why when on July 23 of last year President Fallières signed the decree which entrusted to a Socialist the management of the French Republic, the well-informed abstained from passionate comment, and the financial market remained indifferent. For the general elections were only ten months distant and considering the various Parliamentary recesses, very little time was left to the new incumbent to the Premiership in which to attempt epoch-making experiments in practical politics.



The majority Briand could rely upon in Parliament was merely the Clemenceau "bloc," and the bloc would support any Radical, Radical-Socialist, or Socialist in so far as he would liquidate properly Clemenceau's succession. Further than that the possible stand the Chamber and the nation at large might take was a matter of speculation.

Today, however, the situation is perfectly clear. The result of the general elections has shown that the country approved of the support given Briand by its representatives; better yet it is a slightly increased majority which has backed up Briand since the newly elected legislative body has convened.

This means that, barring internal troubles and barring also such unexpected incidents as have been known, however trivial they were, to hurl from the Tarpeian Rock well intrenched ministries, nothing will prevent Briand from carrying out his Socialistic plans.

The confidence shown by the Republic in a man of his type and the way in which he won that confidence are well calculated to surprise those who indulge in easy generalizations on the "French temperament."

When a French daily some years ago took up a coupon vote to determine who was actually the most popular Frenchman, alive or dead, a majority running up to seven figures designated a simple, unassuming, unspectacular individual, a chemist—Pasteur. A few thousand slips bore the name of a dethroned idol, Napoleon, who was relegated to the seventh rank. The same France which voted for Pasteur is back of Briand, one of the most unromantic figures of modern times. For Briand is a man of unimpressive presence, an indifferent speaker or rather a speaker indifferent to oratorical effects, and absolutely scornful of the emotional appeal. He does not wish to sway a crowd; he argues with individuals and convinces them. Leaders of parties attack him, but individual parliamentarians agree with him. Party discipline was never very vigorous in the French Parliament, but Briand's ministry seems to have dealt it a death blow.

ARISTIDE BRIAND.

A partisan of industrial peace at any price while solutions of the labor problems are being sought for, he was openly antagonized by Jaurès, Guesde and Hervé; as an advocate of the income tax and of the old age pensions he was bitterly censured by the bourgeois Center; as the author of the Separation law, he had nothing to expect from the right wing of the Chamber. And yet his position has grown stronger from day to day. France is evidently tired of politicians and skeptical about pre-election promises. Briand speaks little, works hard, doesn't emerge often from the obscurity of his austere private life, and never promises anything, never "pledges his honor or his life" to do a certain thing. The expression, "We will endeavor to do this," recurs very often in his speeches; and the public believes he will do his best.

What will he endeavor to do in the course of the coming legislature? Some of his critics go on repeating that thus far he has not done anything. This is slightly exaggerated. He had to make good the promises of his predecessor; and the income tax bill, the old age pension bill and the Western Railway purchase bill were enough in themselves to keep Parliament and the Cabinet very busy. Those bills, however, had been fathered by other ministries. With the general elections looming ahead of him Briand could hardly do anything else. He had acceded to the Premiership a little suddenly and he didn't know whether he was strong enough to put thru any of his projects before May. Should he have started

any movement before the elections, the following legislature might have stopped it short; should he have engaged certain expenses and failed to meet with the approval of the nation at the polls, the party with which he was associated, the ideas he represented would have suffered incalculable harm. He knew that it is dangerous to force a nation's hand; the Radicals have established a record for prosperity which he did not care to set at naught for the sake of a hasty experiment. In the past ten years under the leadership of Radicals, Radical Socialists and Socialists, France has seen her foreign commerce, on which rests her manufacturing activity, increase 44 per cent. Briand wanted to avoid a financial crisis and therefore waited patiently. "Reforms," he said many times, "are of no avail unless they are carried out in a country prosperous and at peace."

The first reform Briand will submit to the consideration of the Chamber is a reorganization of that body; the length of a Parliamentary term and the election methods are to be modified. Briand considers that the nervous tension which precedes the general elections every four years is an undesirable pathological condition. He proposes therefore to hold elections oftener and to elect fewer Deputies at a time. Representatives should be elected for nine years and the Chamber renewed by one-third at triennial elections. In other words the voters would in 1914 elect one-third of the Deputies for three, one-third for six, and the rest for nine years. Elections then would be held in 1917, 1920 and so on. Thus the public would be spared the hysterical agitation of a nation-wide campaign every fourth year.

The proportional representation bill will modify more deeply the present electoral system. At present if there are, say, 50,000 voters in one department electing five Deputies, the voters being almost equally divided between two parties, all one party needs in order to capture the five seats in Parliament is to poll 25,001 votes. The 24,999 who voted the other ticket are thus left without representation. With the proportional representation if one ticket polls 30,000 votes that ticket will send three men to Parliament. If the other ticket polls 20,000 votes it will be represented by two men. This will be a recognition of the rights of minorities, and altho the idea is unpartisan and democratic this measure will insure the Radical elements a larger representation at least for a certain number of years. At any rate it will establish a more complete sympathy between the electorate and the legislative body.

A third innovation Briand proposes to introduce into the Parliamentary life of his country is the creation of departmental or regional assemblies. What the scope and aim of those assemblies shall be has not yet been made very clear, but we gather from one of Briand's addresses the idea that their value would consist in accustoming citizens to the discussion of national and local affairs. They would be, to use his own words, "training schools for Deputies and Senators."

Notwithstanding the interest which attaches to the Parliamentary reform, Briand's attitude toward labor legislation will be the burning question. Let us say immediately that Briand draws a sharp line between Government employees and other classes of laborers or salaried people. As a Government position in France means a life tenure or retirement on a pension after thirty or thirty-five years' service, a strike of Government employees is to a certain extent, in his estimation, a breach of contract. He will therefore have to find some redress for the abuses that honeycomb the civil service, and among which favoritism is apparently the most deeply rooted.

Neither the bill relative to the status of Government employees nor the arbitration bill framed after the New Zealand system will be the most important details of this year's work; but the world will watch with interest two experiments which may revolutionize the relations between capital and labor in France.

In one of his speeches Briand said that the syndicates must not confine themselves to serving as labor exchanges, but should become by and by "centers of direct production." How this will come to pass is not explained, but a hint is given us in another paragraph of the same speech relative to profit sharing. Briand boldly advocates the creation of "work stock" held by workingmen and paralleling the capital stock held by employers and insuring to the workers a

participation in the benefits of the enterprise with which they are connected.

Is this the proposed solution of the problem? Is this the means by which, to use Roosevelt's and the Socialists' phraseology, "users of tools will become owners of tools?"

This may prove a very hard nut for Briand to crack, as it is a direct blow at the principle of private property. Capitalists were easily reconciled to the idea of an old age pension in a country where 60 per cent of all occupations carry with them a retirement pension; they could not oppose effectually an income tax which hardly touches the thousands of little capitalists characteristic of France. On the one hand, profit sharing made compulsory entails a direct and unpleasant interference of the Government in every business man's affairs.

Extremists who could not understand why Briand didn't bring about the Socialistic millennium the very day he assumed the Premiership may cease to call him a traitor, for the project bears visibly the Socialistic hallmark and amounts to a recognition of labor's claim to a larger and larger share of labor's product.

We have as yet no information concerning the holding or transferring of those labor shares of stock but any one can see easily the logical outcome of such a measure.

The minutes of the debates in the French Parliament for the coming year will make fascinating reading for practical economists.

NEW YORK CITY.

The Parlous Thing

BY WILLIAM R. BENÉT

THE villainous tract he knew.
  Boulders were its wear.
Black and steely blue
  Its girth in the low moon glare.
Between his gantlet palms
  He raised his good sword drawn:
"Now of this night who asks an alms?
    Say on, Sword, say on!
    Say on, Sword, say on!"

"First a Beauty bright,
  Second the Fiend in red,
Third with Your Own this night you fight—
  And that is all," it said.
  Then was he sore adread.

Cratered and cracked that ground.
  Floundered his steed again.
False Beauty, without sound,
  Stood—as She dawns on men;
Her naked body drest
  In the colored mists of dawn. . . .
As the steel he drew from her cloven breast:
    "Say on, Sword, say on!
    Say on, Sword, say on!"

"A hard thing this to meet.
  I pledge you well begun!
The Fiend should treat at your mailèd feet;
  But—comes the Parlous One."
  Cold did his marrow run.

His charger's crest came back,
  Tossed, and went down sidewise.
The Fiend in red and black
  Flamed right before his eyes;
Swift as a snake! at grips
  Like a tiger set upon! . . .
He wiped Fiend's blood from his Sword's blue lips:
    "Say on, Sword, say on!
    Say on, Sword, say on!"

"Trenchant! . . . But feel your side
  Twined by the Parlous Thing:
More than Derision to deride,
  Faster than flesh to cling!"
  Hissing his brains did sing.

The Thing came flowingly.
  It damped his side all warm:
"Two you have slain for fear of Me—
  And I take o'er the charm;
For I am the fever in your brain,
  The weakness in your arm—
Your Self of inmost treachery, lechery and alarm!"

. . . . . .

Such were ill plight to know
  Between the dark and dawn!
Struck that good knight his final blow?
  Shrunk he to sob and fawn?
It was the hour of overthrow.
    Say on, Sword, say on!
    Say on, Sword, say on! . . .

BENICIA, CAL.

Woman Suffrage in Great Britain

BY IDA HUSTED HARPER

Chairman National Woman Suffrage Press Committee.

THE movement for woman suffrage, which now literally extends around the world, is progressing at so rapid a pace that we open our daily paper with curiosity as to its latest developments. What promises to be the most important of these has just occurred in Great Britain—the forming of a Parliamentary Committee for the express purpose of pushing a woman suffrage bill. This is known as a Conciliation Committee. The Earl of Lytton is chairman, and its members represent every political party in the House of Commons. Among the Unionist members the name of the Hon. J. Henniker Heaton is familiar to American readers; there are various representatives of the nobility; many of the most distinguished Liberals, and those able exponents of the Labor party, Keir Hardie and Philip Snowden. The bill has been introduced by another eminent member of this party, David J. Shackleton.

The proposed measure is not the one on which all the suffrage organizations have heretofore been united—that is, one demanding the franchise for women on the same terms as granted to men. These come under four heads: A man in order to vote must be either the owner of property; an occupier paying rent, no matter how small; a lodger, paying not less than $50 a year for a room or rooms, or a university graduate. Husband and wife cannot vote on the same qualification, and it is principally for this reason that the Liberal Government has refused to enfranchise women. They have feared that the single women who were property holders or university graduates would be of the class who would vote the Conservative ticket, and woman suffrage therefore would tend to lessen rather than increase the strength of the Liberal party.

The bill proposed by the Conciliation Committee, which had its first reading on June 14, excludes the women university graduates, the lodgers and the owners of property unless they occupy it. In other words, it gives the franchise only to "occupiers." The distinction between these and "lodgers" is very slight. If one occupies only a single room and has complete control over it—as the English express it, if he carries a latchkey—he is an "occupier." This is the case even tho he lives in rooms or a house provided by his employer as part of his wages—his vote then is usually referred to as the "service" franchise. Men occupying lands, farms, offices, shops, etc., are listed as "occupiers," and may vote.

For many years all women situated as described above have possessed and used the *municipal* franchise, and they have been demanding that this be extended to include the Parliamentary. This new bill, however, would give it only to "occupiers." Nevertheless, it has been accepted by the large suffrage organizations in the spirit exprest by the oldest and most conservative, of which Mrs. Henry Fawcett is president:

"On behalf of the National Union of Women's Suffrage Societies, comprising 190 organizations of men and women in every part of Great Britain, we write to give our earnest

support. . . . The present electorate consists of 7,705,717 men. This bill would add to it approximately 1,000,000 women. It falls short of the demand made by the suffrage societies, but on the other hand it admits the great principle for which we stand—that sex should not, like crime or lunacy, form a disqualification for the most elementary of the rights of citizenship."

The Women's Social and Political Union—the militant "suffragettes," Mrs. Pankhurst's society—have given the same kind of approval to the bill. It is better, they say, that a million women should have the ballot than that none should, and the granting of the suffrage to that vast number must inevitably lead to its extension just as it has done in the case of men. The large Conservative and Unionist Franchise Association, made up from the women of the Primrose League, in its acceptance said:

"The passing of the measure in its present form will obviate many difficulties. . . . It removes the sex disability and acknowledges that the principle of representation with taxation should apply to women as well as men."

This association also exprest the Conservative view when it said: "The bill, while removing this great injustice to women, would be a lateral extension of the franchise only and not a lowering of the basis on which it rests." Before this article is read the Liberal Federation of Women, with its immense membership, will have held its annual meeting and agreed to the bill.

A measure therefore is now before the Parliament which has received the indorsement of all the woman suffrage organizations in Great Britain, and it is in the hands of a committee composed of members from all political parties. The chairman, Lord Lytton, said in a letter to the London *Times:*

"Every section of suffragist opinion has agreed to accept the proposed bill as a satisfactory instalment of justice and all the conditions of a non-party settlement have been fulfilled."

Commenting on this, *Votes for Women,* the official suffrage organ, says:

"It is indeed doubtful whether any bill dealing with any subject has ever produced such unity among people of divergent political faith. It will not be possible, therefore, for the Government to refuse facilities to the bill on the ground that it is controversial, for the support accorded to it is as nearly unanimous as is humanly possible."

Never was there so opportune a time for a woman suffrage measure to come before the House of Commons. The last election resulted in a political chaos in which no party had a working majority. The situation was still further complicated by the death of the King. The Government has announced that it will not introduce at the present session any "contentious" measures because of the strained relations between the two Houses of Parliament, and so it has no important bills under consideration. There has been no time in recent years when a woman suffrage bill could not have been passed by a two-thirds majority of the House of Commons, as has been fully demonstrated whenever one has had a "second reading." The Government—the Cabinet—however, has never permitted such a bill to be put upon its final passage.

Until the present time it has been very probable that the House of Lords would have vetoed a bill extending suffrage to women, but now its own status is so precarious it is not likely that it would oppose a measure which received a large majority in the Commons and seemed strongly supported by public sentiment. Lord Lytton says:

"There must be bitter reaction of feeling if the newly awakened hopes are disappointed and this golden opportunity is lost. Everything depends upon the Government; the issue is in their hands alone An overwhelming majority of the present House of Commons supports the bill, a majority drawn from the Liberal, Unionist, Irish and Labor parties alike. Nothing is now wanted but for the Government to grant the necessary time for putting the bill into law."

There will be no organized opposition to the bill except from the Anti-Suffrage League and the Adult Suffrage Society. The latter are determined that no woman shall receive the franchise except thru a bill which gives it to every adult person in Great Britain without any qualification, but there is little strength behind its demand. This proposed bill, it is true, grants it only to women "occupiers," but this class includes about 90 per cent. of all who would be enfranchised even if the suffrage were given to women on the same terms as to men. The Labor party has made a careful investigation and it finds that 82 per cent.

of those whom the present bill would enfranchise would be self-supporting women. Philip Snowden says:

"It is, of course, a compromise, but it must be this bill or nothing for a long time."

Mrs. Humphry Ward, organizer and president of the Women's National Anti-Suffrage League, published in the *Times* of June 4 an official manifesto two columns in length against the bill, "which," she says, "is destined to go the way of all its predecessors." Those who have admired Mrs. Ward's ability in novel writing will receive a shock from the reading of this article—altho it may be said that she never showed greater proficiency in the line of fiction. Over half of it is devoted to the suffrage movement in the United States, which, she declares, "has not gained a single real advantage in twelve years, while the movement of opposition among women themselves is constantly strengthening." She takes as the principal basis of her argument the report on "Equal Suffrage in Colorado" recently prepared by Prof. Helen Sumner for the Collegiate Woman Suffrage League of New York. The most unprincipled book reviewer who ever tried to mislead the public could not exceed Mrs. Ward's attempts along the same line. She painstakingly culled every adverse criticism made by Miss Sumner, separated it from the text, published it without any balancing quotations from her many favorable findings, and then drew her own most damaging conclusions. The article ended by strongly urging Englishwomen to use their municipal franchise and take an active part in local politics, but to leave all large national questions to the wise decision and superior executive ability of men.

All that could be said by Mrs. Ward and her entire association, which claims only a membership of 15,000 men and women, would have only infinitesimal power to counteract the effect of the immense demonstration by the suffragists in London June 18. Ten thousand women walked in procession over the three-mile route from the Thames Embankment to Albert Hall in order to illustrate the strength of the movement for the suffrage. Six hundred of these carried emblems to show that they had gone to prison for their cause. There were five hundred university graduates in cap and gown; scientists, doctors, writers, actresses, teachers, women in all professions; a woman mayor and several city councillors; thousands of wage-earning women; a number of the nobility; and the parade was perfectly managed by women marshals. It ended in a mass meeting opened by Lord Lytton, with Mrs. Pankhurst in the chair, and the $14,000 pledged brought the subscriptions of one year near the $400,000 mark for her organization alone. The cables say the demonstration made a profound impression, convincing the public of the earnestness and determination of the women demanding a voice in the Government. It was wholly under the management of Mrs. Pankhurst's society—the Social and Political Union—of which Mrs. Ward said in the *Times* article:

"Its movement of violence and outrage, in the opinion of the general public, has seriously put back, if not wholly extinguished, the hope of woman suffrage."

She spoke also of the "irreconcilable differences in the suffrage camp," and yet members of all the societies marched in this procession, all have heretofore agreed on the terms for demanding the franchise and all are now united in support of the present bill. There has been simply a disagreement as to methods of procedure.

One point in connection with the bill now under consideration needs to be emphasized, and the more especially if it shall succeed. The cable dispatches said in regard to it:

"If the militant suffragettes had listened to reason years ago, instead of losing their heads and resorting to hysterical methods . . . they might have been listened to, for there never has been serious opposition to giving women votes, with certain limitations."

Then the same dispatches quote from the manifesto of the Conciliation Committee:

"It is forty years since the first woman suffrage bill passed its second reading in the House of Commons, and the patience and ability of the older societies deserved an earlier reward."

One of these statements so fully answers the other that comment is unnecessary, but here is the point: When the above committee framed their bill they took no step to introduce it until it had been submitted to Mrs. Pankhurst and

received her approval. Their manifesto said:

"The painful struggle of the last four years is an experience no one would wish to see repeated. It is with the object of preventing a continuance of this evil, and of forwarding an act of justice long since due, that we ask for support of this bill."

In all the published statements of the committee members is this dominant note—that the bill must be passed before the "suffragettes" resume their reign of terror. The papers have been saying that the latter "had seen the error of their ways and abandoned their militant methods." As a matter of fact, they stopped fighting simply because there was nobody to fight, as the hands of the Cabinet were tied and legislation was suspended. In the last number of *Votes for Women* its editor, F. W. Pethick Lawrence, says of the bill:

"To let this opportunity go by means to invite a further campaign of militancy more serious, more widespread and with more far-reaching results even than that which we have recently witnessed."

There is no doubt in the minds of those who understand the situation that the anxiety of the legislators to avoid such a campaign far exceeds their desire to do justice to women. The leaders of the militant movement never have lost faith in the effectiveness of aggressive measures; they firmly believe it is only because of these that the woman suffrage question has become a live political issue—and a very large part of the British public agrees with them. It may deplore the necessity for such methods, but it knows that forty years of dignified, constitutional work did not secure a woman suffrage law.

The progress of this bill will be watched with keen interest in the United States, as without doubt its success will help the movement for woman suffrage here. The advocates in this country will also find it advantageous to study the modus operandi by which unquestionably Parliamentary action has been secured in Great Britain.

New York City.

The Gleaners

BY MARY MARSHALL PARKS

Across the stubble-field the wagons go
With lilting laughter and glad harvest song;
And in their fresh-made track, shy pensioners
Advance, vibrate, retreat the whole day long.
The proud, young, feathered mother from the barn
Brings here her fluffy, chirping, yellow brood;
The plump quail feeds, unfrighted and unharmed;
The squirrel feasts and flies; in bolder mood
The timid field mouse waits to fill her nest;
The wee ant staggers off with precious pelf;
And flocks of chattering birds, bold highwaymen,
Take tribute from the loaded wain itself.
The happy children, riding on the sheaves,
Would drive these daring bordermen away.
The farmer, turning hastily around
With kindling eyes and softening face, says, "Nay,
Our bins are bursting with God's gifts. Be still.
They are His gleaners. Let them eat their fill."

Rogers, Ark.

Literature

The Life of Mary Lyon

A GOOD biography is one of the rarest of books, and it has not yet been the fortune of any woman to find her Boswell. It is true that there are two women whose lives are human documents of the first order, but these are both autobiographies, and neither was written in English. One of these is that of Madame de Guyon, who wrote her life at the behest of Fenelon, without reserve and almost, one might say, without self-consciousness; and the other that of the posing and self-conscious Marie Bashkirtseff, who displays her inmost self, despite her efforts to build herself into such a heroine as she desired to appear. These, however, are not the work of the biographer, and so far every woman who has undertaken to write the life of one of the great women whose lives belong to the world and ought to be registered in the archives of humanity has fallen far short of her opportunity. The general fault is that the biographer writes around and about her heroine, with gloze and comment, and note of exclamation and admiration; instead of going straight to the point and tearing the heart out of her subject, letting her exhibit herself in word and action without the intervention of the personality of the writer.

From this standpoint Miss Gilchrist's *Life of Mary Lyon** is a second-best. But it is unfortunately the best we have, and the best we are likely to have for many years to come; and it does preserve and set in order much that the world ought to remember of the life and thought of one of the pioneer women of the nineteenth century. To Mary Lyon, along with some dozen or more of her compeers, and very many lesser helpers, is due the revolution in the position of women which to the future historian of civilization will be one of the outstanding features of the present era. The advent of democracy and side by side with this new estimate of the right of man to self-government, the emergence of woman from her condition of ignorance, tutelage and subservience—these will be the achievements which posterity will hail as of more consequence than the peopling of a continent or the subjugation of nature by machinery. And in order that woman shall be free, it is necessary that she be educated. Mount Holyoke is a recognition of this necessity, and Mount Holyoke exists today as the material expression of the imagination, the courage, the personality and the genius of Mary Lyon.

The chapters in Miss Gilchrist's book which are devoted to the founding and organization of Mount Holyoke Seminary are full and interesting. They have the touch of reality that comes from intimate knowledge of the events and people described. For their sake, and for the sake of the loving and grateful descriptions and appreciations of Mary Lyon which Miss Gilchrist has carefully collected, this little Life will be welcomed by all the generations of alumnæ of Mount Holyoke who had any personal knowledge of its founder, and by later generations to whom the traditions of their alma mater are dear.

*THE LIFE OF MARY LYON. *By Beth Bradford Gilchrist.* Boston and New York: Houghton, Mifflin Yale. New York: The Macmillan Co. $1.50.

About Novelists

SOME fourteen years ago Professor Phelps,[1] then in the chair of literary state at Yale, introduced the study of modern novelists as a distinct course in the elective system, and for a year, as he tells us, pressed the experiment. A hailstorm of criticism resulted, which seems to have left his ears tingling, but his heart was left unaffected, it would seem; for, tho he has not repeated the experiment, he is quite convinced that it would be "perfectly safe to do so." It happened to the writer of this note some years ago to

[1]ESSAYS ON THE MODERN NOVELISTS. *By William Lyon Phelps,* Former Instructor in English at Harvard; Lampson Professor of English Literature at Yale. New York: The Macmillan Co. $1.50 net.

arrive at the room of a senior in a college—not Yale—at the early hour of 7 a. m., and to find there, in his dressing-room, a tall youth sitting before the fire, wrapped up in the last chapters of an exciting novel. Now, who ever knew a college student in his fourth year to rise at that unearthly hour to read Demosthenes? The proof of the pudding is in the eating. Whatever effective stimulus the study of the modern novel gave to the pupils in the lecture room at Yale, it is a sure thing that Professor Phelps read enough in novelistic literature, French, German and English, to equip him with abundant matter for his lectures, and this matter furnishes him with a range of illustration of which he has availed himself in these essays. They are not simply *on* novels, but round about novels. One is struck with the ease with which he glides about among the hardy men of the quill, jogging their elbows when they are dull, pointing out the particular corner of the Bowery where the largest crowd of "litery fellers" is gathered, and in the libraries of hard-working kings, indicating the particular books of imagination that will best serve the royal need at a pinch in the study of men. In the dozen essays here brought together he touches no unworthy theme, and he treats them all with the felicity of a trained critic. De Morgan he would obviously recommend to presidents "in their hours of ease." Howells is rightly placed at the head of the modern school of American fictionists—the truest, sanest student of the exact thing we are, but with a Tolstoyan twist in his later books that would make us the thing we ought not to be. We are sinners, with a little peppering of the saintly on Sundays. Mark Twain's "Huckleberry Finn" and "Tom Sawyer" and "Pudd'nhead Wilson" are earthy creations, but with a glint of the stars *in posse*. They measure the range of the great humorist's powers in characterization, and point to a gap in the line of great dramatists that might have been filled if Mr. Clemens had not become "Mark Twain." Thomas Hardy, Henryk Sienkiewicz, Sudermann, Kipling, Blackmore, Stevenson, Mrs. Humphry Ward—these show the range of the topics. Professor Phelps's method of treatment is gentle, kindly, but shrewdly penetrative, so that the reader will find himself in sympathy with his judgments oftener than he will be led to expect from the excursive character of the opening essay.

Of a very different form and method in treating his matter is John Erskine,[2] who in half a dozen valuable studies has given us, with the free hand of a modern scholar of taste and discernment, fresh biographies of some of our old and most likable novelists: Brockden Brown, Simms, Cooper, Hawthorne, Mrs. Stowe and Bret Harte. The choice is good—representative, in the best sense, of the pioneer stage of American literary movement. These men were all on the frontier, explorers in the somewhat wild forest lands of our national life—none better than Simms for the stirring action and passion of the Southern seaboard; none deeper than Hawthorne for the underlying sterling virtues and the extreme strenuosity of the Puritan conscience. Bret Harte and Mrs. Stowe were fairly children of two widely differing social conditions—the one flourishing the pistol of the gambler, the other waving the decalog among the converted. Of these varying elements in our national uplifting Professor Erskine has a discriminating sense. It is to him a serious study. Quite as well as any of our recent critics, he has uncovered the roots—in Hawthorne, for instance—of the American growth in the literary world. He had the lily root's roughness of temper, inheriting it from the Puritan magistrate who sat on Sunday in the square pew under the thunders of the Puritan pulpit. Professor Erskine is right in tracing Hawthorne's energetic silence to a race of silent women and men of whom he finds only one an "inefficient Puritan." If he errs at all, it is in following Henry James and Mr. Brownell in failing to lay sufficient stress on a certain activity of observation in a community quite worthy of close, silent study. Concord and Salem were no more a limited field wherein to study strong human character than were Stratford and London in the time of William Shakespeare. There

[2] LEADING AMERICAN NOVELISTS. *By John Erskine, Ph.D.*, Adjunct Professor of English in Columbia University. With six portraits. New York: Henry Holt & Co. $1.75.

were naval commanders *in esse* and *in posse*. There were magistrates who only wanted the scarlet robes and the notched circlet of gold on their heads to tell us what real kings should be, and Hawthorne's notebooks and the reports of his habits are full of evidence that he wasted no time in getting at the kings of mind at close range. If he talked little, he observed more. If he avoided the conventionalities, it was that he might the better trace the realities. He could not have become the powerful delineator of passion and emotion he was without having in him the possibilities of such passions, nor could he have so reproduced them in vivid action if he had not given those silent years to the deepest study of human life in its strongest human relations. The notebooks give us sufficient hints of the sources of his power in this direction, as they give us abundant illustration of his never-ending practice in style. Now that Salem is restoring the original House of the Seven Gables, and refitting Hepsibah Pyncheon's little corner shop with the antique dainties, it is well to call attention to the skill of the wily romancer in concealing not only the house, but his own wanderings in the byways of Salem in search of the stern old judge, the helpless Clifford, the delightfully sunny Phœbe, and the typical lady of a faded gentility. Mr. Erskine seems to have the skill, the patience, and the insight, and the reserve of years to do justice to this neglected tract of Hawthorne's preparation.

Marion Harland's Autobiography. The Story of a Long Life. New York and London: Harper & Brothers. $2.

It may be a surprise to some readers of this book who have thought of Marion Harland (Mrs. Edward Payson Terhune) as a typical Virginian to learn that she comes of Northern no less than of Southern stock. Her father, Samuel Pierce Hawes, was a native of Dorchester, Mass., born in the homestead of his grandfather Pierce. He began work at fourteen with a Boston merchant, and at sixteen moved with his employer to Richmond, Va., where he resided for the rest of his life except for a few years of experiment at country store keeping. If, as Mrs. Terhune believes, she inherits her talent as a writer from her maternal grandmother, a woman of literary tastes and many accomplishments, doubtless her remarkable industry and capacity for work are an inheritance from her New England ancestors. It is to her father's memory that she dedicates this autobiography, "with reverent tenderness," and, thruout the book, she bears beautiful testimony to her father's wise and loving guidance. Mary Virginia, the third child of the Hawes household, was an observant, imaginative girl, with retentive memory, who fell asleep at night making stories to herself, but was reticent as to her rhymes and tales until she unbosomed herself to a sympathizing governess, who encouraged and helped her. She began her first book when but sixteen years of age. This she rewrote after the *Southern Era* had published a prize story from her pen. For that story she adopted the pen name she has retained thru life. "Alone," which was published in Richmond, at her father's expense, in 1854, had phenomenal success. How far this success was due to Mr. Ridpath's persistent advertising cannot be known, but the story of his interest in the novel is one of the striking incidents here recorded. Equally unusual is the story of the chapter entitled "Our True Family Ghost Story." As Mrs. Terhune's memory runs back a quarter of a century before the Civil War, she has been able to depict family life in Virginia at first hand, and to give graphic accounts of election days, barbecues, and of fierce ante-bellum political feuds. She has written many books, but, most of all, she values those that were written in aid of young housekeepers, like "Common Sense in the Household." And she wisely counts her influence for good thru lectures and the "Woman's Syndicate" page of an influential journal of more worth than mere literary fame. Her own family life, with husband, children and grandchildren, is most happily drawn, and no better tribute was ever paid by a minister's wife to his parishioners than is here written in acknowledgment of the devotion of the church in Newark, N. J., which Dr. Terhune shepherded for eighteen years. It is an interesting and readable book and the story was well worth telling.

Swimming. By Edwin Tanney Brewster. Boston: Houghton, Mifflin Co. $1.

Mr. Brewster thinks that the fundamental principles of swimming are just as well learned outside of the water as in, especially by very young children, and that the mother who allowed her daughter to go swimming but cautioned her not to "go near the water" was not so mistaken after all. The theory of the different strokes is carefully worked out, tho rather too technically on the whole and sometimes hard to follow, and the book is well written and readable.

Housing Reform. By Lawrence Veiller. New York: Charities Publication Committee. $1.25.

Among other positions connected with his specialty, Mr. Veiller has occupied that of secretary of the Tenement House Committee of the New York Charity Organization Society, and that of First Deputy Tenement Commissioner during the two years immediately following the establishment of the Tenement Department in New York. These facts seem to have tempted him to treat New York as the universe, and his own observation as dogmas. In fact, the volume, so far from being an account of "Housing Reform," might be described as the "Reflections of a New York Tenement House Reformer Who Has Looked upon His Work and Found it Good." Mr. Veiller makes nothing but the slightest reference to housing reform in other American or European cities, and the municipal tenements of England, Scotland and Germany, about which there is much curiosity both among laymen and social reformers, instead of being described in a way to instruct the dispassionate inquirer, are dismissed with the trite observation: "That municipal tenements have succeeded in Europe is hardly a reason for urging such an experiment in America," which, whether true or not, does not help the reader who is disinclined to accept Mr. Veiller's judgment as final, to form an intelligent judgment of his own. *Housing Reform* is not comparable as a source of information upon its subject with "The Tenement House Problem," of which Mr. Veiller was one of the editors when it was published in 1903. It is greatly to be desired that the Sage Foundation, with its ample resources, should give us a volume of simple facts about housing reform in Europe as well as in America, for these facts are in very great demand and are at present not available in any convenient form.

Half In Earnest. By Muriel Hine. New York: John Lane Company. $1.50.

There is something painful in the sight of utter selfishness. It is only less painful than that of absolute self-forgetfulness. When you have a meeting of a man and woman who personify these opposite qualities, and who are young, handsome and without moral restraint, and who are idling away delicious days in the island of Capri, shipwreck is imminent. The young man who is the sorry egoist of Muriel Hine's novel, *Half in Earnest,* is the secretary of an English politician, taking a holiday from politics and a discreditable love affair with his chief's wife, in the south, when he meets Candida Clifton, married to her guardian, who, aged and careless of his girlish wife, allows her to wander thru Italy alone. There is a fine opportunity for a thoroly selfish man, and Derrick Kilmarney makes the most of it, for Candida is very beautiful, innocent and unguarded by even an atom of self-regard. Her purely nominal marriage, which she describes in her pathetically childish way, "It was only exchanging one parent for another," after her father's death, is no restraint to the sudden temptation that assails her when she finds herself deeply in love with the brilliant egoist who has as many sophistries at his tongue's end as tho he were Mephisto in person. Candida acts upon his theories; she really believes in his tinsel affection; she does what her namesake in Shaw's play only talked of doing—gives her love as freely as she "would wrap her shawl about her lover if she should find him freezing in a storm." Candida has a good chance to find out how such theories work out in practice, but thru frightful suffering and the generosity of another man—a Puritan—she is saved from utter disaster. Like Septimus in Mr. Locke's story of the same name, John Newcomen gives the shelter of his name to a girl in dire extremity, but there is a

difference in the giving. Septimus, in his unthinking generosity, wraps his care about poor little Emmy and her child, altho he has no love for her in his heart, but John Newcomen loves Candida. Septimus is capable of a divine rashness thru pure pity; the hero of *Half in Earnest* is no less noble but less lovable than he. As for the young man whose favorite fetich is "freedom," this very unconventional novel may teach him, perhaps, if he has any humility left in his hardened soul, that freedom from moral restraint means freedom to wreck and destroy the very love in whose name and against whom he has sinned.

Literary Notes

....If a reader wishes to learn the best that is known of meteorology let him send to the Smithsonian Institution, Washington, and get No. 1689 of its publications, a volume of 625 pages containing 25 papers, mostly translations of studies of the highest value on the subject, collected and edited by Prof. Cleveland Abbe, of the United States Weather Bureau.

....Clifford G. Roe, some time Assistant State's Attorney at Chicago, has given a startling account of existing conditions in Chicago and elsewhere regarding the white slave traffic. It is by no means pleasant reading, but the effect of his volume, *Panders and Their White Slaves,* cannot help but exercise a good influence. The attention of many people will be drawn to the enormities existing as set forth in this book and the publicity for which this book makes will tend to cure an evil which thrives in darkness. (N. Y. Revell. $1.)

....With the firm conviction that authority is a persistent fact in the religious life, and with full recognition of the evils that have come from its exercise under the crude conceptions of the past, Mr. J. H. Leckie has formulated and elaborated a doctrine of *Authority in Religion* (Scribners, $2 net), with its ultimate basis in "the Communion of the Soul with God." By so doing he finds all external authority differing in degree but not in kind from the authority of the individual conscience. The book is well written and especially suggestive in its treatment of the authority of Christ.

....The thin-paper edition, introduced some years ago by Messrs. Dent & Co. in their handy, handsome and inexpensive reprints of the classics of English literature, apparently continues to find favor in this country. Messrs. Thomas Y. Crowell & Co. have recently added to their "Thin Paper Sets," the works of George Eliot, including the "Essays and Poems" contributed by her in the early days of her career to the *Westminster Review.* The type, if small, and a little too closely printed for any but the best of eyes, is clear-cut, but the ink is perhaps a little lighter than was necessary with such apparently excellent paper as that employed. The type-page is not black, but gray. However, this form of republication is the only one that will bring the classics within handy compass, fitting the pocket without weighting or packing it unduly (8vo., 8 vols., limp leather, in box, $10). The same publishers have added to their "Thin Paper Poets"—curious appellation—*The Poems of James Russell Lowell,* with a biographical sketch by Nathan Haskell Dole, and the *Dictionary of Quotations* from English and American Poets, "based," to quote the title-page in full, "upon Bohn's edition, revised, corrected, and enlarged with twelve hundred quotations from American authors, by Anna L. Ward." This dictionary was first published over a quarter of a century ago, but, of course, retains its usefulness (12mo, flexible leather, each, in box, $1.25).

Pebbles

KING EDWARD was what every Englishman would like to be but daren't. The new King is what every Englishman pretends to be but isn't.—*New York World.*

THERE was an old lady named Fitch,
Who heard a loud snoring, at which
She took off her hat
And found that a rat
Had fallen asleep at the switch.
—*Princeton Tiger.*

OBERLIN was the first coeducational college in this country. In the early days they had a rule that in case there was but one man and one woman in a room, at least one chair should be between them. One evening an instructor, passing one of the small sitting rooms, was horrified at beholding a young man and a young woman occupying the same chair.

"Sir," he demanded of the man student, "what is the meaning of this outrageous behavior? Do you not know the rules of the college?"

"Why—er—don't they say that if a man and a girl sit alone in a room they shall have one chair between them?"—*Everybody's.*

THIS is the tallest corn story of the season, and is being told among the traveling men over the State. It is said to have been a letter written home by an Eastern visitor: "Most of the Kansas streets are paved, grains of corn being used for cobblestones, while the cobs are hollowed out for sewer pipe. The husk, when taken off whole and stood on end, makes a nice tent for the children to play in. It sounds queer to hear the feed man tell the driver to take a dozen grains of horse feed over to Jackson's livery stable. If it were not for the soft, deep soil here I don't see how they would ever harvest the corn, as the stalks would grow up as high in the air as the Methodist Church steeple. However, when the ears get too heavy, their weight presses the stalk down to the ground on an average of 92 feet, and thus brings the ear near enough to the ground to be chopped off with an ax."—*Kansas City Journal.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President to the Labor Unions

THERE are occasions when a man can be pestered into doing his duty, or more likely frightened into it. The method has become a recognized policy with those who want their schemes accomplished. Who has not received letters beseeching him to write to his Congressman, urging him to vote for an excellent bill which ought to be passed, but which may be shoved aside if the member is not stirred up by a multitude of letters to push it to a vote? Then the Congressman is deluged with hundreds of letters and telegrams until, wearied by their continual coming, he yields, and takes and asks credit for doing what he ought to have done anyhow. To be sure, the Congressman by this time has learned, when he receives such a sudden flood of letters, that they have not come by the independent concern of his constituents, but because some one earnest friend of the measure has sent around a thousand requests that such letters be sent. Yet they have their influence, and often a good influence, spurring a sluggish will to do what ought to be done.

Unfortunately, this method of influence may be used to frighten the Congressman into voting for a bad measure, or one of doubtful value. The Congressman wants to be re-elected, and therefore wants to please the dear people, and is quite ready to assume that what the people want, the people who want it enough to take trouble to ask him for it, must be right. It is not difficult in this way to get bad measures enacted.

But that is not the way to influence William H. Taft. Not individuals alone, but numerous great organizations of allied workingmen, asked him to give his support to a bill which they had had introduced into Congress, the purpose of which was to make it safe—not *lawful*—to initiate certain boycotts in restraint of trade. To one of these, one of the most respectable, the President replied with an emphatic No. The president of the Brotherhood of Locomotive Firemen and Enginemen's Union, representing 798 delegates in attendance at their biennial union, telegraphed Mr. Taft in a rather rude way, telling him that the papers reported that he favored "using the people's money to prosecute labor in their efforts to better conditions," and presenting a "protest against the unjust policy." President Taft selected this telegram as the occasion for a reply. He reminded them that the bill which had passed the House repealed no law, but simply appropriated money for the enforcement of the existing anti-trust laws; and that the amendment they favored provided that none of the money appropriated should be spent to prosecute laborers or labor organizations that might violate the law. The President told them that this would be class legislation, and that neither he nor they should seek it. Accordingly, against the desire and request and protest of all these people, he used all his influence and persuaded the House of Representatives to revoke its action and drop the amendment.

This act required more than usual courage of conscience. Mr. Taft may fairly be presumed to desire a re-election. The organized labor unions are a numerous and powerful body. It may be presumed that they will be indignant and disinclined to vote for a man who

has defeated a measure which would protect them in their boycotts. He knows how much a judicial decision of his on injunctions was used against him. He might have been silent and let Congress pass the bill with the amendment. Congressmen had yielded, many of them. They were afraid of their constituents. Not so President Taft. In the plainest way he refused the request of the unions, told them it was unjust, and then he brought to bear all his influence to defeat the amendment, and he succeeded. That may have been bad personal politics, but it was right, and it was brave. If it costs him a re-election he will never regret that he did what he believed to be right.

Our Longest Days

FROM 4 o'clock in the morning until 8 o'clock at night is a good, long stretch of time. Every minute of it is instinct with life. A leaf that does not grow must die. The birds adjust themselves to it, and begin just at daybreak with a choral of joy. Pity it is if there is nothing half as grand in human life, either at break of day or at sunset. We especially like the fine adjustment of living to joy. The birds wonderfully understand it, and where you will give them half a chance the animals understand it.

If we follow the birds we shall be up with the day, and with the song in our hearts, will be ready for work. But let us clearly understand that we have ahead of us, in that case, fifteen hours of toil. This reckoning starts us a little ahead of the sun, but gives us full daylight for our tasks. We do not advocate it unless we can undertake it on precisely the same principles as our allies, the songsters.

We understand the prevalent rage against long days of toil, and we believe that the whole drift indicates weakness rather than strength. It is not the voice of life. Labor properly conducted is not counted by hours. With a good heart and with a desire to achieve, one may better work twelve hours a day than perform eight hours of perfunctory toil. Our laboring class must look out for this drift away from honor in achievement. It will never do to create a short-houred race. What we want is a perfect alliance of brawn and brain.

What is to be regulated by law is that heartless, purposeless affair, sold out at so much an hour. Work is something else; to work is to do something, to create something, and always to be master. There is no boss over the right workman. We know what we are talking about, and we are not advocating any system of work that shall wear out or break down the worker. What we believe in is that glorification of achievement that puts song into toil, and robs labor of its task element.

Let us wheel into line with the birds, and see if we cannot fill the longest days with whistle and song. We sincerely believe that we have been moving in the wrong direction; that the relief of the laborer does not lie in the way of reducing his hours, but of lightening and inspiring them. Those who believe in the "back to the land" movement are certainly not going to escape a lot of work. The farmer can rarely get on with less than the full summer day; but with machinery and science he is master and not slave. There is nothing in modern machinery, or in our new social life, that permits or requires a withdrawal of power from achievement. Give us more muscle, more machinery, more science; but the hand must still remain lord of the material world.

Our boys and girls must learn not only how to work, but to be proud of work; happy in achieving, and never so proud as in a good mastery over the impediments that Nature purposely places in their way. Eliminate the whine. Sing with the sun; and let every hand-stroke give joy to the clean vitality of a resolute citizen.

Another Sort of Commencement

BOOKER WASHINGTON'S Commencement Day is a revelation. It is industrialism brought to the front. It dispenses with all the old ceremonies, and, as might be expected, it is divorced of the frivolities which have become associated with the classical commencement. It was the twenty-ninth annual exercises of Tuskegee Institute, and President Washington was equal to the occasion.

The cheap and rather tiresome routine of parades, smokers, addresses, gowns—as *The Literary Digest* expresses it, "the antics"—of the ordinary commencement, were not in sight. They would certainly have been out of place, as much so as a sea shell incasing a land animal. Our great trouble is that in educational matters we have not been willing to let "the dead past bury its own dead."

The program, allowing for racial taste and power, gave music as a strong feature—a modicum of classic music, but mostly folklore songs. There was nothing trivial or nonsensical about the singing, as has come to be the way so frequently with college songs; but there were melodies that came from the heart and went to the heart. So far it was the negro race at its best. It remained to see whether the negro race could come out as distinctively in the rest of the program.

The platform made no show of titled dignitaries, but it was covered from end to end with symbols of the work done by the graduates. At one end of the platform a fireplace was built of brick and mortar and tiling. Then came a section of a house, unfinished, but exhibiting the constructive skill of the pupils. Engines and turning lathes came next, and after them a milk separator, and whatever else indicates scientific dairying. Horticulture had full illustration; and housekeeping.

One might almost imagine himself at a first-class agricultural fair, when his eyes fell upon groups of splendid vegetables and fruit and plants grown by the students themselves—and why not? This had been the work of these boys and girls, and they were to graduate into the world as industrial citizens. In the afternoon the stage was reset with machinery and appliances for working the trades taught by the Institute. A blacksmith's forge and anvil were accompanied by a shoemaker's bench, and some of his work. The girls made an exhibit of their skill in dressmaking and mattress making.

At the whistle of the steam engine, which was on the stage, there was an exhibition of the different industries. There were a few speeches; one of them, the salutatory, being a plain, straightforward talk about how to manage a dairy. The salutatorian appeared in his business uniform, and while he analyzed milk, illustrating the most approved methods of sterilizing and butter making, he talked in a straightforward way that everybody could understand. A young woman discussed the growing of flowers as an occupation, and she, too, was dressed in the very clothes that she would use in the greenhouse or garden. This was the style of the oratorical side of the program.

The baccalaureate boiled into a five-minute, straight-from-the-shoulder talk, from President Washington, gave plain and simple advice, directing his graduates into a practical and practicable method of making themselves useful and successful.

We are not offering this commencement at Tuskegee as an entire novelty. Something very similar has occurred in connection with our agricultural colleges for the last ten years or more. It seems to fit to modern life, thought and needs; and we do not see that the absence of gowns and degrees and orations will be severely felt by the people. If the object of commencement is to show what the graduates have learned, is not this the right way? Why not have a modernized commencement?

The Session of Congress

It was a common prediction a few months ago that very little would be done by Congress during the session that ended last week. At that time nothing had been done. In the Senate the Republican majority was crippled by the defection of the insurgents who had so earnestly opposed the Tariff bill. In the House, revolt against Cannonism had compelled a change of the rules and was threatening so to affect the partisan majority that it would be unable to control legislation. Prominent representatives of the Administration were unwisely, in public addresses, widening the breach that separated insurgents from regulars. Surely there was danger that the President and his party would fail to keep the promises of their platform. But the President refrained from such public criticism of insurgents or progressives as

some of his associates were expressing. He sought to conciliate the factions. And in time the breach narrowed. Regulars accepted insurgents' propositions in part, and insurgents insisted less strenuously upon their demands. It was shown that business could be done in the House under the modified rules, and that the majority there was not going to pieces. Indeed, nothing had been accomplished before the rules were changed, but all that makes the session memorable has been done since the change was ordered.

The President was learning more and more about legislators and their ways. He was learning how and where and when his influence could be exerted most effectively in support of the party's legislative program. As the end of the session drew near, he permitted nothing to divert his attention from the work he had laid out for himself. He even gave up his cherished plans for a brief visit to his university on the day when his son was to be graduated. Realizing that much depended upon his presence in Washington, he remained there, promoting by tactful argument and persuasion the enactment of important measures to the support of which his party and himself were committed.

It has been a remarkably fruitful session, and the exceptional record of it is due largely to the President. Below we mention the most important measures upon which final and favorable action was taken:

Railroads. Bill including provisions for a Court of Commerce, control of telegraph and telephone lines, approval of proposed rate changes before they can be enforced, inquiry and action concerning rates by the Commission on its own initiative, and a commission to make investigation relating to issues of stocks and bonds.

Postal Savings Bank bill, to encourage thrift.

Statehood for Arizona and New Mexico.

Conservation. Bill giving the President unlimited authority to withdraw public lands, the same to be restored for settlement only by himself or by act of Congress.

Conservation. Bill providing for the agricultural entry of the surface of coal lands, the coal being reserved for separate action. This may open 60,000,000 acres to settlement.

Reclamation. Bill for the issue of $20,000,000 in certificates of indebtedness for the promotion of approved projects.

Tariff. Appropriation of $250,000 to be used in ascertaining the cost of production here and abroad.

Peace. Resolution for the appointment of a commission of distinguished Americans to cooperate with representatives of foreign Powers in a movement against wars.

Bill requiring publicity for campaign funds.

Bureau of Mines and Mining. Bill creating one, with an appropriation of $500,000.

White Slave Traffic. Bill dealing with interstate aspects of this evil.

Reorganization of the Lighthouse Service.

Provision for a commission to inquire as to business methods in the Departments and to promote economy.

Appropriation of $300,000 for raising the wreck of the battleship "Maine."

Extension of the use of safety appliances on railways; also a bill requiring railway companies to send to the Commission full reports of accidents.

Bill for a Commission of Fine Arts.

This is not a complete list. Many other measures of less importance might be added, and it should not be forgotten that the great appropriation bills received their due share of attention. It is true that some of the long bills which were passed had been shorn of provisions—the proposed regulation of railroad stock and bond issues, for example—which many demanded; but it occasionally happens in legislation that some things must be sacrificed for the preservation of others. The railroad bill creates a commission to inquire concerning stocks and bonds. Only a part of the elaborate program relating to conservation was carried to enactment, but it was a very important part. Those bills in the Administration's list which failed, or upon which action was deferred, will not be greatly missed. Among them are the ship subsidy bill, adversely affected by a scandal which has been the subject of investigation; the Federal Incorporation bill for Trusts, against which there were weighty objections; and the Injunction bill, which Congress will consider hereafter.

The record of the session is one that will assist the Republicans at the coming elections. Two or three months ago it could fairly be said that they were in danger of losing the House. Their Tariff bill is still a heavy weight to carry. They cannot get rid of it. But the party's achievements at this regular session tend to reduce the force of the tariff opposition. It appears to us that if the Republicans take a wise course in

the campaign they will retain a majority in the House, altho it will not be a large one. Because the commendable legislation of the session is so closely associated in the public mind with the President and his influence, quietly and legitimately exerted, he must gain in popularity by reason of it. He has won respect and admiration from many who regarded him a few months ago with misgivings. Thruout the latter part of the session he was growing in force and in that knowledge of national legislators and legislation which a President should have. It is unfortunate that he was not so well qualified and equipped when he was confronted with the problems and perils of tariff revision.

An American Peace Commission

LAST week both the Senate and House passed the bill bearing the name of Congressman Bennet, of New York, authorizing the President to appoint a commission of five members "to consider the expediency of utilizing existing international agencies for the purpose of limiting the armaments of the nations of the world by international agreement, and of constituting the combined navies of the world an international force for the preservation of universal peace." The commission is to make its report within two years, and a sum of $10,000 is allowed for its expenses. It is announced that President Taft will offer the chairmanship of the commission to Mr. Roosevelt.

This bill is nothing short of a ways and means measure to bring about a world federation, limited to the maintenance of peace. As the commission must make its report within two years, its recommendations will unquestionably serve as a basis for the action of our delegation at the Third Hague Conference in 1915. Thus for the first time in the annals of history a great nation has officially recognized that the true philosophy of the peace movement requires world federation as a prerequisite for universal peace. The United States of America announces to the world that she is ready to champion this idea in the council of nations.

As the importance of this bill in the history of the peace movement can scarcely be overestimated, we take the liberty of giving some account of its origin and history. In the issue of THE INDEPENDENT of April 22, 1909, Mr. Henry C. Granger published an article entitled "Roosevelt—A Suggestion," the gist of which was that the world is ready for practical efforts toward universal peace, that the United States is the nation to lead in the movement, and that Theodore Roosevelt is the one American most likely to succeed in gaining the cooperation of the other nations.

We indorsed Mr. Granger's suggestion editorially and it subsequently evoked wide comment in the press of the land. Mr. Carnegie liked the idea, and the New York Peace Society, of which he was president, circulated the suggestion far and wide. No editor championed the proposition more zealously than Mr. John Temple Graves, in the New York *American,* whose many supporting editorials gave the idea wide currency thruout the land. Mr. Granger in the meantime was most active. He enlisted the interest of his friends in this city, and finally a small group of them met last autumn at dinner, to talk the matter over. The host of the evening was Mr. W. J. Bartnett, a California capitalist who had become first interested in internationalism thru the International Institute of Agriculture, which his friend, David Lubin, a fellow Californian, had so successfully organized. The others were Mr. Oscar F. Crosby, a graduate of West Point; Mr. W. C. Peyton, Dr. F. M. Willis, Judge George N. Nelson, Mr. Henry C. Granger, Mr. W. H. Short, the secretary of the New York Peace Society, and the managing editor of THE INDEPENDENT. This little group thereupon organized "The World Federation League," and straightway set about to increase its membership and influence. It was surprising to see how the idea took and how many men agreed to join, not only in New York, but thruout the country. The League straightway prevailed upon the Hon. Richard Bartholdt, of Missouri, the chairman of the American group of the Interparliamentary Union, and the first man who ever stood up in a parliament of the

world to suggest turning the Hague Conferences into a real international parliament, to introduce a bill into Congress for the appointment of a World Federation Commission, to bring about universal peace. A few of the peace workers were skeptical. But the bill was speedily indorsed by the New York Peace Society, The International School of Peace at Boston, and the New England Arbitration and Peace Congress, held at Hartford, Conn., on May 11. In the meantime, the World Federation League amalgamated with the New York Peace Society and became the World Federation Committee of the older organization, with Mr. Crosby as chairman.

A strong delegation went down to Washington to appear before the Foreign Affairs Committee of the House, to urge the passage of the Bartholdt bill. They were received with the utmost courtesy and cordiality by the chairman of the committee, Mr. Foster, as well as by the whole committee, especially by Messrs. Bennet and Fassett, of New York, Mr. Denby, of Michigan, and Mr. Granger, of Texas.

In the meantime Mr. Roosevelt had delivered, at Christiania, his remarkable Nobel peace address, which was nothing less than a plea for the "Federation of the World," and which at once made him the logical leader in any World Federation movement started in the United States.

Mr. Roosevelt's address, of course, served as a powerful reinforcement to the arguments used by the gentlemen of the World Federation League before the Committee on Foreign Affairs. We have not space here to summarize the speeches, but they can be found in the pamphlet "International Federation for the Maintenance of Peace," Committee on Foreign Affairs, May 7, 1910. The Foreign Affairs Committee, however, amalgamated the Bartholdt bill with an analogous one of Representative Bennet's and reported the new one back unanimously to the House under the name of the Bennet bill which, as we have said, finally passed both Houses last week without the slightest opposition. It is gratifying to remember in this connection that in 1900 the United States Congress passed a resolution requesting the President to negotiate arbitration treaties with all the nations of the world similarly disposed. This was before the day of a single arbitration treaty and when the nations only used conciliation thru diplomacy to settle their differences. During the past twenty years the world has passed from conciliation to arbitration. It is now passing from arbitration to World Federation. Thus our Congress again takes the lead in the peace movement.

We shall defer to a subsequent issue discussion of the problems of world federation and the limitation of armaments that will come before the commission. Here we wish only to emphasize the unparalleled opportunity before Mr. Taft to select a commission of such character, wisdom and experience in international law and such devotion to the cause of peace that their recommendations will have profound weight with all enlightened governments and all thinking men. There are men in the United States today who measure up to the requisite standard. And as for Theodore Roosevelt, to whom Mr. Taft is expected to offer the chairmanship of the commission, no greater or nobler opportunity ever came to him for public service. He has already achieved and ably filled the greatest national office in the world. Now higher work in the international realm awaits him. He must accept the call.

The Discouragement of Thrift

THRIFT is becoming a relatively rare virtue in America, not only because, as we have often pointed out, the character of the people is changing for the worse in this respect, but also because it is at present more difficult to practise the arts of thrift than it was a generation or two ago.

When most of the goods that a family consumed were made by itself in the household, on the farm or in the small shop, the irksomeness of avoidable labor was a powerful motive making for economy. It was not in human nature to destroy wantonly, or by negligence, shoes, clothing, furniture and utensils that must be replaced, if replaced at all, by the labor of one's own hands.

With the introduction of manufacture

on a large scale, a different set of motives came into play. Producing for a market, the manufacturer desires a quick and steady demand, and he likes to have the stock of goods in use disappear as rapidly as possible. The same motives are felt by the middleman. The consumer is urged and tempted to replace the old with the new more frequently than he can afford.

Today, organization on a gigantic scale, with trusts and lesser combinations controlling production, jobbing and retailing, temptation to wastefulness has become a definite and increasing coercion. Without any actual conspiracy, the conduct of individuals and corporations often takes a form of joint action that has all the effect of conspiracy. Manufacturers and dealers, including all of the larger mercantile establishments in this practical sense, and presumably without any actual conspiracy in the legal sense, combine their efforts in a thousand effective ways to discourage thrift. Patterns, models, forms, colors, are changed with bewildering rapidity. It is increasingly difficult to match a piece of goods. When you have found a shoe or a hat that suits you you can no longer congratulate yourself upon having solved a problem of personal economy. The chances are that you can never again obtain exactly the same style of hat or the same "last" of shoe.

With this continual shifting of patterns goes a steady deterioration in the quality of all repair work. In all possible ways, manufacturers and dealers discourage the arts of repair. More often than not, they refuse to be "bothered" with repairs. If they reluctantly undertake them, they will return the articles to you looking perhaps "as good as new," but in reality, as you discover a few days later, irreparably ruined.

Probably there is only one practical way in which to check the increasing wastefulness of our present productive and distributive system. It is not likely that we shall again witness the encouragement of thrift until we resort to co-operation in some form. One large item in the economy of such schemes of distributive co-operation as those that flourish in England is the immediate and natural incentive to thrift which they once more bring into play. Thru them the consumer can get the kinds of goods that he wants in standard patterns, and need not replace them until he needs to do so. He can demand and secure articles that are well made. By a slight extension of the co-operative enterprise it would be easily possible to provide for prompt and well-made "repairs."

As we have said more than once before, the extravagance and wastefulness of the American people are not likely to diminish so long as it is possible to get rich quick by the method of skinning our natural resources, which has been worked "for all it is worth" since the Civil War period. It will be when we feel more keenly the pressure of diminishing returns that we shall begin to ask ourselves how we can economize our resources and our energies. It is highly probable that when that day comes we shall discover that the American people are as competent to organize and to carry on successful co-operation as the people of the countries of the Old World are.

Extradition and Insanity

It is bad enough that there is no effective treaty with Italy for the extradition of those charged with crime. In the present Charlton case the confest murderer is an American, altho the crime was committed in Italy, and Italy will not seek to have him extradited and tried there. But as he and his victim were Americans, and he is under arrest here, he can and should be tried here, so as not to escape proper punishment. That would be a great wrong. An effort by his relatives is making to show that he is insane, and was insane from childhood. We need a legal interpretation of insanity. The community is in great danger from the emotionally "insane," from those who have a high temper which they do not control, who are liable to seize the first mallet or knife handy to kill one they are angry with. The purpose of punishment for murder is not to reform the murderer, but to protect the people; and those whose minds are liable to go mad when angry should be restrained after, and it were better before, the murderous passion conquers reason. Most defenses of insanity are cases of expansion

beyond bounds of the definition of insanity. People who are sane enough to be allowed to go about in society are generally sane enough to be punished for their crimes, sane enough to be deterred by fear of punishment, sane enough to try to escape and hide their guilt, and are therefore sane enough to be punished.

Vanderbilt University

A most extraordinary contest has opened for the control of Vanderbilt University, which may well attract the attention of the country. It was started as a Southern Methodist college in Nashville under the control of several of the neighboring Conferences. Then the elder Vanderbilt gave it a large endowment, and it took his name, and has since received other benefactions from the family. Meanwhile its control was in a measure transferred to the General Conference of the Methodist Church South, the bishops of which had a right, as visitors, to be present and vote with the trustees, and it was claimed that they are trustees. Then five bishops were elected as trustees to represent the whole number, but this was resisted in the General Conference, on the claim that the Church, not the trustees, owns the university. This was the chief question before the late meeting of the General Conference, and three trustees for the university were then elected; but the trustees have refused to admit them. There is a legal contest now assured. Two bishops have resigned from the Board of Trustees, in protest against its action, while Bishop Hendrix, who supported the board, is to be tried for contumacy by a commission provided by the General Conference. It is a very bitter fight, Chancellor Kirkland and the majority of the Board of Trustees desiring an independent university which shall yet be related to the Church, while the General Conference and the minority of the board wish the Church to own and control it. We observe that in the action of the trustees refusing to accept the three trustees elected by the Conference, six clergymen and two laymen voted to admit them, while on the negative there were three clergymen and sixteen laymen. The property involved is about $3,000,000, and W. K. Vanderbilt is with Chancellor Kirkland and the trustees. Bishop Hoss, who leads the Conference party, says it will be no friendly suit before the courts.

Senator Lodge's Report

The Senate Committee's report on the high cost of living is notable for discarding two causes which have had much currency. One of these is the increased production of gold, and the other is the tariff. Taking the causes as a whole they come to this, that people want more things, and that they do not raise enough food, and what they do raise they hold for high prices. This explanation seems very inadequate. It is like saying that things cost more because they cost more. The first reason given is the increased cost of production by reason of higher land values and higher wages. But that is the problem itself, not its explanation. The report then adds, the increased demand for farm products and food. But enough is produced to go around. We do not go hungry. It is added that banking facilities, cold storage plants, etc., allow farmers and middlemen to hold back products for higher prices. True, but that rather equalizes prices for they have to be sold in the end or lost. The committee is very certain, as might be expected, that the tariff has had no appreciable effect, for the prices have continued to rise on products whose tariff rates were reduced. It is a world phenomenon, they say, and there has simply been a leveling of prices everywhere. But this does not explain why they are everywhere leveling up. The financiers' chief explanation is the increased production and consequent reduced value of gold, the one thing by which all other values are measured.

Not a Public Document

We have occasion to thank *America* for its courteous treatment of THE INDEPENDENT when discussing severely the use by Secretary Speer, of the Presbyterian Board of Foreign Missions, of a document printed some years ago in our columns, which purported to be a severe rebuke by the Vatican of the Archbishop of Santiago, Chile, for his extravagance. *America* properly denies that such a letter could be rightly called an "encyclical letter." A letter from Leo XIII to the Archbishop of Santiago is not a public

document *in se*. Equally the letter on Americanism to Cardinal Gibbons was not *in se* a public document. Had a Manning or Von Ketteler or Darboy been in Baltimore it would have been suppressed. If genuine, of which we know nothing at present, such a letter would hardly be preserved in the archives of Santiago. Few archbishops will file away such letters. The writer in *America* says:

"Every encyclical, or public document, issued by the Vatican, is published at once in official organs, and the more important in the leading Catholic papers of every land."

We are inclined to question this, even apart from the fact that this would seem not to have been a public document. Henry Georgism was condemned by Papal encyclical, sent to the American Episcopate under the bond of secrecy, and was never published. The Papal encyclical on Modernism was not published entirely in Germany. The paragraph requiring that there be appointed a vigilance committee in every diocese to discover and report on suspicious Modernism was stricken out. The other day, by order of Pius X, the encyclical on St. Charles Borromeo was not published in Germany. At the same time the evidence presented by *America* against the genuineness of the letter published in Santiago papers at the time is such as to require further evidence for its authenticity which we did not see denied at the time.

Simplified Spelling Abroad

Simplified spelling is moving the world over, and in more than one language. In England the Simplified Spelling Society has tackled the problem of simplification, and proposes to solve it in a more radical way than the American Simplified Spelling Board seems to venture. It is proposed by its leading members to come as near to phonetic spelling as possible with twenty-six letters, altho but twenty-four are available, as *x* is a double letter, and *c* (or *k*) is superfluous. The paucity of letters leads them to suggest combinations for some vowel sounds, just as we employ *th* for a single consonant sound. The movement has spread to South Africa and Australia, while the Canadians are helping our Simplified Spelling Board. Even in Germany, France and Spain, where extensive simplification has already been achieved, further progress is proposed. In Japan the Government proposes to use simplified spelling in the teaching of English; one scholar declares it is harder to learn to read English than to read Chinese. The last proposal of the sort that has come to our observation is from Constantinople, where the Young Turk Government, in the zeal for progress, is planning to adopt a measure of simplification for the Turkish language, which has been generally thought of as already phonetically written. This scheme harmonizes with the desire to purify the Turkish language of intruded Arabic words, and also to extend the knowledge of Turkish all over the Empire.

How people know we do not know, but they seem to know that Colonel Roosevelt when he meets Governor Hughes will ask him to decline the appointment he has already accepted to a seat in the United States Supreme Court, which appointment the Senate has confirmed. It is not clear to us that Colonel Roosevelt has the right to make that request of him just for the sake of helping the Republican party in New York. If nothing else will save the party it must be very badly off and a dose of defeat might do it good. If Governor Hughes is such a unique man he is just the sort of man needed for the Supreme bench, and the position is as important as that of the Governor even of the Empire State.

Old popular superstitions are being rudely attacked in many directions, and not least in those that relate to health. The distinguished British physician, Sir Frederick Treves, has been startling his countrymen by declaring that drafts never give a person a cold, that colds come from stuffy rooms; and other British physicians support his assertion. It has been a paradoxical belief that a wind out of doors is healthy, but a draft indoors is liable to be fatal. Equally a very few years ago it was believed that damp air was malarious, but now we know that damp air of itself is as healthy as dry air, and that it is the mosquitoes that make a swamp malarial.

Senator Gore, of Oklahoma, is to be thanked for his defense of the Indians of his State, to the limit of publishing in the Senate the humiliating fact that a man representing a $3,000,000 interest had tried to bribe him with an offer of $50,000. This act of the blind Senator's was not sensational, for he tried hard to get sure protection for the Indians who were likely to be robbed by privately telling the facts to one or two of his colleagues, and by fighting the steal bill in Senate and committee. As a last resort he told openly in the Senate of the attempt at bribery, and that was effective. The nearest case we recall at all like this was that of Senator Pomeroy, of Kansas.

Nothing could be more worthily bestowed than the degree of Master of Arts given by Yale to Miss Jane Addams, of the Chicago Hull House, which she has made, with twenty years of labor, the most influential and useful institution of the sort in the country. We are not sure but she deserves the degree of Doctor of Laws as much as Mr. J. J. Hill, who received at the same time that degree. Yale is a little slow in recognizing the rights of women to these distinctions, as this is the first time a woman has thus been honored by the university.

It is with his "warm approval" that Secretary MacVeagh transmits to Congress the petition of 16,086 employees of the executive departments in Washington, and 5,500 employees of the civil service in other cities, praying for the passage of a law to retire superannuated civil service employees on a pension. The more enterprising business establishments have such a retirement system, and it is time that the United States treated its soldiers of peace as well as its soldiers of war.

It was in an address at Lincoln University, one of the leading colleges for negro education in the country, that President Taft, who is a trustee of Hampton Institute, had a good word to say for the higher education:

"Add up the hundreds of thousands of dollars and find how small—how pitiably small—is the total of the capital invested in higher education as compared with the total number of the race, and you will learn that there is no need that our economic students should be sitting up nights worrying about giving the negro too much education."

Rural school contests are very popular in Wisconsin. The usual plan is to have first a contest in the single school, then of representatives of the schools of a township, and then of a county. The superintendents of 56 counties report 15 arithmetic contests, 25 corn and other grain contests, 14 in speaking, 20 in spelling, and only two athletic contests. The Wisconsin youth seem to have the sense of proportion.

Let the public understand that there is not one advertised medicine that is of the least use to cure tuberculosis, and yet poor dupes pay $15,000,000 a year for fake consumption cures. Whether they are nostrums sold at drug stores or "institutes" or receipts from advertising doctors who have a secret remedy, they are all frauds. There is nothing that does good except fresh air and wholesome food and rest.

It was no small sacrifice that President Taft made when he did not go to Yale Commencement to see his son graduate with the highest honors. We doubt not it was with a wrench of the heartstrings that he announced that he should stay in Washington to watch the passage by the Senate of the Postal Bank bill. What he lost was the satisfaction of parental pride; what he gained was the satisfaction of doing his duty to the country.

All international disputed questions in which the United States has an interest are rapidly being submitted to arbitration. The last is that with Mexico as to a disputed bit of land in El Paso, Texas, worth about $5,000,000. The arbitrators are one American, one Mexican and one Canadian jurist. In old days nations have gone to war for smaller causes.

Goldwin Smith was a fortunate man to have a million dollars to leave to Cornell University, and a wise man he was to love to work to the end of his life. No act of his becomes him more than this splendid bequest.

INSURANCE

Reformation of Fraternals

THE conviction that the rates for fraternal insurance were altogether inadequate has been a growing one for several years. The matter has been agitated in many quarters and much controversy has resulted regarding this subject. A settlement of it seems now to be in sight as the result of a conference, held two weeks ago, between a committee of the National Convention of Insurance Commissioners and representatives of the leading fraternal organizations, as to legislation, the effect of which will ultimately be to place these organizations on a satisfactory financial basis. Previous attempts to bring about a revision of the rates of fraternals have not been successful, so that the present agreement is a matter of congratulation. The plan and scope of the proposed changes is indicated by the following synopsis:

That annual valuations and publicity shall be made not as a test of solvency but to show condition to members of societies, the valuation to begin January 1, 1912.

Valuation as of January 1, 1918, properly certified, shall be submitted to the home insurance department of the various orders and triennially thereafter. If the valuation shows a deficiency the society must reduce the deficiency at least 5 per cent. during each triennial period. Failure to reduce the deficiency will permit the insurance department to take steps to correct conditions or to wind up the business of the society.

The National Fraternal Congress tables of mortality shall be the standard for valuation of any higher standard upon which the societies have calculated their rates of contribution.

After the passage of the bill no new society shall be incorporated or admitted which does not provide for stated periodical contributions sufficient to provide for meeting the obligations contracted when valued upon the basis of the National Fraternal Congress tables of mortality, or any higher standard, with an interest assumption not more than 4 per cent. annually.

The chief effect of these amendments will be to extend the period during which the fraternals must place their business on a sound footing. Under the compromise which has been arrived at, the fraternals will not be required to begin to make good any reserve deficiency till 1918, and then not more than 5 per cent. to the deficiency every year. But even this advance is enormous, and the publicity which will be given to their condition in the meantime will help along the reform.

THE recent death of Charles C. Dickinson, former president of the Carnegie Trust Company, has caused considerable controversy as to its cause. Last week a coroner's jury brought in a verdict of accidental death, notwithstanding the introduction of testimony by the coroner's physician that Mr. Dickinson's death was not due to breathing poisonous gases while he was watching an alchemic experiment, as claimed. This verdict will validate a claim against the Casualty Company of America for the $50,000 policy the dead banker held with that company, which, with accumulations, now amounts to $62,500, in favor of his estate.

THE average man is in receipt of some kind of an income. So long as the man has his health this income is, generally speaking, assured to him. Out of it he pays his house rent, his living expenses, the cost of the clothes he wears, the books and papers he reads, and any luxuries in which he may indulge. Let us suppose that this man falls sick. The concern employing him very often pays his wages or salary, as the case may be, for a limited time, but if his disability continues permanently, the question as to where the money is to come from to pay his expenses becomes an exceedingly important one. How shall such a man keep a shelter over his head, buy food and secure the necessary clothes to wear? In this uncertain world, it is always possible that accidents may happen and income cut off. It is, therefore, exceedingly important for the wise man to find a way to meet the difficulties that straightway arise when the income ceases. Modern insurance methods provide a disability policy that is intended for just such emergencies. Those who have not considered this question before may find it exceedingly beneficial to make inquiries regarding such policies. They are good for the man as well as his family.

FINANCIAL

The Stock Market

DURING last week the market for securities showed continued dullness, transactions on the New York Stock Exchange amounting to only 2,280,300 shares. There was a downward tendency, but net losses at the end of the week were small. Discouraging news about the spring wheat crop, with rising prices for wheat, exerted a depressing influence. In the last two days of the week the address of Attorney-General Wickersham at Chicago, in defense of the Federal Government's power to control and regulate issues of railroad stock and bonds, was used by bear traders in applying pressure to prices. They argued that it indicated the Administration's purpose to insist hereafter upon a grant of authority to exercise this power. It was not shown, however, that the proposed regulation of issues would reduce the actual value of securities. The reported decision of the great packing companies in Chicago not to oppose an increase of freight rates affected the market slightly for a time. It was reported that the packers had been induced by George W. Perkins (of J. P. Morgan & Co.) to accept an average addition of 11 per cent., or about $2,500,000 a year, on East bound shipments of meats. This break in the ranks of the protesting shippers, some thought, would help the railroads with the Interstate Commerce Commission. Others realized, however, that the packers would proceed to collect the additional $2,500,000 from the consuming public in higher prices of meat, and that the packers' "compromise" would not commend either the Beef Trust or the railroads to the people. Public sentiment has weight in stock exchanges and where laws are made. On the whole, stock market prices have not been seriously affected by the packers' action.

Young Financiers

THOMAS F. RYAN, the well known capitalist, identified with the Tobacco Trust, prominent banks, insurance companies, gas companies, etc., sailed for Europe last week, intending to visit the Kongo country, in the industrial development of which he is interested. On the day of his departure he gave to the press a prepared statement. The following part of it, relating to Mr. Morgan and several young men, has excited some interest:

"I regret very much that I shall not see Mr. Morgan during the present summer, as I am compelled to leave before he can arrive. My interest in his activities continues to be keen, and I do not fail to recognize the unique position that he holds in the business situation not only of this country but of the world. There are people who are asking who is to be the successor of Mr. Morgan. In my opinion there will be none. There has been only one Morgan and there cannot be a second. Fortunately, there seems to be no reason to become alarmed on this point for years to come. As for the men to whom the interests of New York and the country must look in time of panic or peril in the next generation there is no occasion to go beyond the younger men now in sight. I have perfect confidence in them, I firmly believe that such men as Messrs. J. Pierpont Morgan, Jr., and Henry P. Davison, of the firm of J. Pierpont Morgan & Co., Otto H. Kahn and Mortimer L. Schiff, of Kuhn, Loeb & Co., Mr. John B. Dennis, of Blair & Co., Mr. George F. Baker, Jr., of the First National Bank, and James Stillman, Jr., of the National City Bank, may be relied upon to take care of the great banking and financial interests which lie at the foundation of American business. I look upon these as the ablest men of their time in any of the great financial centers."

Four of the seven younger men named above are more than forty years old Two are forty-three. George W. Perkins, one of the most active of Mr. Morgan's partners, but not mentioned by Mr. Ryan, is forty-eight. The elder Morgan is seventy-three years old, and Mr. Ryan himself will be fifty-nine in October next.

....In the year ending with March, $2,387,969 was taken at the New York Custom House in fines, penalties and forfeitures, against $106,406 in the year immediately preceding.

....With its regular quarterly dividend of 25 per cent., the Fifth Avenue Bank declared last week a special dividend of 130 per cent. The bank retains its old capitalization of only $100,000. Shares (par value $100) were recently sold at $4,500.
